CAUTION: Before servicing this chassis, it is important that the service technician read the "Safety Precaution" and "Product Safety Notices" in this Service Manual.

SAFETY NOTICE

USE ISOLATION TRANSFORMER WHEN SERVICING

Components having special safety characteristics are identified by a Δ on the schematics and on the parts list in this Service Data and its supplements and bulletins. Before servicing the chassis, it is important that the service technician read and follow the "Safety Precautions" and "Product Safety Notices" in this Service Manual.

*For continued x-radiation protection, replace picture tube with original type of Hitachi approved equivalent type.

SPECIFICATIONS AND PARTS ARE SUBJECT TO CHANGE FOR IMPROVEMENT

PROJECTION COLOR TELEVISION

September 1995

HHEA - MANUFACTURING DIVISION

This service manual is intended for qualified service technicians; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual.

Improperly performed repairs can adversely affect the safety and reliability of the product and may void warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

WARNING

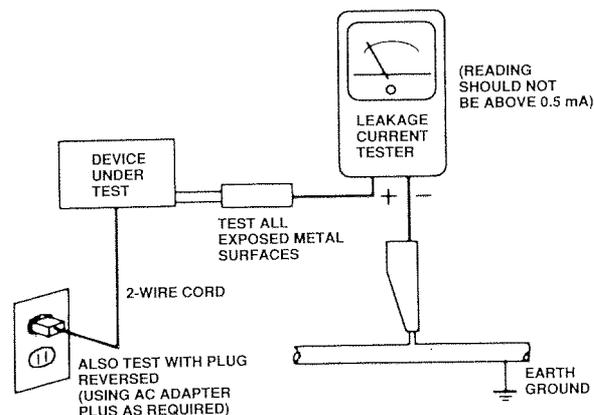

Lead in solder used in this product is listed by the California Health and Welfare agency as a known reproductive toxicant which may cause birth defects or other reproductive harm (California Health and Safety Code, Section 25249.5).

When servicing or handling circuit boards and other components which contain lead in solder, avoid unprotected skin contact with solder. Also, when soldering do not inhale any smoke or fumes produced.

This television receiver provides display of television closed captioning in accordance with section 5.119 of the FCC rules.

SAFETY PRECAUTIONS

1. Before returning an instrument to the customer, always make a safety check of the entire instrument, including but not limited to the following items:
 - a. Be sure that no built-in protective devices are defective and/or have been deleted during servicing. (1) Protective shields are provided on this chassis to protect both the technician and the customer. Correctly replace all missing protective shields, including any removed for servicing convenience. (2) When reinstalling the chassis and/or other assembly in the cabinet, be sure to put back in place all protective devices, including but not limited to, nonmetallic control knobs, insulating fishpapers, adjustment and compartment covers/shields, and isolation resistor/capacitor networks. **Do not operate this instrument or permit it to be operated without all protective devices correctly installed and functioning. Servicers who defeat safety features or fail to perform safety checks may be liable for any resulting damage.**
 - b. Be sure that there are no cabinet openings through which an adult or child might be able to insert their fingers and contact a hazardous voltage. Such openings include, but are not limited to (1) spacing between the picture tube and cabinet mask, (2) excessively wide cabinet ventilation slots, and (3) an improperly fitted and/or incorrectly secured cabinet back cover.
 - c. **Antenna Cold Check** — With the instrument AC plug removed from any AC source, connect an electrical jumper across the two AC plug prongs. Place the instrument AC switch in the on position. Connect one lead of an ohmmeter to the AC plug prongs tied together and touch the other ohmmeter lead in turn to each tuner antenna input exposed terminal screw and, if applicable, to the coaxial connector. If the measured resistance is less than 1.0 megohms or greater than 5.2 megohms, an abnormality exists that must be corrected before the instrument is returned to the customer. Repeat this test with the instrument AC switch in the off position.
 - d. **Leakage Current Hot Check** — With the instrument completely reassembled, plug the AC line cord directly into a 120V AC outlet. (Do not use an isolation transformer during this test.) Use a leakage current tester or a metering system that complies with American National Standards Institute (ANSI) C101.0 Leakage Current for Appliances and Underwriters Laboratories (UL) 1410, (50.7). With the instrument AC switch first in the on position and then in the off position, measure from a known earth ground (metal waterpipe, conduit, etc.) to all exposed metal parts of the instrument (antennas, handle bracket, metal cabinet, screw heads, metallic overlays, control shafts, etc.), especially any exposed metal parts that offer an electrical return path to the chassis. Any current measured must not exceed 0.1 milliamperes. Reverse the instrument power cord plug in the outlet and repeat test.

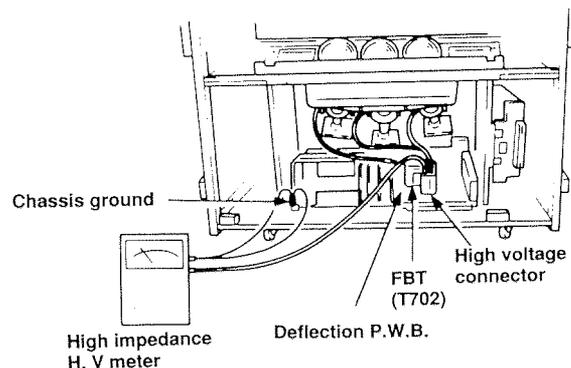

AC Leakage Test

ANY MEASUREMENTS NOT WITHIN THE LIMITS SPECIFIED HEREIN INDICATE A POTENTIAL SHOCK HAZARD THAT MUST BE ELIMINATED BEFORE RETURNING THE INSTRUMENT TO THE CUSTOMER OR BEFORE CONNECTING THE ANTENNA OR ACCESSORIES.

- e. **High Voltage** — This receiver is provided with a hold down circuit for clearly indicating that voltage has increased in excess of a predetermined value. Comply with all notes described in this Service Manual regarding this hold down circuit when servicing, so that this hold down circuit may correctly be operated.
- f. **Serviceman Warning** — With minimum contrast and brightness, operating high voltage in this receiver is lower than **31.6kV**. In case any component having influence on high voltage is replaced, confirm that high voltage with minimum contrast and brightness is lower than **31.6kV**. To measure H.V. use a high impedance H.V. meter. Connect (-) to chassis earth and (+) to the CRT anode button. (See the following connection diagram.)

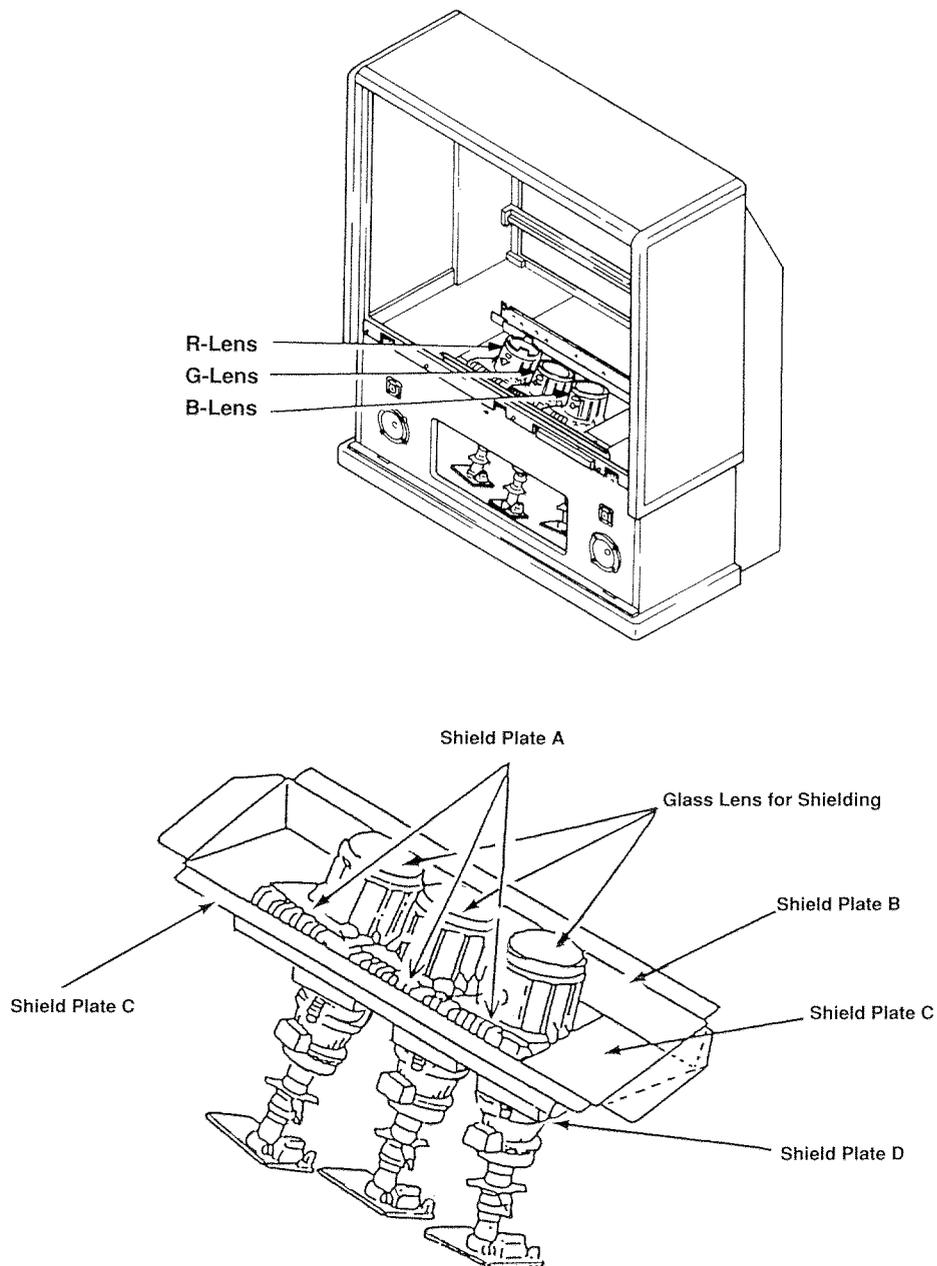

Note: Turn power switch off without fail before the connection to the anode button is made.

g. **X-radiation — TUBE:** The primary source of X radiation in this receiver is the picture tube. The tube utilized for the above mentioned function in this chassis is specially constructed to limit X radiation emissions. For continued X radiation protection, the replacement tube must be the same type as the original, HITACHI approved type. When troubleshooting and making test measurements in a receiver with a problem of excessive high voltage, avoid being unnecessarily close to the picture tube and the high voltage component. Do not operate the chassis longer than is necessary to locate the cause of excessive voltage.

h. **X-Radiation Shield —**

- 1) This receiver is provided X-ray shield plates for the protection of X-radiation. Do not remove X-ray shield plates A, B, C, or D shown in Fig. 1 unnecessarily, when troubleshooting and/or making test measurements.
- 2) To prevent X-radiation, after replacement of picture tube and lens, confirm these components to be fixed correctly to bracket and cabinet, and not to be taken off easily.

Detailing X-radiation shield.

