COLOR TV **SERVICE MANUAL**

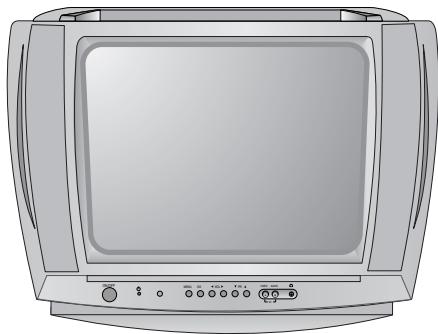

CHASSIS : MC-059B

MODEL: 14CA8RB/RG

14CA8RB/RG-TH

CAUTION

BEFORE SERVICING THE CHASSIS,
READ THE SAFETY PRECAUTIONS IN THIS MANUAL.

SAFETY PRECAUTIONS

IMPORTANT SAFETY NOTICE

Many electrical and mechanical parts in this chassis have special safety-related characteristics. These parts are identified by Δ in the Schematic Diagram and Replacement Parts List.

It is essential that these special safety parts should be replaced with the same components as recommended in this manual to prevent X-RADIATION, Shock, Fire, or other Hazards.

Do not modify the original design without permission of manufacturer.

General Guidance

An **isolation Transformer** should always be used during the servicing of a receiver whose chassis is not isolated from the AC power line. Use a transformer of adequate power rating as this protects the technician from accidents resulting in personal injury from electrical shocks.

It will also protect the receiver and its components from being damaged by accidental shorts of the circuitry that may be inadvertently introduced during the service operation.

If any fuse (or Fusible Resistor) in this TV receiver is blown, replace it with the specified.

When replacing a high wattage resistor (Oxide Metal Film Resistor, over 1W), keep the resistor 10mm away from PCB.

Keep wires away from high voltage or high temperature parts.

Due to high vacuum and large surface area of picture tube, extreme care should be used in **handling the Picture Tube**. Do not lift the Picture tube by its Neck.

X-RAY Radiation

Warning:

The source of X-RAY RADIATION in this TV receiver is the High Voltage Section and the Picture Tube.
For continued X-RAY RADIATION protection, the replacement tube must be the same type tube as specified in the Replacement Parts List.

To determine the presence of high voltage, use an accurate high impedance HV meter.

Adjust brightness, color, contrast controls to minimum.
Measure the high voltage.

The meter reading should indicate
 $23.5 \pm 1.5\text{KV}$: 14-19 inch, $26 \pm 1.5\text{KV}$: 19-21 inch,
 $29.0 \pm 1.5\text{KV}$: 25-29 inch, $30.0 \pm 1.5\text{KV}$: 32 inch

If the meter indication is out of tolerance, immediate service and correction is required to prevent the possibility of premature component failure.

Before returning the receiver to the customer,

always perform an **AC leakage current check** on the exposed metallic parts of the cabinet, such as antennas, terminals, etc., to be sure the set is safe to operate without damage of electrical shock.

Leakage Current Cold Check(Antenna Cold Check)

With the instrument AC plug removed from AC source, connect an electrical jumper across the two AC plug prongs. Place the AC switch in the on position, connect one lead of ohm-meter to the AC plug prongs tied together and touch other ohm-meter lead in turn to each exposed metallic parts such as antenna terminals, phone jacks, etc.

If the exposed metallic part has a return path to the chassis, the measured resistance should be between $1\text{M}\Omega$ and $5.2\text{M}\Omega$.

When the exposed metal has no return path to the chassis the reading must be infinite.

An other abnormality exists that must be corrected before the receiver is returned to the customer.

Leakage Current Hot Check (See below Figure)

Plug the AC cord directly into the AC outlet.

Do not use a line Isolation Transformer during this check.

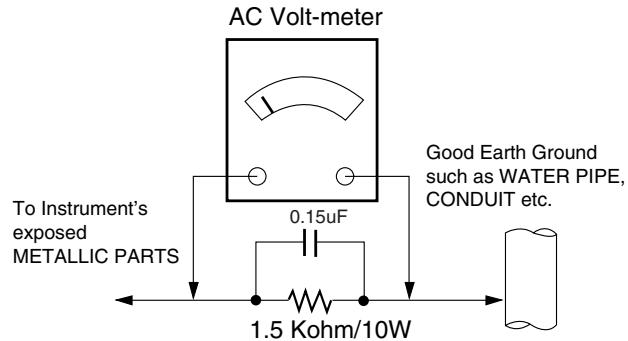

Connect 1.5K/10watt resistor in parallel with a $0.15\mu\text{F}$ capacitor between a known good earth ground (Water Pipe, Conduit, etc.) and the exposed metallic parts.

