The schematic diagram illustrates the internal circuitry of a portable television receiver, Model G199DCS-A989-H. The circuit is centered around two integrated circuits: IC201 (TMA 5933-4) and IC202 (TMA 121). Key components and connections include:

- VCR-SWITCH:** Controls the input signal path.
- IF IN / IF GND:** Intermediate Frequency input and ground connections.
- TUNER AGC:** Automatic Gain Control for the tuner section.
- IC201 (TMA 5933-4):** The main tuning and processing IC, with pins 1 through 18 labeled.
- IC202 (TMA 121):** The audio and video processing IC, with pins 1 through 15 labeled.
- Output Stages:**
  - CCVS OUT:** Composite Color Video Signal output.
  - VIDEO IN / VIDEO OUT:** Video input and output connections.
  - AF IN / AF OUT:** Audio Frequency input and output connections.
  - VOLUME:** Volume control output.
  - MUTE:** Mute signal output.
- DEM. Section:** A dedicated section for the 38.9MHz G199DCS-A989-H chip, including a 47pF capacitor and a 120k resistor.
- Power and Grounding:** Multiple +12V and GND connections are shown throughout the circuit.