Fig. 1

2. Read and comply with all caution and safety-related notes on or inside the receiver cabinet, on the receiver chassis, or on the picture tube.
3. **Design Alteration Warning** — Do not alter or add to the mechanical or electrical design of this TV receiver. Design alterations and additions, including but not limited to, circuit modifications and the addition of items such as auxiliary audio and/or video output connectors, might alter the safety characteristics of this receiver and create a hazard to the user. Any design alterations or additions may void the manufacturer's warranty and may make you, the servicer, responsible for personal injury or property damage resulting therefrom.
4. **Picture Tube Implosion Protection Warning** — The picture tube in this receiver employs integral implosion protection. For continued implosion protection, replace the picture tube only with one of the same type number. Do not remove, install, or otherwise handle the picture tube in any manner without first putting on shatterproof goggles equipped with side shields. People not so equipped must be kept safely away while picture tubes are handled. Keep the picture tube away from your body. Do not handle the picture tube by its neck.
5. **Hot Chassis Warning** — **a.** Some TV receiver chassis are electrically connected directly to one conductor of the AC power cord and may be safely serviced without an isolation transformer only if the AC power plug is inserted so that the chassis is connected to the ground side of the AC power source. To confirm that the AC power plug is inserted correctly, with an AC voltmeter measure between the chassis and a known earth ground. If a voltage reading in excess of 1.0V is obtained, remove and reinsert the AC power plug in the opposite polarity and again measure the voltage potential between the chassis and a known earth ground. **b.** Some TV receiver chassis normally have 85V AC (RMS) between chassis and earth ground regardless of the AC plug polarity. These chassis can be safely serviced only with an isolation transformer inserted in the power line between the receiver and the AC power source, for both personnel and test equipment protection. **c.** Some TV receiver chassis have a secondary ground system in addition to the main chassis ground. This secondary ground system is not isolated from the AC power line. The two ground systems are electrically separated by insulating material that must not be defeated or altered.
6. Observe original lead dress. Take extra care to assure correct lead dress in the following areas: **a.** near sharp edges, **b.** near thermally hot parts — be sure that leads and components do not touch thermally hot parts, **c.** the AC supply, **d.** high voltage and **e.** antenna wiring. Always inspect in all areas for pinched, out-of-plate, or frayed wiring. Do not change spacing between components, and between components and the printed circuit board. Check AC power cord for damage.
7. Components, parts, and/or wiring that appear to have overheated or are otherwise damaged should be replaced with components, parts, or wiring that meet original specifications. Additionally, determine the cause of overheating and/or damage and, if necessary, take corrective action to remove any potential safety hazard.
8. **PRODUCT SAFETY NOTICE** — Many TV electrical and mechanical parts have special safety-related characteristics some of which are often not evident from visual inspection, nor can the protection they give necessarily be obtained by replacing them with components rated for higher voltage, wattage, etc. Parts that have special safety characteristics are identified Hitachi service data by shading on schematics and by a () in the parts list. Use of a substitute replacement that does not have the same safety characteristics as the recommended replacement part in Hitachi service data parts list might create shock, fire, and/or other hazards. Product safety is under review continuously and new instructions are issued whenever appropriate. For the latest information, always consult the appropriate current Hitachi service literature. A subscription to, or additional copies of Service literature may be obtained at a nominal charge from Hitachi.

SERVICING PRECAUTIONS

CAUTION: Before servicing instruments covered by this service data and its supplements and addenda, read and follow the SAFETY PRECAUTIONS on page 3 of this publication.

NOTE: If unforeseen circumstances create conflict between the following servicing precautions and any of the safety precautions on page 3 of this publication, always follow the safety precautions. Remember: Safety First.

General Servicing Guidelines

1. Always unplug the instrument AC power cord from the AC power source before:
 - a. Removing or reinstalling any component, circuit board, module, or any other instrument assembly.
 - b. Disconnecting or reconnecting any instrument electrical plug or other electrical connection.
 - c. Connecting a test substitute in parallel with an electrolytic capacitor in the instrument.

Caution: A wrong part substitution or incorrect polarity installation of electrolytic capacitors may result in an explosion hazard.
 - d. Discharging the picture tube anode.
2. Test high voltage only by measuring it with an appropriate high voltage meter or other voltage measuring device (DVM, FETVOM, etc.) equipped with a suitable high voltage probe. Do not test high voltage by "drawing an arc." The H.V. Distribution Box has an internal 400M Ω resistor (bleeder resistor) connected from the high voltage to ground. After power is removed from the instrument the high voltage will discharge through the high voltage bleeder resistor. If the tubes have high voltage after power is removed, then the bleeder resistor is defective or the bleeder ground is disconnected.
3. Discharge the picture tube's anode at any of the R, G, or B outputs on the High Voltage distribution box only by (a) first connecting one end of an insulated clip lead to the degaussing or kine aquadag grounding system shield at the point where the picture tube socket ground lead is connected, and then (b) touch the other end of the insulated clip lead to the picture tube high voltage distribution box R, G, or B output, using an insulating handle to avoid personal contact with high voltage.
4. Do not spray chemical on or near this instrument or any of its assemblies.
5. Unless specified otherwise in these service data, clean electrical contacts by applying the following mixture to the contacts with a pipe cleaner, cotton-tipped stick or comparable nonabrasive applicator: 10% (by volume) Acetone and 90% (by volume) isopropyl alcohol (90%-99% strength). **Caution:** This is a flammable mixture. Unless specified otherwise in these service data, lubrication of contacts is not required.
6. Do not defeat any plug/socket B+ voltage interlocks with which instruments covered by this service data might be equipped.

7. Do not apply AC power to this instrument and/or any of its electrical assemblies unless all solid-state device heat sinks are correctly installed.
8. Always connect the test instrument ground lead to the appropriate instrument chassis ground before connecting the test instrument positive lead. Always remove the test instrument ground lead last.
9. Use with this instrument only the test fixtures specified in this service data.

CAUTION: Do not connect the test fixture ground strap to any heatsink in this instrument.

Electrostatically Sensitive (ES) Devices

Some semiconductor (solid state) devices can be damaged easily by static electricity. Such components commonly are called Electrostatically Sensitive (ES) Devices. Examples of typical ES devices are integrated circuits and some field-effect transistors and semiconductor "chip" components. The following techniques should be used to help reduce the incidence of component damage caused by static electricity.

1. Immediately before handling any semiconductor component or semiconductor-equipped assembly, drain off any electrostatic charge on your body by touching a known earth ground. Alternatively, obtain and wear a commercially available discharging wrist strap device, which should be removed for potential shock reasons prior to applying power to the unit under test.
2. After removing an electrical assembly equipped with ES devices, place the assembly on a conductive surface such as aluminum foil, to prevent electrostatic charge buildup or exposure of the assembly.
3. Use only a grounded-tip soldering iron to solder or unsolder ES devices.
4. Use only an anti-static type solder removal device. Some solder removal devices not classified as "anti-static" can generate electrical charges sufficient to damage ES devices.
5. Do not use freon-propelled chemicals. These can generate electrical charges sufficient to damage ES devices.
6. Do not remove a replacement ES device from its protective package until immediately before you are ready to install it. (Most replacement ES devices are packaged with leads electrically shorted together by conductive foam, aluminum foil or comparable conductive material.)
7. Immediately before removing the protective material from the leads of a replacement ES device, touch the protective material to the chassis or circuit assembly into which the device will be installed.

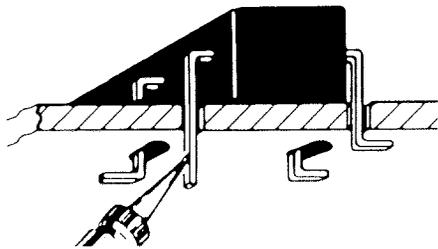

CAUTION: Be sure no power is applied to the chassis or circuit, and observe all other safety precautions.
8. Minimize bodily motions when handling unpackaged replacement ES devices. (Otherwise harmless motion such as the brushing together of your clothes fabric or the lifting of your foot from a carpeted floor can generate static electricity sufficient to damage an ES device.)

General Soldering Guidelines

1. Use a grounded-tip, low-wattage soldering iron and appropriate tip size and shape that will maintain tip temperature within the range 500°F to 600°F.
2. Use an appropriate gauge of resin-core solder composed of 60 parts tin/40 parts lead.
3. Keep the soldering iron tip clean and well tinned.
4. Thoroughly clean the surfaces to be soldered. Use a small wire-bristle (0.5 inch or 1.25 cm) brush with a metal handle. Do not use freon-propelled spray-on cleaners.
5. Use the following unsoldering technique.
 - a. Allow the soldering iron tip to reach normal temperature (500°F to 600°F).
 - b. Heat the component lead until the solder melts. Quickly draw away the melted solder with an anti-static, suction-type solder removal device or with solder braid.

CAUTION: Work quickly to avoid overheating the circuit board printed foil.
6. Use the following soldering technique.
 - a. Allow the soldering iron tip to reach normal temperature (500°F to 600°F).
 - b. First, hold the soldering iron tip and solder strand against the component lead until the solder melts.
 - c. Quickly move the soldering iron tip to the junction of the component lead and the printed circuit foil, and hold it there only until the solder flows onto and around both the component lead and the foil.

CAUTION: Work quickly to avoid overheating the circuit board printed foil or components.
- d. Closely inspect the solder area and remove any excess or splashed solder with a small wire-bristle brush.

Use Soldering Iron to Pry Leads

IC Removal/Replacement

Some Hitachi unitized chassis circuit boards have slotted holes (oblong) through which the IC leads are inserted and then bent flat against the circuit foil. When holes are the slotted type, the following technique should be used to remove and replace the IC. When working with boards using the familiar round hole, use the standard technique as outlined in paragraphs 5 and 6 above.

Removal

1. Desolder and straighten each IC lead in one operation by gently prying up on the lead with the soldering iron tip as the solder melts.
2. Draw away the melted solder with an anti-static suction-type solder removal device (or with solder braid) before removing the IC.

Replacement

1. Carefully insert the replacement IC in the circuit board.
2. Carefully bend each IC lead against the circuit foil pad and solder it.
3. Clean the soldered areas with a small wire-bristle brush. (It is not necessary to reapply acrylic coating to the areas.)

“Small-signal” Discrete Transistor Removal/Replacement

1. Remove the defective transistor by clipping its leads as close as possible to the component body.
2. Bend into a “U” shape the end of each of three leads remaining on the circuit board.
3. Bend into a “U” shape the replacement transistor leads.
4. Connect the replacement transistor leads to the corresponding leads extending from the circuit board and crimp the “U” with long nose pliers to insure metal to metal contact, then solder each connection.

Power Output Transistor Devices Removal/Replacement

1. Heat and remove all solder from around the transistor leads.
2. Remove the heatsink mounting screw (if so equipped).
3. Carefully remove the transistor from the circuit board.
4. Insert new transistor in circuit board.
5. Solder each transistor lead, and clip off excess lead.
6. Replace heatsink.

Diode Removal/Replacement

1. Remove defective diode by clipping its leads as close as possible to diode body.
2. Bend the two remaining leads perpendicularly to the circuit board.
3. Observing diode polarity, wrap each lead out of the new diode around the corresponding lead on the circuit board.
4. Securely crimp each connection and solder it.
5. Inspect (on the circuit board copper side) the solder joints of the two “original” leads. If they are not shiny, reheat them and, if necessary, apply additional solder.

Fuses and Conventional Resistor Removal/Replacement

1. Clip each fuse or resistor lead at top of circuit board hollow stake.
2. Securely crimp leads of replacement component around stake 1/8 inch from top.
3. Solder the connections.

CAUTION: Maintain original spacing between the replaced component and adjacent components and the circuit board, to prevent excessive component temperatures.

Circuit Board Foil Repair

Excessive heat applied to the copper foil of any printed circuit board will weaken the adhesive that bonds the foil to the circuit board, causing the foil to separate from, or "lift-off," the board. The following guidelines and procedures should be followed whenever this condition is encountered.

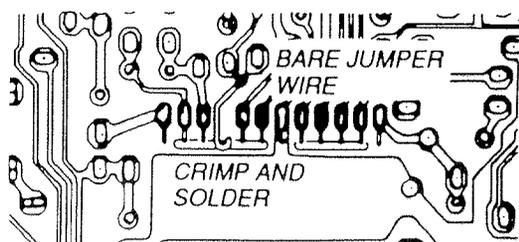

In Critical Copper Pattern Areas

High component/copper pattern density and/or special voltage/current characteristics make the spacing and integrity of copper pattern in some circuit board areas more critical than in others. The circuit foil in these areas is designated as Critical Copper Pattern and is identified and illustrated in this service data in the section titled Safety Related Copper Pattern (see data in the section titled Safety Related Copper Pattern (see table of contents for page number). Because Critical Copper Pattern requires special soldering techniques to ensure the maintenance of reliability and safety standards, contact your Hitachi personnel.

At IC Connections

To repair defective copper pattern at IC connections, use the following procedure to install a jumper wire on the copper pattern side of the circuit board. (Use this technique only on IC connections.)

1. Carefully remove the damaged copper pattern with a sharp knife. (Remove only as much copper as absolutely necessary.)
2. Carefully scratch away the solder resist and acrylic coating (if used) from the end of the remaining copper pattern.

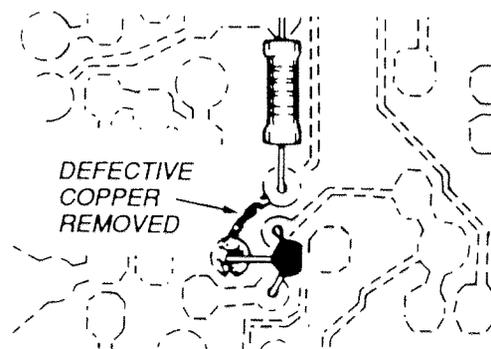

Install Jumper Wire and Solder

3. Bend a small "U" in one end of a small-gauge jumper wire and carefully crimp it around the IC pin. Solder the IC connection.

4. Route the jumper wire along the path of the cut-away copper pattern and let it overlap the previously scraped end of the good copper pattern. Solder the overlapped area, and clip off any excess jumper wire.

At Other connections

Use the following technique to repair defective copper pattern at connections other than IC Pins. This technique involves the installation of a jumper wire on the component side of the circuit board.

Insulated Jumper Wire

1. Remove the defective copper pattern with a sharp knife. Remove at least 1/4 inch of copper, to ensure that a hazardous condition will not exist if the jumper wire opens.
2. Trace along the copper pattern from both sides of the pattern break and locate the nearest component that is directly connected to the affected copper pattern.
3. Connect insulated 20-gauge jumper wire from the lead of the nearest component on one side of the pattern break to the lead of the nearest component on the other side. Carefully crimp and solder the connections.

CAUTION: Be sure the insulated jumper wire is dressed so that it does not touch components or sharp edges.

Frequency Synthesis (FS) Tuning Systems

1. Always unplug the instrument AC power cord before disconnecting or reconnecting FS tuning system cables and before removing or inserting FS tuning system modules.
2. The FS tuner must never be disconnected from the FS tuning control module while power is applied to the instrument.
3. When troubleshooting intermittent problems that might be caused by defective cable connection(s) to the FS tuning system, remove the instrument AC power as soon as the defective connector is found and finish confirming the bad connection with a continuity test. This procedure will reduce the probability of electrical overstress of the FS system semi-conductor components.

TECHNICAL CAUTIONS

High Voltage limiter circuit operation check.

1. Turn off TV and connect jig as shown in Figure 2. Adjust jig fully counter-clockwise for minimum resistance.
2. Set the AC input to 120V AC and turn on TV.
3. Confirm test pattern on CRT is a usable picture, then slowly adjust jig until the picture disappears and TV shuts down.
4. When the limiter circuit is operating properly, High Voltage will be less than 35.5kV at 0.6mA when TV shuts down.
5. Turn off set immediately after checking circuit operation.
6. Unplug set for one minute to reset shutdown circuit. Remove jig and voltmeter.

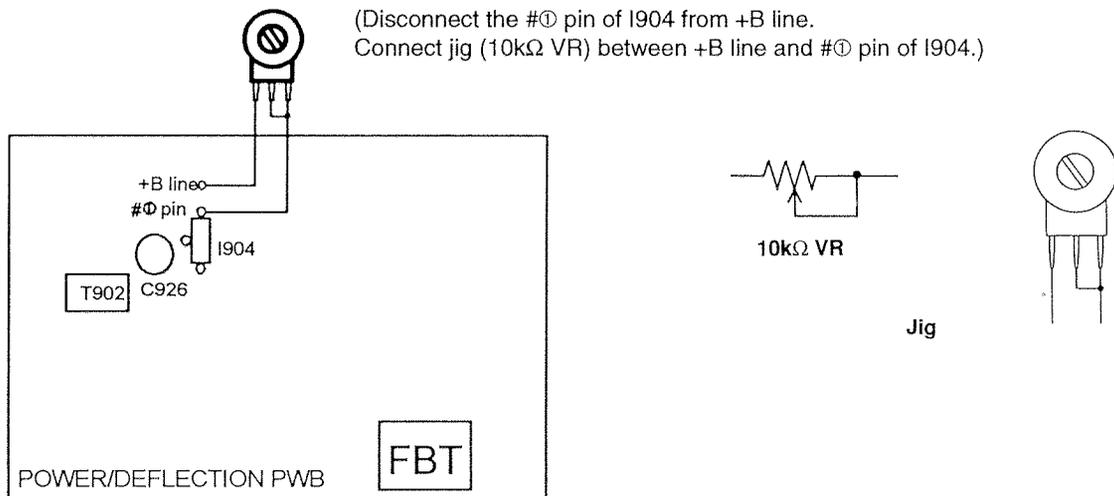

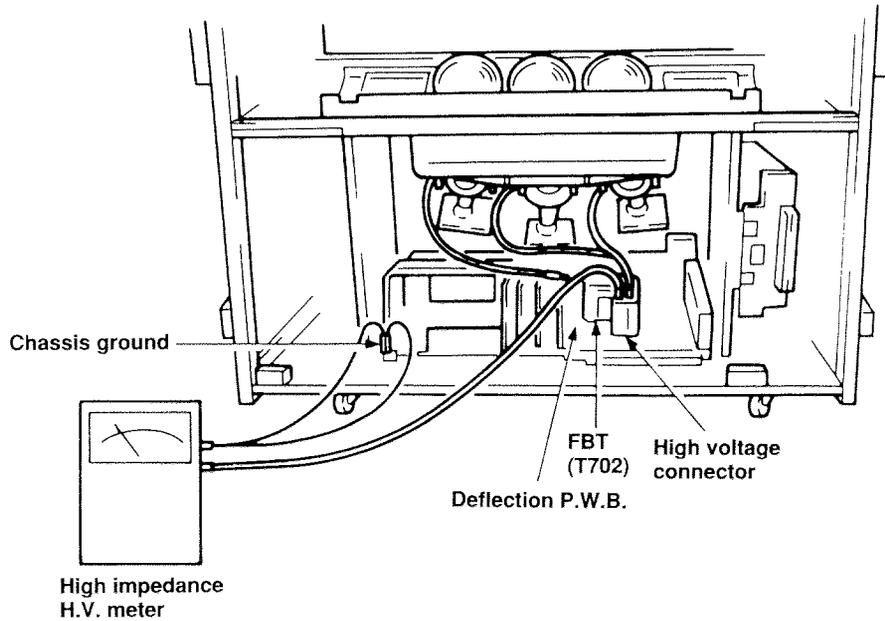

Fig. 2 Deflection/Power Supply P.C.B.

Fig. 4

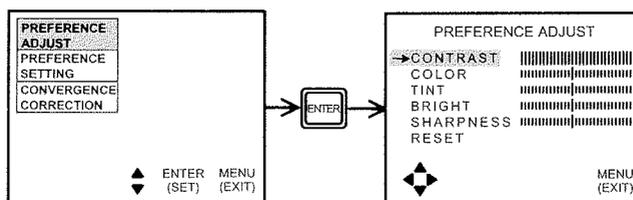

ADJUSTING FOR PICTURE AND SOUND FUNCTIONS

Select VIDEO to adjust picture settings, improve picture quality, and to adjust convergence.

Use this feature to adjust contrast, color, tint, brightness, and sharpness.

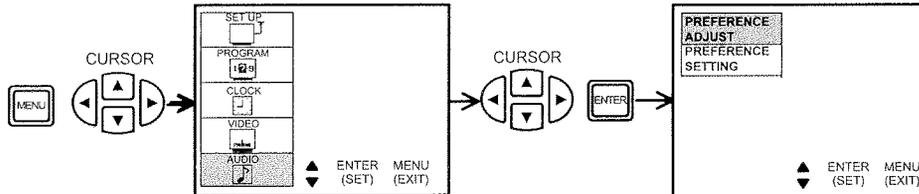

Press the CURSOR buttons to select and make adjustments.
The function to be adjusted will be in yellow.

- CONTRAST** — Use this function to change the contrast between black and white level in the picture. This adjustment will only affect the picture when the PICTURE SETTING AI is OFF.
- COLOR** — Use this function to adjust the level of color in the picture.
- TINT** — Use this function to adjust flesh tones so they appear natural.
- BRIGHT** — Use this function to adjust overall picture brightness.
- SHARPNESS** — Use this function to adjust the amount of fine detail in the picture.
- RESET** — When RESET is selected, press ENTER to return video adjustments to factory preset conditions.

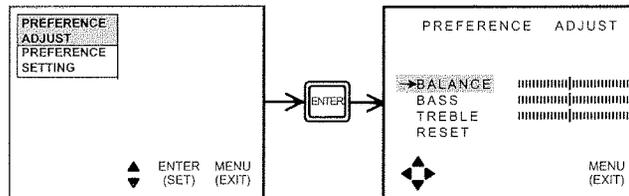

Select AUDIO to adjust the TV to your preference, to improve the sound quality, and to select special sound effects.

PREFERENCE ADJUSTMENT

Use this to set balance, bass, and treble.

Press the CURSOR buttons to select and make adjustments.
The function to be adjusted will be in yellow.

- BALANCE** — This function will control the left to right balance of the TV internal speakers, the AUDIO TO HI-FI output, and the Surround speakers.
- BASS** — This function controls the low frequency audio to all speakers.
- TREBLE** — This function controls the high frequency audio to all speakers.
- RESET** — When RESET is selected, press ENTER to return audio adjustments to factory preset conditions.

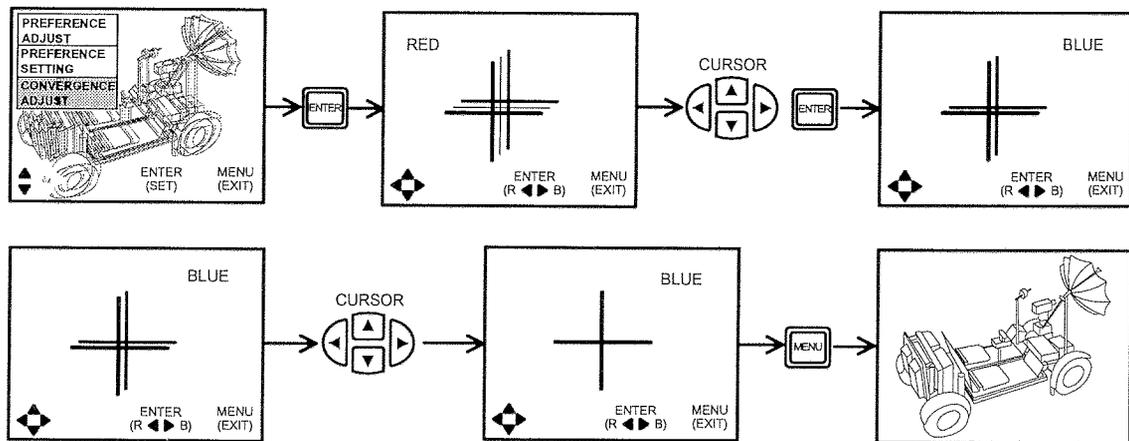

SELF CHECK REPAIR CODES

Press the AVX and POWER buttons on the control panel at the same time.

| CODE | DETECTION CONTENTS | DETECTION TIME | REMARK |
|------|------------------------------|------------------------|---|
| 40 | Abnormal deflection circuit | --- | --- |
| 41 | Abnormal + B line | --- | --- |
| 42 | Abnormal convergence circuit | --- | --- |
| 10 | Check for PLL lock | Not locked in 2 sec. | During selection time |
| 11 | Check for AFC operation | Not finished in 2 sec. | During selection time |
| 60 | Check for AC input | At uP reset time | AC input (50/60Hz) not detected at reset time |
| 31 | Check I001 operation | At uP reset time | Check for out of range operation |
| 43 | Abnormal signal circuit | --- | --- |

Note: Code 10 or 11 may appear if TV is turned on without an antenna source connected.

CONVERGENCE ADJUST

Press the CURSOR ▲, ▼ to move the color displayed up or down.
 Press the CURSOR ◀, ▶ to move the color displayed left or right.
 Press ENTER to change the color.
 Press MENU to exit.

CAUTIONS WHEN CONNECTING/DISCONNECTING THE HV CONNECTOR

Perform the following when the HV connector (anode connector) is removed or inserted for CPT replacement, etc.

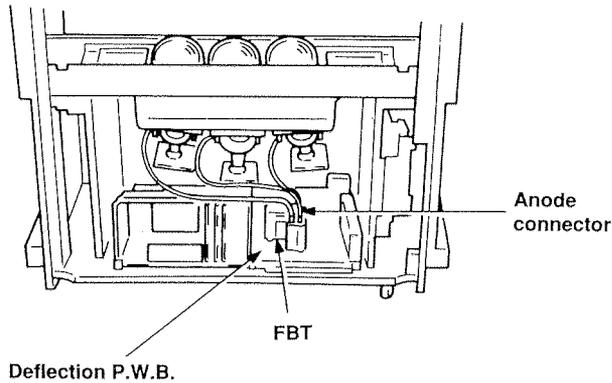

Fig. 5

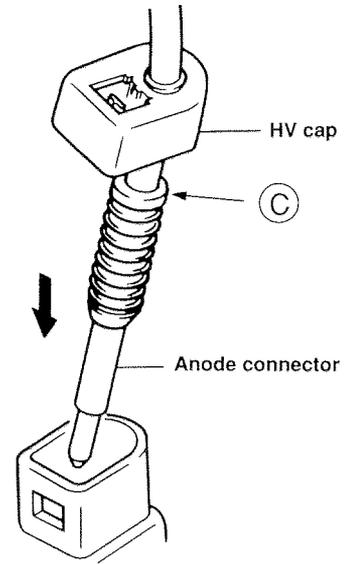

Fig. 7

During Removal

1. Insert a small flat-bladed screwdriver (adjustment screwdriver: 5-7 mm wide and 0.2-0.3 mm thick) into section (A) in Fig. 6 and then push it in the direction of arrow (B). The lock will release with a click. (The state in Fig. 8 (1) will change to that in Fig. 8 (2).)

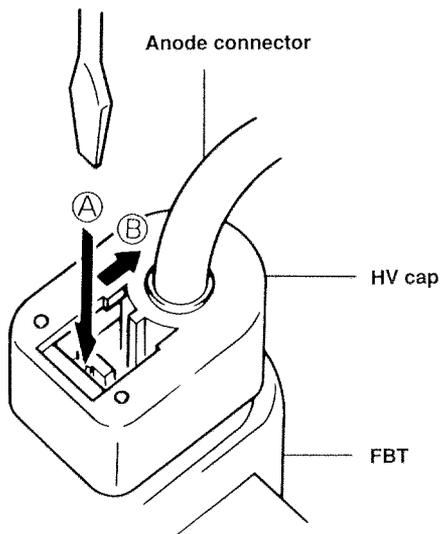

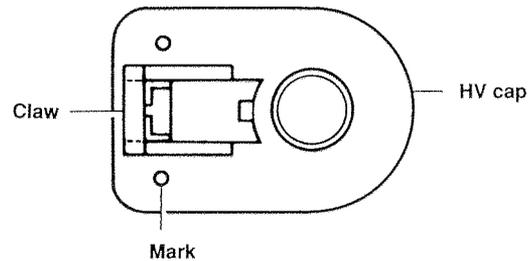

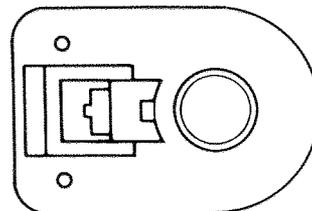

Fig. 6

During Insertion

1. Insert the anode connector deep into the FBT (to section (C) in Fig. 7) and then push the HV cap into the FBT until it clicks.
2. Make sure the connector is securely inserted. (Check that the claw is at the mark on the HV cap shown as in Fig. 8 (1).)

- (1) Lock on
(When connector is inserted)

- (2) Release
(When connector is removed)

Fig. 8

2. Remove the HV cap and remove the anode connector (Fig. 7).

1. ASSEMBLED P.W.B. ADJUSTMENT (Surround P.W.B.)

Note: This adjustment is only necessary when replacing the Surround P.W.B. Do not press INITIAL SET for an existing Surround P.W.B. or adjustment data will be lost. (Do not press ENTER)

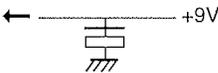

Preparation for adjustment

MTS demodulating circuit adjustment

(1) Press the "POWER" button while pressing the "VOL DOWN" button to select "MTS ADJ" mode as shown.

| MTS ADJUST | |
|----------------|------|
| ➔ INITIAL SET | : |
| INPUT LEVEL | : 20 |
| ST VCO | : 20 |
| FILTER | : 3F |
| SEPARATION (L) | : 20 |
| SEPARATION (H) | : 20 |
| SAP VCO | : 20 |

- (2) Select the "INITIAL SET" to set each adjust data to initial data.
- (3) Apply +9±0. 1V to the point as shown below.
 - (1) SU1 connector (19) pin (MAXUS)
 - (2) FRONTEND (U001) +B
 - (3) SU 2 connector (14) pin GND

1.1 ST VCO adjustment

Adjustment preparation

- (1) Select the "ST VCO" on "MTS ADJ" mode
- (2) Connect a frequency counter to SU1 connector (7) pin (IW01 (26) pin R-OUT).

Note: Use 1:1 probe

Probe standard $R_i \geq 1M\Omega$, $C_i \leq 15pF$

- (3) Input of SU1 connector (10) pin (IW01 (7) pin AUDIO in) is no signal.

Adjustment procedure

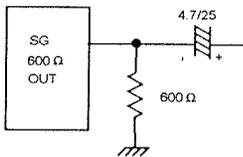

- (1) Adjust the data Set to 15. 734±0. 1kHz of a frequency counter.
 - Note: Variable range of data: 00-3F (HEX).
 - Wave form of SU1 connector (7) pin (IW01 (26) pin R-OUT).

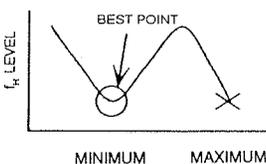

1.2 Filter adjustment

Adjustment preparation

- (1) Select the "FILTER" on "MST ADJ" mode.
- (2) Apply the signal to SU1 connector (10) pin (IW01 (7) pin AUDIO in) with the jig shown.

SU1 connector (10) pin (IW01 (7) pin AUDIO-IN)
 $f=15.734kHz$ (Sin wave)
 $v=100mVrms$

- (3) Connect an oscilloscope to SU1 connector (7) pin (IW01 (26) pin R-OUT)

Adjustment procedure

- (1) Adjust the data so that the wave form of SU1 connector (7) pin (IW01 (26) pin R-OUT) is minimum as shown above.

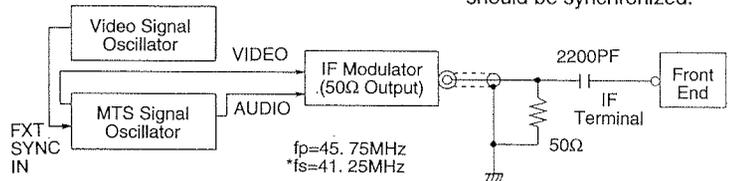

Note: Variable range of data: 00-3F (HEX)

1.3 Input level adjustment

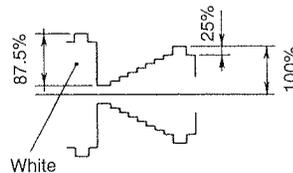

Adjustment preparation

- (1) Select the "INPUT LEVEL" on "MTS ADJ" mode.
- (2) Apply the signal to F/E IF input terminals of SIGNAL PWB using the jig shown.

Using the jig
 *Video signal and audio signal should be synchronized.

IF modulator output signal waveform (Color bar or all white)

IF modulator output level and P/S
 $P=106dBu$ (50 ohm termination)
 S level: -3dB to p
 At this time, S/N ratio of F/E video output is 45dB or less.

Sound Modulation Condition

- Noise reduction encoder : ON
- Stereo signal :
 - ① R=0 (L only), 300Hz, 30% modulation (note)
 - ② R=0 (L only), 3KHz, 30% modulation (note)
- Monaural signal :
 - ③ Monaural, 400Hz, 100% modulation (PRE-EN OFF)
- SAP signal :
 - ④ SAP, 300Hz, 30% modulation (note)

Note 1: Use sound modulator with frequency characteristics within +1% during 50Hz-100KHz.

Note 2: Turn off noise reduction (NR), set 30% modulation, then turn (NR) on. Set modulation at audio signal generator output, not IF modulator output.

- (3) Connect AC voltmeter to SU1 connector (7) pin (IW01 (26) pin R-OUT)

Adjustment procedure

- (1) Select sound input signal 3 and adjust the data set to 500±10mVrms of V_o .

Note: Variable range of data: 00-3F (HEX)

1.4 Separation adjustment

Adjustment preparation

- (1) Connect an oscilloscope to SU1 connector (IW01 (26) pin R-OUT)
- (2) Same as in item 1.3 (2).
- (3) Set "MTS" to "STEREO".

Adjustment procedure

- (1) Select the "SEPARATION (L)" on "MTS ADJ" mode.
- (2) Select sound input signal ① and adjust the data so that 300Hz level is min.

Note: Variable range of data: 00-3F (HEX)

- (3) Select the "SEPARATION (H)" ON "MTS ADJ" mode.

- (4) Select sound input signal ② and adjust the data so that 3kHz level is min.

Note: Variable range of data: 00-3F (HEX)

- (5) Repeat (1) and (4).

Note: Adjustment precision: within + 1dB from min. point.

- "STEREO" should be displayed on the screen.
- Readjust INPUT LEVEL (1.3) as required.

1.5 SAP VCO adjustment

Adjustment preparation

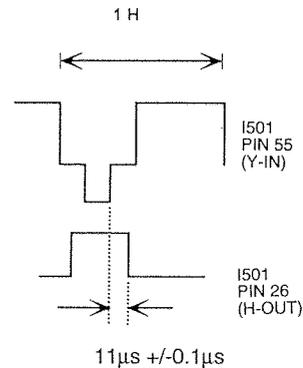

- (1) Select the "SAP VCO" mode.
- (2) Connect a frequency counter to SU1 connector (7) pin (IW01 (26) pin R-OUT).

- Note:**
- Use probe 1:1.
 - Probe standard $R_i \geq 1M\Omega$, $C_i \leq 15pF$.
- (3) Input of SU1 connector (10) pin (IW01 (7) pin AUDIO in) is no signal.

Adjustment procedure

- (1) Adjust the data set to read 78.67 \pm 0.5kHz on frequency counter.

- Note:**
- Variable range of data: 00-3F (HEX)
 - Wave form of SU1 connector (7) pin (IW01 (26) pin R-out).

1.6 SAP reception check

Adjustment preparation

- (1) Same as in item 1.3 (2).
- (2) Connect an oscilloscope to SU1 connector (IW01 (26) pin R-OUT).
- (3) Set "MTS" to "SAP".

Adjustment procedure

- (1) Select the audio input signal (1). The output level at this time is represented by VST.
- (2) Select the audio input signal (4). Check that the output level at this time is almost the same as VST. ("SAP" should be displayed at this time.)

2. CHASSIS ASSEMBLY ADJUSTMENT (SIGNAL BLOCK)

2.1 Memory initialization

Adjustment preparation

- (1) Refer to section 4. ADJUSTMENT POINT to locate the 2-pin PI2 connector, on the signal PWB.

Adjustment procedure

- (1) Short the pins for one second, then remove.
- (2) A short "beep" will be heard at reset time, and channel "03" will be displayed on the OSD.

- Note:** The TV will be set to factory shipping conditions. Do not unplug set or press any buttons during this operation.

2.2 Comb filter adjustment

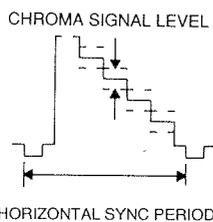

Adjustment preparation

- (1) Receive the color bar signal at the regular tuning point.
- (2) Connect the oscilloscope to the emitter of Q312.
- (3) Set the brightness to Max (+31) and set the other controls to typ (0).
- (4) Set the AI to OFF.

Adjustment procedure

- (1) Check that the residual signal level is 50mVp-p or less.

- Note:** The chrome signal level is the point shown below.

- Note:**
- Use a 10:1 probe.
 - Use an oscilloscope with a 20mV/div resolution.

2.3 Horizontal coarse AFC adjustment (R367)

Adjustment preparation

- (1) Receive the reverse cross-hatch pattern signal. (Cross-hatch lines are black.)
- (2) Connect the oscilloscope to I501 pin (55) (Y-in) and pin (26) (Horizontal pulse out).

Adjustment procedure

- (1) Adjust R367 (AFC) for 11µs delay between pin (55) and (26).

3. FINAL ASSEMBLY ADJUSTMENT

3.1 Optical system adjustment

3.1.1. Focus adjustment

Adjustment preparation

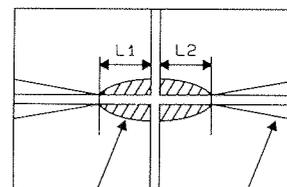

- (1) The set can face in any direction, west, east, north or south.
- (2) Receive the cross-hatch pattern signal.
CONTRAST: CENTER
BRIGHTNESS: -16 (-8 position shown on the display)
- (3) The electrical focus adjustment should have been completed.
- (4) The centering DY inclination should have been adjusted.

Adjustment procedure

- (1) Loosen the fixing screw on the lens cylinder so that the lens cylinder can be turned. (Be careful not to loosen too much. If it is loosened too much, rattling when tightening becomes greater and the focus may drift.) After completing steps (5), (6) and (7) below, tighten the fixing screws for each lens with a torque of 12-17kg/cm.
- (2) Apply covers to 2 of R, G and B lenses, and project a single color on the screen and adjust in sequence. (The adjustment order of R, G and B is only an example.)
- (3) For each of the R, G and B lenses, observe the color aberration generated on the outer circumference of the cross-hatch bright line at the center section \pm 3 pitches vertically and horizontally from the center.
- (4) If the lens adjustment knob is turned clockwise, viewed from the front, the color aberration changes as follows.

| Lens | Change of color aberration |
|--------|------------------------------|
| R lens | Orange \rightarrow Crimson |
| G lens | Blue \rightarrow Red |
| B lens | Purple \rightarrow Green |

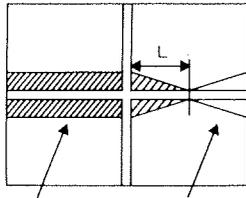

- (5) In case of G lens, set to the point where the chromatic aberration switches from blue to red. If the chromatic aberration appearing all over the screen is not the same, observe the horizontal bright line at the center of the screen and set to the position where red chromatic aberration slightly appears (reference value: 1-3mm) within the cross-hatch pitches specified in Table below. When the red chromatic aberration appearing at both sides of the bright line is not equal, observe the side with larger chromatic aberration when adjusting.

CHROMATIC ABERRATION (REFERENCE VALUE: 1-3mm)
Red
CHROMATIC ABERRATION
Blue

| Set Size | Pitch between L1 & L2 |
|----------|-------------------------|
| 50" | 4.0 cross-hatch pitches |
| 55" | 4.0 cross-hatch pitches |

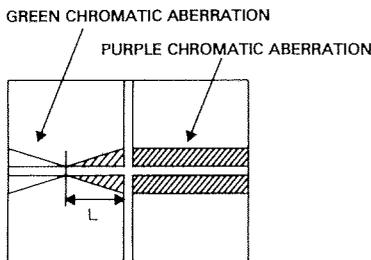

- (6) In case of R lens, set to the position where the chromatic aberration changes from orange to crimson.
As shown below, observe the horizontal bright line at the center and set to the position where the crimson chromatic aberration slightly appears (reference value: 1-3mm) within the cross-hatch pitches specified in Table below. Change the signal and fine-adjust in the same way as the G lens.

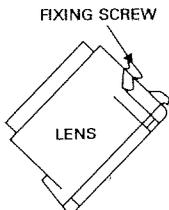

CRIMSON CHROMATIC ABERRATION ORANGE CHROMATIC ABERRATION

| Set Size | Pitch between L |
|----------|-------------------------|
| 50" | 4.0 cross-hatch pitches |
| 55" | 4.0 cross-hatch pitches |

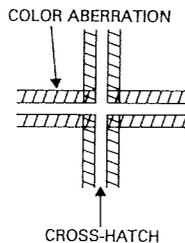

- (7) In case of B lens, set to the position where the chromatic aberration changes from purple to green.

Notes: (1) Fixing screw

(2) Color aberration

- (3) Since the G light is very important for picture quality and performance, pay special attention in its adjustment.

Note: Be careful not to touch the lens with your fingers when adjusting.

- (4) For red, setting to the center between orange and crimson is optimum.
(5) For blue, setting to the center between purple and green is optimum.

3.2 Signal system adjustment

3.2.1. White balance adjustment

- Screen adjustment
- High brightness white balance
- Low brightness white balance

| Screen adjustment VRs | Drive adjustment VRs |
|-----------------------|----------------------|
| Red: R804R | Red: R874 |
| Green: R804G | Green: R843 |
| Blue: R804B | |

Adjustment preparation

- Start adjustment 20 minutes or more after the power is turned on.
- The vertical incident illumination on the screen should be 20 lux or less.
- Receive the white raster.
- Set the drive adjustment VRs (red and green) to their mechanical centers.
- Turn the screen adjustment VRs (red, green, blue) fully counterclockwise.
- Set video preference setting white control to warm position.
- Set the S301 switch to the front as viewed from the front of the signal P.W.B. (Set to SERVICE side.)

Adjustment procedure

- Gradually turn the screen adjustment VRs (red, green, blue) clockwise and set them where the red, green and blue slightly bright lines just appear evenly on the screen.
- Return S301 to the NORMAL side.
- Set the brightness and black level controls to minimum and turn the sub brightness adjustment VR (R325) and set so that the white raster can be seen slightly.
- Set the brightness and black level controls to maximum.
- Adjust the high brightness white balance using the drive adjustment VRs (red, green).
- Set the brightness to 3ft-L amount or less using the brightness and black level controls.
- Adjust the low brightness white balance using the screen adjustment VRs (red, green, blue). (Visually adjust.)
- Check that high brightness white balance is obtained. If it does not, return to step (5).

Note: When adjusting the white balance, if the horizontal single raster is to be obtained using S301, check that the screen adjustment VRs are turned fully counterclockwise. Since the phosphorescent surface of the CRT is likely to be burnt, be careful.

White balance: 7500°K+0MPCD
Color coordinate: X.....0.301
Y.....0.310

3.2.2. Sub brightness adjustment (R325)

Adjustment preparation

- Start adjustment 20 minutes or more after the power is turned on. Receive the color bar signal.
- Set the contrast and color controls to minimum.
- Set the brightness to -6 (-3 position shown on the display).
- The vertical incident illumination on the screen should be 20 lux or less.

| W | Y | CY | G | MG | R | BL |
|----|----|--------|----|----|-----|----|
| A7 | A6 | A5 | A4 | A3 | A2 | A1 |
| b | | | | | | |
| c | | | | | | |
| d | | | | | | |
| Q | I | W 100% | | | BLK | |

← GRAY SCALE
← Should sink to black
← Should rise slightly from black

Adjustment procedure

- Adjust so that the points A1 and A2 sink to black and A3 slightly above it rises using the sub brightness adjustment VR (R325).

Note: Directly observe the screen by eye without using a mirror.

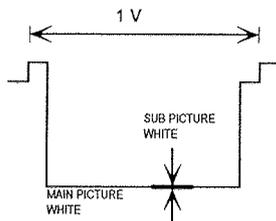

3.2.3. Sub picture adjustment (R506-B, R505-G, R502-R)

Adjustment preparation

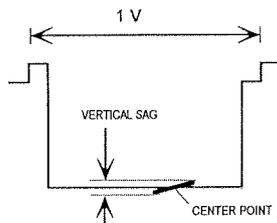

- (1) Start adjustment after power is on for 20 minutes.
- (2) Use a white raster signal for adjustment.
- (3) Press "FREEZE" on the remote control to display the sub picture.
- (4) Set contrast to center, brightness minimum, AI off.

Adjustment procedure

- (1) Connect oscilloscope to TP802B and adjust R506 to match blue level of main and sub pictures.
- (2) Repeat for TP802G and R505 green, TP802R and R502 for red.

Note: If the sub picture has a signal sag, adjust level at center point.

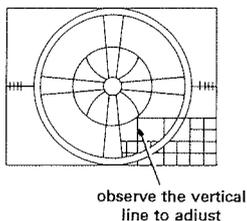

3.2.4. Shoot balance adjustment (R333)

Adjustment preparation

- (1) Receive the reverse cross-hatch pattern signal. (Cross-hatch lines are black.)
- (2) Set the video condition to factory reset.
- (3) Turn the shoot balance adjustment VR (R333) fully counterclockwise.

Adjustment procedure

- (1) Gradually turn the shoot balance adjustment VR (R333) clockwise and adjust so that the width of pre-shoot and over-shoot of the vertical line (black) shown in the circle pattern are balanced. (Visually adjust.)

Note: Directly observe the screen by eye without using a mirror.

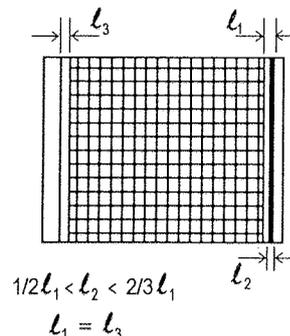

3.2.5. Horizontal AFC adjustment (R367)

Adjustment preparation

- (1) Receive the reverse cross-hatch pattern signal. (Cross-hatch lines are black.)
- (2) Set CONTRAST to maximum BRIGHTNESS to center.
- (3) Lens focus should be completed.
- (4) Electrical focus should be coarse adjusted.
- (5) Dynamic convergence should be coarse adjusted.
- (6) Raster inclination should be completed.

Adjustment procedure

- (1) Project only green color. Cover R & B lenses or short 2P mini connectors on CPT P.W.B.'s.
- (2) Adjust H-size to minimum. RUL9 fully counterclockwise.
- (3) Adjust green centering magnet (located on DY) to shift picture left to display edge of raster.
- (4) Adjust AFC (R367) so foldover of front porch occurs. Amount of foldover is 1/2 to 2/3 of front porch (l_1).

- Note:**
- (1) If raster edge cannot be seen, adjust GH-Pin (RUG9) fully counterclockwise and GH-L-Pin (RUG5) to its mechanical center.
 - (2) Front and back porch of video should be equal.
 - (3) If adjustment is difficult with test pattern, follow adjustment 2.3.

3.3. DEFLECTION SYSTEM ADJUSTMENT

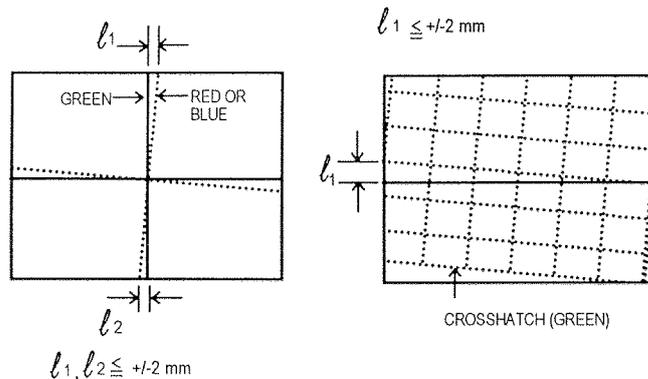

3.3.1. Raster inclination adjustment (Deflection yoke)

Adjustment preparation

- (1) The set can face east or west.
- (2) Input the single cross test signal.
- (3) CONTRAST: MAX
BRIGHTNESS: CENTER
- (4) The lens focus adjustment should have been completed.
- (5) The electric focus should have been coarse adjusted.
- (6) The dynamic convergence should have been coarse adjusted. Set the RH-Skew (RU82), BH-Skew (RUE3), RV-Skew (RU25), BV-Skew (RU53), GV-Center (RUN5), GH-Center (RUN9), BV-Center (RUP4), BH-Center (RUP8), RV-Center (RUQ3), and RH-Center (RUQ7) adjustment VRs to their mechanical centers.
- (7) Start adjustment 20 minutes or more after TV is turned on.

Adjustment procedure

- (1) Apply covers to the R and B lenses and project only green light.
- (2) Turn the G deflection yoke and adjust the vertical raster inclination.
- (3) Then, remove the cover of R or B lens and project red or blue light and green light together on the screen.
- (4) Turn the deflection yoke of R or B and set so that the inclination of R or B with respect to the green light is as shown below on the top and bottom sides.
- (5) After raster inclination adjustment, fixing screw of DY should be screwed with $12 \pm 2 \text{ kg} \cdot \text{cm}$ torque.

3.3.2. Raster position adjustment

Adjustment preparation

- (1) The same as item 3.3.1. (1)~(7).
- (2) The raster inclination adjustment should have been completed.
- (3) Horizontal AFC adjustment should have been completed.
- (4) Apply marking using the tape, etc. at the positions on the screen as shown in Fig. 3-3-2.

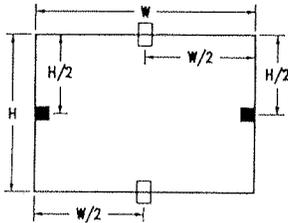

Fig. 3-3-2.

Adjustment procedure

- (1) Apply covers to the R lens and B lens, and project only green light on the screen.
- (2) Use the green centering magnet and adjust so that the vertical and horizontal lines of the cross pattern match the position where the markings have been applied.
- (3) Then remove the cover of R lens or B lens, and project the red or blue light and green light on the screen.
- (4) Turn the R or B centering magnet to match the color with the green light.

Note: (1) Spec for green centering vertical direction $\pm 3\text{mm}$
horizontal direction $\pm 2.5\text{mm}$.

- (2) Center of test pattern with respect to geometrical center of screen:
horizontal within 30mm, vertical within 20mm
- (3) Red and Blue centering with respect to green is $\pm 2\text{mm}$ in both horizontal and vertical directions.

3.3.3. Pincushion distortion and keystone distortion correction

Adjustment preparation

- (1) The screen can face any direction, north, south, east and west.
- (2) Display the cross-hatch pattern signal.
- (3) The focus adjustment of the G lens should have been completed.
- (4) The G raster (deflection yoke) inclination should have been adjusted.
- (5) The vertical amplitude and horizontal amplitude should have been coarse adjusted.
- (6) Set the GV-Center (RUN5) and GH-Center (RUN9) adjustment VRs to their mechanical centers.

Adjustment procedure

- (1) Project only G on the screen using any one of following procedures.
 - a. Apply covers to the R and B lenses.
 - b. Short-circuit 2P sub mini connectors plug pins of the R and B CPT P.W.B.
- (2) Adjust the horizontal line of the G according to the procedure shown in Table 3-1.
- (3) Adjust the vertical line of the G according to the procedure shown in Table 3-2.

Note: (1) The positions of the adjustment VRs are shown in Fig. 3-4-4. The movement of the bright line corresponding to each VR is shown in Fig. 3-4-3.
(2) After this adjustment, check the raster position, vertical amplitude and horizontal amplitude of the G and adjust finally.

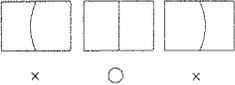

Table 3-1. The pincushion and keystone distortion correction of the horizontal green line (refer to Figs. 3-4-3 and 3-4-4).

| No. | Adjustment Item | | Adj. VR | Adjustment Details |
|-----|-----------------------|--|---------|--|
| 1 | Lower horizontal line | Upper/lower pincushion distortion GV-PIN | RUF2 | Correct the bow distortion of the lower horizontal line and make it a straight line. |
| 2 | | Upper/lower keystone distortion GV-KEY | RUG1 | Remove the inclination of the lower horizontal line. |
| 3 | Upper horizontal line | Upper pincushion distortion GV-U-PIN | RUE7 | Correct the bow distortion of the upper horizontal line and make it a straight line. |
| 4 | | Upper keystone distortion GV-U-KEY | RUF6 | Remove the inclination of the upper horizontal line. |

Note 1. Adjustment procedure of the horizontal line (1) Lower line (RUF2/RUG1) and then (2) Upper line (RUE7/RUF6).

Note 2. Adjust repeatedly as occasion demands.

Table 3-2. The pincushion and keystone distortion correction of the vertical green line (refer to Figs. 3-4-3 and 3-4-4).

| No. | Adjustment Item | | Adj. VR | Adjustment Details |
|-----|-------------------------|---|---------|--|
| 1 | Center vertical line | Left/right pincushion distortion phase GV-PIN-PHASE | RT26 | (1) Approximately correct the bow distortion at both the left and right sides using GH-PIN (RUG9) and GH-L-PIN (RUG5). (2) Turn RT26 to correct the bow distortion of the center vertical line and to make it a straight line.  |
| 2 | Right vertical line | Left/right pincushion distortion GH-PIN | RUG9 | Correct the bow distortion of the right side vertical line and make it a straight line. |
| 3 | | Left/right keystone distortion GH-KEY | RUH8 | Remove the inclination of the vertical line on the right side. |
| 4 | Left side vertical line | Left pincushion distortion GH-L-PIN | RUG5 | Correct the bow distortion of the left side vertical line and make it a straight line. |
| 5 | | Left keystone distortion GH-L-KEY | RUH4 | Remove the inclination of the vertical line on the left side. |

Note 1. Adjustment procedure of the vertical line (1) Phase (RT26), (2) Lines on right (RUG9/RUH8), and then left side (RUG5/RUH4).

Note 2. Adjust repeatedly as occasion demands.

3.3.4 Size adjustment

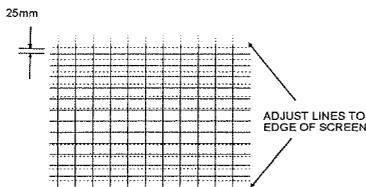

3.3.4.1. Vertical amplitude adjustment (RUN3)

Adjustment preparation

- (1) Start adjustment more than 20 minutes after the power is turned on.
- (2) The pincushion distortion and the keystone distortion adjustment should have been completed.
- (3) Receive the crosshatch signal.
- (4) Set the contrast control to maximum and brightness control to center.
- (5) Apply cover to the R and B lenses or short-circuit the 2P sub-mini plug pins on the R and B CPT P.W.B. and project only Green on the screen.
- (6) Set the GV-Center (RUN5) and GH-Center (RUN9) adjustment VRs to their mechanical center.

Adjustment procedure

- (1) Adjust RUN3 so that top and bottom edge of crosshatch touch top and bottom edge of screen frame.
- (2) Note the position of the first horizontal crosshatch line.
- (3) Increase V size so that the horizontal line moves up 25mm.

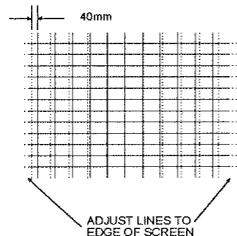

3.3.4.2. Horizontal amplitude adjustment (RUL9)

Adjustment preparation

- (1) The same as items 3-3-4-1 (1)-(6).

Adjustment procedure

- (1) Adjust RUL9 so that left and right edge of crosshatch touch left and right edge of screen frame.
- (2) Note position of first vertical crosshatch line.
- (3) Increase H size (RUL9) so that the vertical line moves to the left 40mm.

3.3.5 Focus adjustment

3.3.5.1. Beam alignment

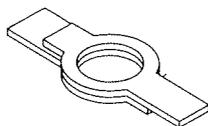

Adjustment preparation

- (1) Adjust at least 30 minutes after turning on power switch.
- (2) The static convergence data should be cleared (see section 2.1 Memory initialization).
- (3) Raster inclination, centering, horizontal and vertical amplitudes and optical focus adjustment should be completed.
- (4) Contrast: Max.
Other items: Typ.
- (5) Receive cross-hatch signals. (Use of internal cross-hatch signals allowed.)
- (6) Short-circuit all metal parts (metal fittings, centering magnet) installed on the projection tubes to GNDs of the projection tubes.

Since metal parts are charged with electricity, shocks may be caused if they are not short-circuited.

Adjustment procedure

- (1) Green (G) tube beam alignment adjustment. Short-circuit 2P subminiature connector plug pins of Red (R) and Blue (B) on the CPT boards and project only Green (G) tube.
- (2) Put Green (G) tube beam alignment magnet to the cancel state as shown below.

- (3) Turn the Green (G) static focus (Focus Pack) counterclockwise all the way and make sure of position of cross-hatch center on screen. (Halo state.)

- (4) Turn Green (G) static focus (Focus Pack) clockwise all the way. (Blooming state.)
- (5) Turn two magnets forming alignment magnet in any desired direction and move cross-hatch center to position found in (3).
- (6) If image position does not shift when Green (G) static focus (Focus Pack) is turned, Green (G) beam alignment has been completed.
- (7) If image position shifts when Green (G) static focus (Focus Pack) is turned, repeat (2)-(6).
- (8) Conduct beam alignment for Red (R) focus: Focus Pack EFPK
Blue (B) focus: Focus Pack EFPK
- (9) Upon completion of adjustment, fix beam alignment magnets with white paint.

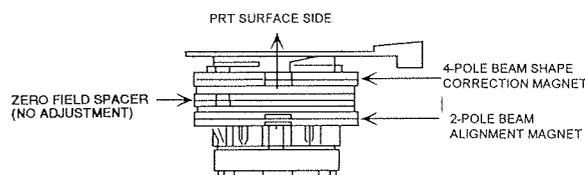

3.3.5.2. Beam shape adjustment

Adjustment preparation

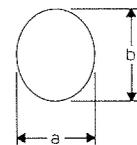

- (1) The beam alignment should have been completed.
- (2) The raster inclination, centering, horizontal/vertical amplitude and optical focus adjustments should have been completed.
- (3) Contrast: Max
Other time: Typ.
- (4) Input the dot signal.

Adjustment procedure

- (1) Green PRT beam shape adjustment. Short-circuit 2P submini connectors on Red and Blue CPT P.W.B.s to project only the Green beam.
- (2) Turn the green static focus fully clockwise. (Blooming.)
- (3) Make the dot at the screen center a true circle using the 4-pole magnet as shown below.
- (4) Also adjust the Red and Blue PRT beam shapes according to the steps (1) to (3).
- (5) After the adjustment is completed, return R, G and B static VRs to the Just focus point.

TRUE CIRCLE SPECIFICATION

TRUE CIRCLE DEGREE: a/b
SPECIFICATION: 0.9-1.1

3.3.5.3. Static focus adjustment

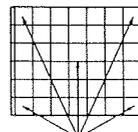

Adjustment preparation

- (1) The raster inclination, centering, horizontal/vertical amplitude and optical/electrical focus beam alignment should have been adjusted.
- (2) The static convergence data should be cleared.
- (3) Contrast: More than MAX-5 STEP
Brightness: Center (Reset point)
- (4) Receive the cross-hatch pattern signal.
- (5) Apply covers to the lenses of colors other than the color to be adjusted and project a single color.

Adjustment procedure

- (1) Red (R), Green (G) and Blue (B) static focus adjustment. Vary the static focus VR (focus pack EFPK) and make the center of the cross-hatch pattern clearest.
- (2) Observe the corners of the picture and check that the focus does not get conspicuously worse.

OBSERVING POINTS OF THE CORNER OF THE PICTURE

OBSERVING POINTS

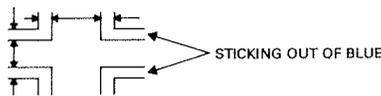

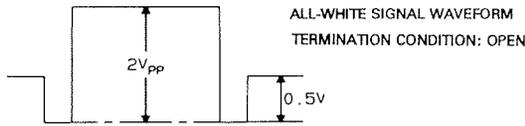

3.3.6. Blue defocus adjustment

Adjustment preparation

- (1) Optical and electrical focus adjustment should have been completed.
- (2) The convergence adjustment should have been completed. Coarse-adjustment is acceptable for convergence.
- (3) Brightness: Max.
Other items: Typ.

Adjustment procedure

- (1) Input an all-white signal shown below to VIDEO input.
- (2) Short-circuit 2P sub-mini connectors on the red and green CPT P.W.B.s to display only the blue beam.
- (3) Turn the B static (Focus Pack) fully clockwise.
- (4) Measure the brightness at the center of the screen and turn the B static (Focus Pack) counterclockwise to adjust the brightness of blue as shown in Table below.
- (5) After the adjustment is completed, if blue exceeds the specification, turn and adjust focus so that the sticking out part of blue satisfies the specification.

UNEVENNESS SPECIFICATION: $\pm 1\text{cd/m}^2$

Defocus brightness specification

| Screen Size | Brightness of Blue |
|-------------|----------------------|
| 50" | 37 cd/m ² |
| 55" | 30 cd/m ² |

Defocus sticking out specification

| Screen Size | Blue sticking out |
|-------------|-------------------|
| 50" | 2.0 mm |
| 55" | 2.0 mm |

Condition: User controls are set to the initial set positions (for shipment) Measuring point Screen center.

Cautions: Correct the brightness gauge and amplitude of the all-white signal periodically. The aperture angle of the brightness gauge is 1°. Use a cross-hatch pattern to check.

3.4. CONVERGENCE ADJUSTMENT

3.4.1. Static convergence adjustment

Adjustment preparation

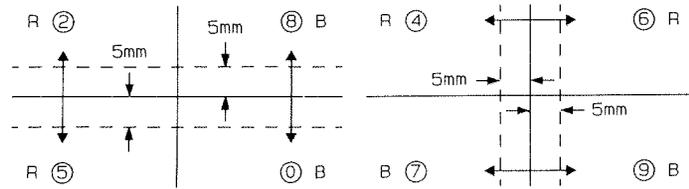

- (1) The screen can face east or west.
- (2) Display the cross pattern signal or the cross-hatch pattern signal.
- (3) R, G and B lens focus adjustment and R, G and B raster inclination adjustment should have been completed.
- (4) G raster position adjustment, pincushion distortion, and keystone distortion adjustments should have been completed.
- (5) R and B raster position (centering magnet) adjustment should have been completed.
- (6) The dynamic convergence should have been coarse adjusted previously.

Adjustment procedure

- (1) Set to CONVERGENCE mode using the MENU and CURSOR buttons of the remote control.
- (2) Check that the variable range of the static convergence adjustment is obtained as shown below using the cursor buttons of the remote control transmitter.

(3) RV, BV

RH, BH

If the adjustment cannot be done, turn the centering magnets for R and B and re-adjust the R and B raster position.

- Note:**
- (1) Refer to page 14 for static convergence adjustment.
 - (2) Return TV set to normal mode by pressing the MENU button on the remote control.
 - (3) Static convergence is set to standard mode during memory initialization.

3.4.2. Dynamic convergence adjustment

Adjustment preparation

- (1) The screen can face any direction, north, south, east and west.
- (2) Start adjustment 20 minutes or more after the power switch is turned on.
- (3) Display the cross-hatch pattern signal.
- (4) The following adjustments should have been completed for R, G and B.
 - (a) Lens focus
 - (b) Raster (deflection yoke) inclination
 - (c) Raster position
- (5) The following adjustments should have been completed for the G raster.
 - (a) Pincushion distortion
 - (b) Keystone distortion
 - (c) Vertical amplitude
 - (d) Horizontal amplitude
- (6) Horizontal AFC adjustment should be completed.
- (7) Contrast: Max., Brightness: Center
- (8) Static convergence should be set to standard mode (memory initialization).

Adjustment procedure

- (1) R adjustment - Match the R with the G following the procedure shown in Tables 3-4-1 and 3-4-2. At the same time, perform the static convergence adjustment of R.
- (2) B adjustment - Match the B with the G following the procedure shown in Tables 3-4-1 and 3-4-2. At the same time, perform the static convergence adjustment of B.
- (3) Adjust repeatedly so that the amount of misconvergence of all colors is minimized.
 - (a) If convergence of the vertical line at the right end is drifted, match it using RUJ3 (red) or RUK2 (blue).
 - (b) If convergence of the vertical line at the left end is drifted, match it using RUJ7 (red) or RUK6 (blue).
- (4) After adjustment, re-adjust R and B raster position.
- (5) After the static convergence adjustment and dynamic convergence adjustment are completed, fix the centering magnet (located on the R and B deflection yokes) using white paint.

- Note:**
- (1) When adjusting the R, turn off the B using any one of the following procedures as required.
 - (a) short-circuit the 2P subminiature connector plug pins on the B CPT P.W.B.
 - (b) Apply cover to the B lens.
 - (2) When adjusting the B, turn off the R using any one of the following procedures as required.
 - (a) short-circuit the 2P subminiature connector plug pins on the R CPT P.W.B.
 - (b) Apply cover to the R lens.
 - (3) The position of VRs and the movement of the bright lines are shown in Fig. 3-4-3 and Fig. 3-4-4.

Table 3-4-1. Dynamic convergence adjustment of the horizontal line (RED/BLUE)

| No. | Adjustment Item | | Adj. VR | | Adjustment Details |
|-----|-----------------------------|---|---------|------|---|
| | | | RED | BLUE | |
| 1 | Horizontal center line | Vertical skew V-SKEW | RU25 | RU53 | Remove the inclination of the horizontal center line. |
| 2 | | Vertical bow V-BOW | RU23 | RU51 | Correct the bow distortion of the horizontal center line and make it a straight line. |
| 3 | Lower horizontal line | Upper/lower pincushion distortion V-PIN | RU05 | RU33 | Correct the bow distortion of the lower horizontal line and make it a straight line. |
| 4 | | Upper/lower keystone distortion V-KEY | RU13 | RU41 | Remove the inclination of the lower horizontal line. |
| 5 | Upper horizontal line | Upper pincushion distortion V-U-PIN | RU01 | RU29 | Correct the bow distortion of the upper horizontal line and make it a straight line. |
| 6 | | Upper keystone distortion V-U-KEY | RU09 | RU37 | Remove the inclination of the upper horizontal line. |
| 7 | Upper/lower horizontal line | Vertical size V-SIZE | RU19 | RU47 | Match upper/lower horizontal line with the green line by changing the vertical size. |
| 8 | | Vertical linearity V-LIN | RU17 | RU45 | Match upper/lower horizontal line with the green line by changing the linearity. |

Note:

1. Adjustment procedure of the horizontal lines (1) Center, (2) Lower, (3) Upper and then (4) Upper/Lower.
2. Accurately match the horizontal center lines (red/blue) with the green line using the centering magnets (item 3-3-2).
3. The adjustment VRs shown in items 7 and 8 of above table (RU19, RU47, RU17, RU45) as well as BV-Center (RUP4), BH-Center (RUP8), RV-Center (RUQ3), and RH-Center (RUQ7), should have been set to their mechanical centers previously.

Table 3-4-2. Dynamic convergence adjustment of the vertical line (RED/BLUE)

| No. | Adjustment Item | | Adj. VR | | Adjustment Details | |
|-----|--------------------------|--|---------|------|---|--|
| | | | RED | BLUE | | |
| 1 | Vertical center line | Horizontal skew H-SKEW | RU82 | RUE3 | Remove the inclination of the vertical center line. | |
| 2 | | Horizontal bow H-BOW | RU80 | RUE1 | Correct the bow distortion of the vertical center line and make it a straight line. | |
| 3 | Right side vertical line | Left/right pincushion distortion H-PIN | RU61 | RU90 | Correct the bow distortion of the right side vertical line and make it a straight line. | |
| 4 | | Left/right keystone distortion H-KEY | RU69 | RU98 | Remove the inclination of the right side vertical line. | |
| 5 | | Horizontal size H-SIZE | RU76 | RUA6 | Extend 2nd vertical line from the left/right side. | |
| 6 | | Horizontal linearity H-LIN | RU73 | RUA3 | Match 2nd vertical line from the right end with green line. | |
| 7 | | Right end line linearity H-R-LIN | RUJ3 | RUK2 | Match right end line with the green line. | |
| 8 | Left side vertical line | Left pincushion distortion H-L-PIN | RU57 | RU86 | Correct the bow distortion of the left side vertical line and make it a straight line. | |
| 9 | | Left keystone distortion H-L-KEY | RU65 | RU94 | Remove the inclination of the vertical line on the left side. | |
| 10 | | Left horizontal size H-L-SIZE | RUL1 | RUL5 | Match left side vertical line with the green line. | |
| 11 | | Left end line linearity H-L-LIN | RUJ7 | RUK6 | Match left end vertical line with the green line. | |

Note:

1. Adjustment procedure of the vertical lines (1) Center, (2) Right, and then (3) Left line.
2. Accurately match the vertical center lines (red/blue) with the green line using the centering magnets (item 3-3-2).
3. The adjustment VRs shown in items 5, 6, 7, 10 and 11 (RU76, RUA6, RU73, RUA3, RUJ3, RUK2, RUL1, RUL5, RUJ7 and RUK6) as well as RH-Center (RUQ7) and BH-Center (RUP8), should have been set to their mechanical centers previously.
4. Including centering magnets, adjust repeatedly as required.

MOVEMENT OF THE BRIGHT LINE

BASIC CIRCUIT DIAGRAM

PRODUCT SAFETY NOTE: Components marked with a  and shaded have special characteristics important to safety. Before replacing any of these components, read carefully the PRODUCT SAFETY NOTICE of this Service Manual. Don't degrade the safety of the receiver through improper servicing.

AP52 POWER SUPPLY

• All DC voltage to be measured with a tester (100kΩV). Voltage taken on a complex color bar signal including a standard color bar signal.
• Since this is a basic circuit diagram, the value of the parts is subject to be altered for improvement.

SPECIFICATION
 (1) Make a knot as shown in figure below after wires are through the hole (A) in cabinet.

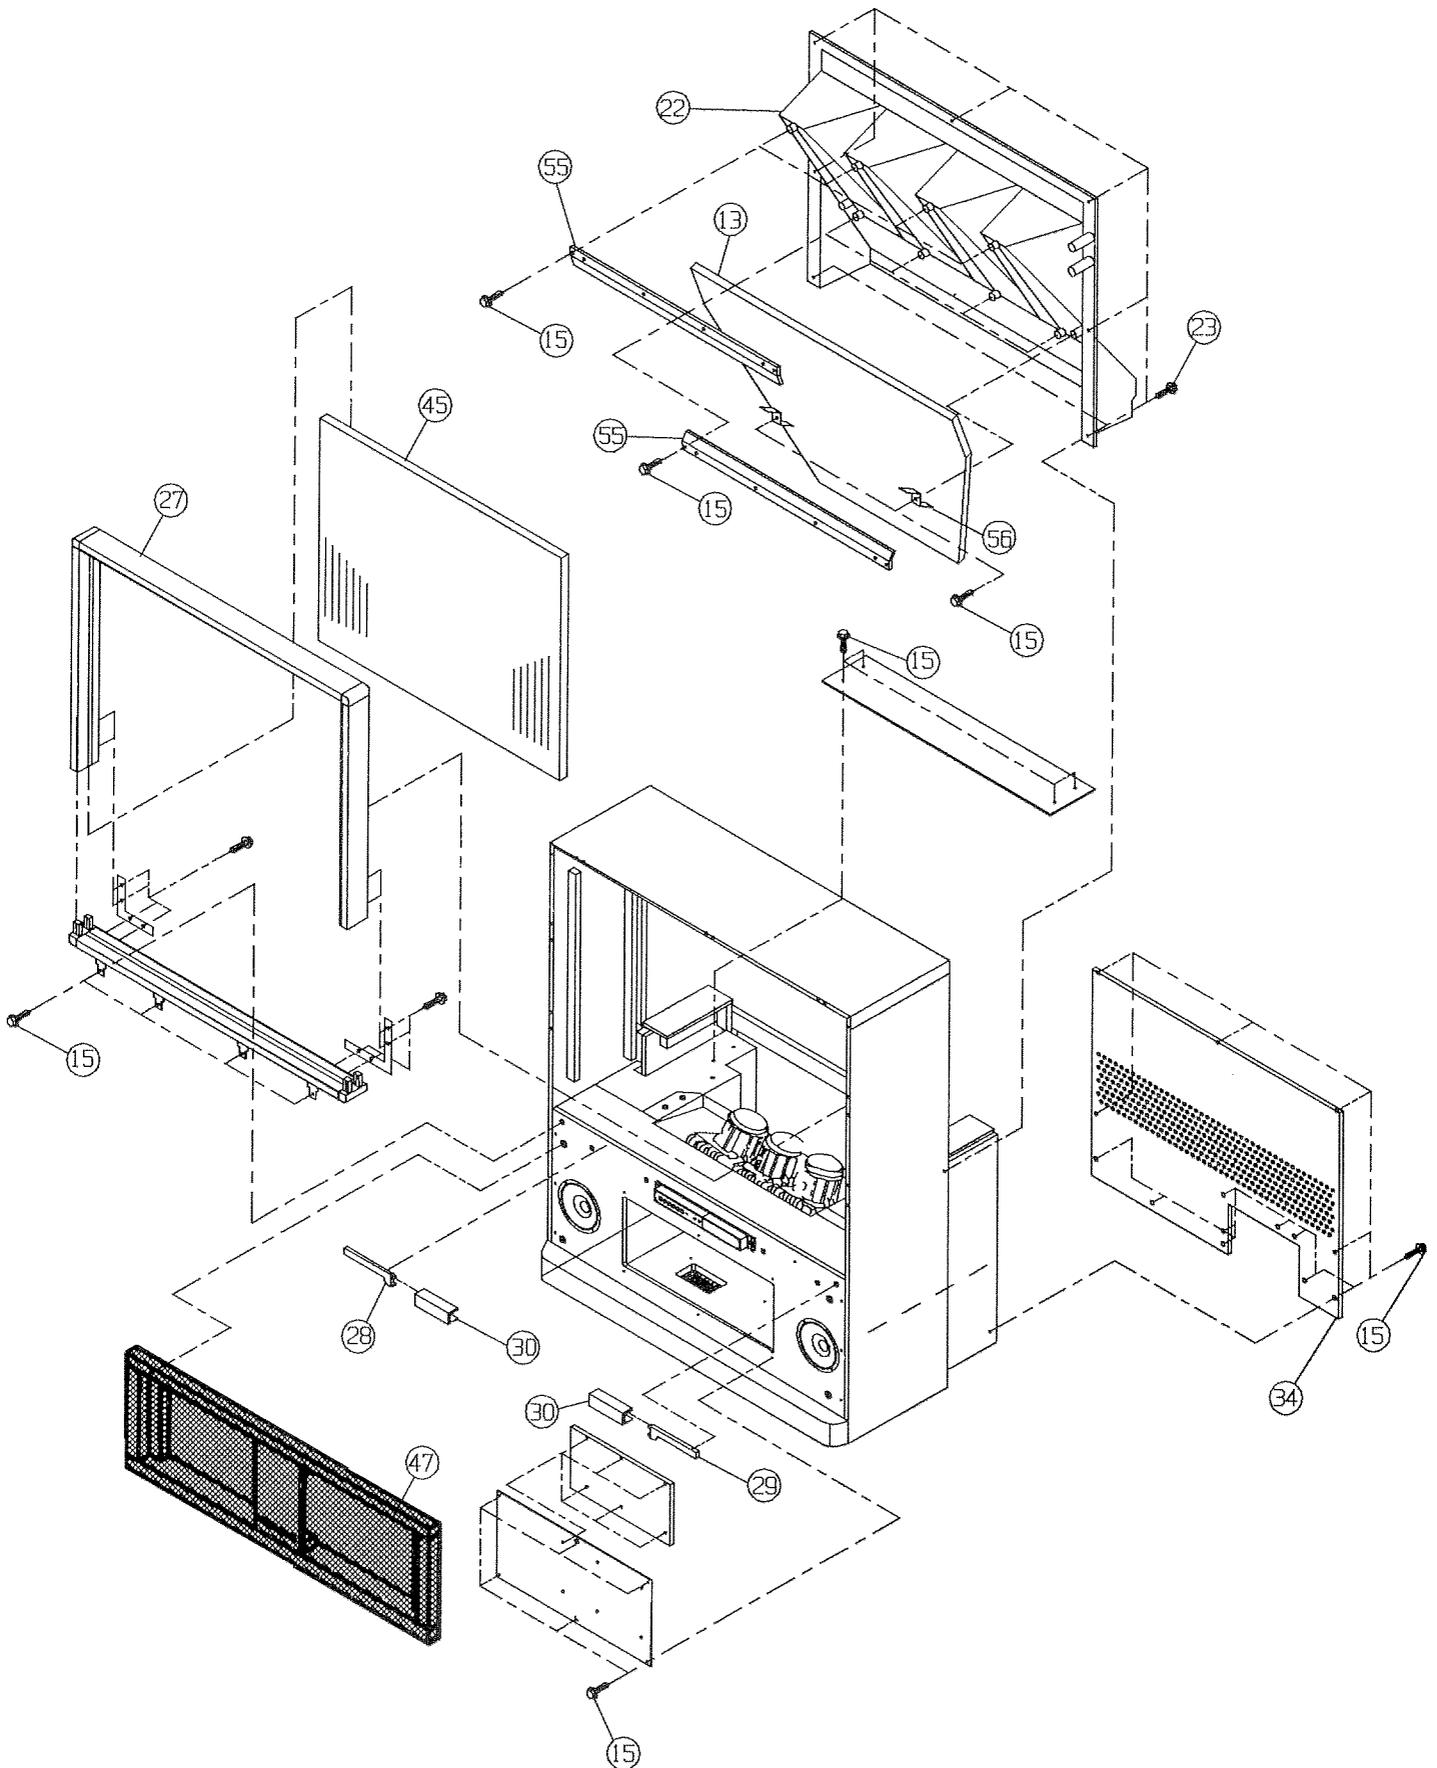

Put silicon in cabinet hole.

EXPLODED VIEW 50EX14BV (1/3)

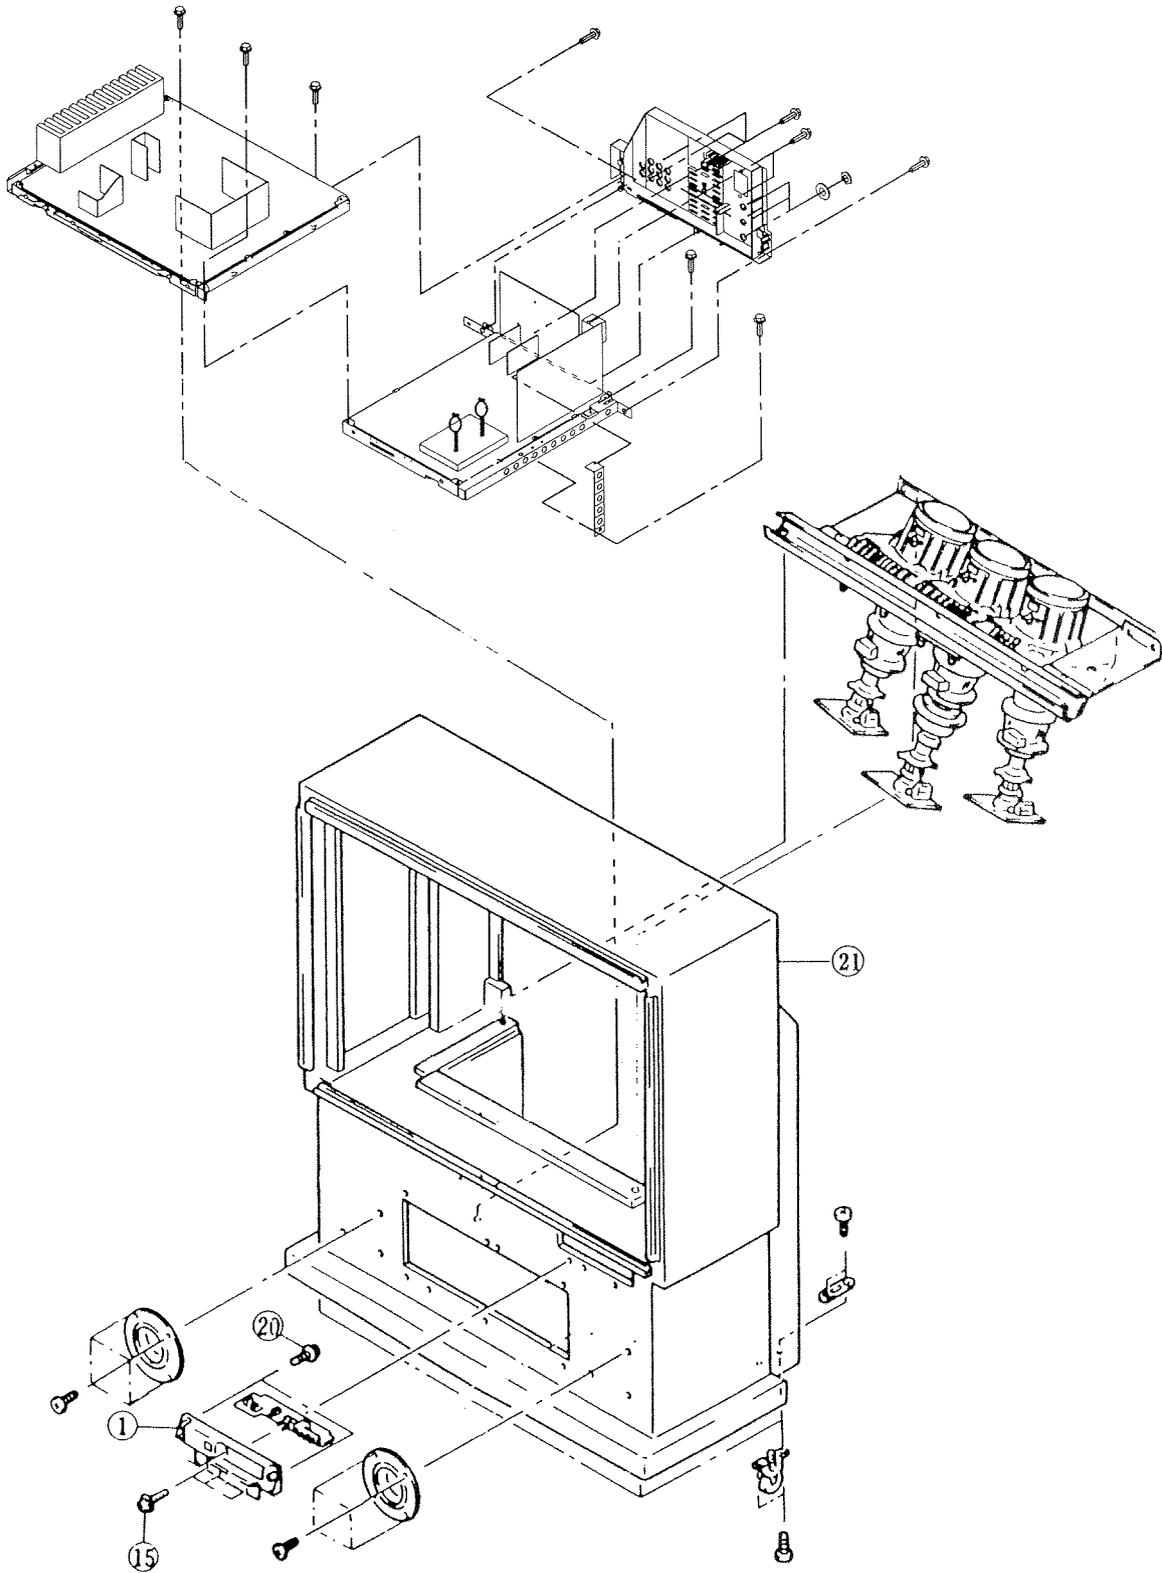

Note: Some parts may appear different than those shown in the exploded view. When ordering, refer to the REPLACEMENT PARTS LIST for correct part number. Since this Service Manual covers several models, use care to select the correct part for the model being serviced.