Measure the AC voltage across the resistor using AC voltmeter with 1000 ohms/volt or more sensitivity.

Reverse plug the AC cord into the AC outlet and repeat AC voltage measurements for each exposed metallic part. Any voltage measured must not exceed 0.75 volt RMS which is corresponds to 0.5mA.

In case any measurement is out of the limits specified, there is possibility of shock hazard and the set must be checked and repaired before it is returned to the customer.

Leakage Current Hot Check circuit

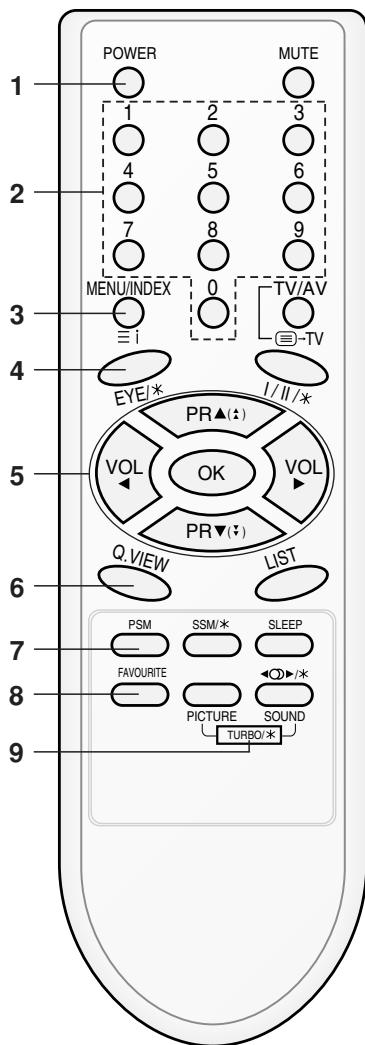

DESCRIPTION OF CONTROLS

All the functions can be controlled with the remote control handset. Some functions can also be adjusted with the buttons on the front panel of the set.

Remote control handset

Before you use the remote control handset, please install the batteries. See the next page.

- 1. POWER**
switches the set on from standby or off to standby.
- 2. NUMBER BUTTONS**
switches the set on from standby or directly select a number.
- 3. MENU (or INDEX)**
selects a menu.
selects an index page in the teletext mode (only TELETEXT models). (option)
- 4. EYE/* (option)**
switches the eye function on or off.
- 5. ▲ / ▼ (Programme Up/Down)**
selects a programme or a menu item.
switches the set on from standby.
scans programmes automatically.
◀ / ▶ (Volume Up/Down)
adjusts the volume.
adjusts menu settings.
OK
accepts your selection or displays the current mode.
- 6. Q.VIEW**
returns to the previously viewed programme.
- 7. PSM (Picture Status Memory)**
recalls your preferred picture setting.
- 8. FAVOURITE**
selects a favorite programme.
- 9. TURBO PICTURE / SOUND BUTTON (option)**
selects Turbo picture and sound.

10. MUTE

switches the sound on or off.

11. TV/AV

selects TV or AV mode.

switches the set on from standby.

12. I/II/* (option)

selects the language during dual language broadcast. (option)

selects the sound output.

13. LIST

displays the programme table.

14. SLEEP

sets the sleep timer.

15. SSM/* (Sound Status Memory) (option)

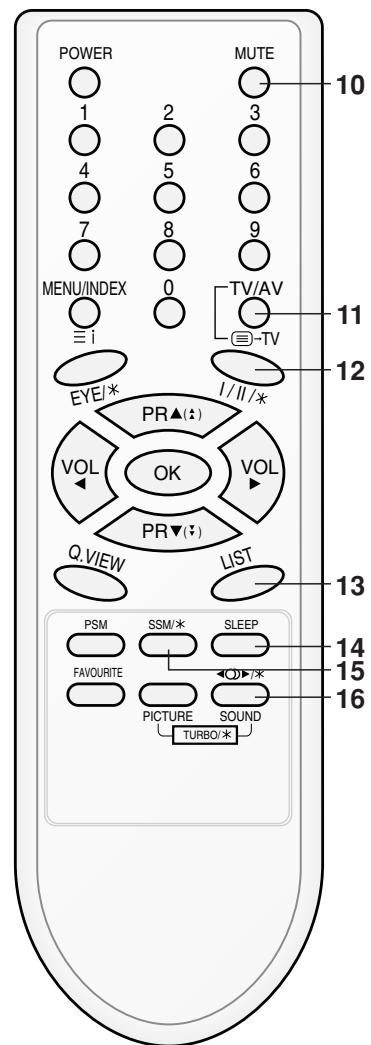

recalls your preferred sound setting.

16. SURROUND (↔*) (option)

selects surround sound.

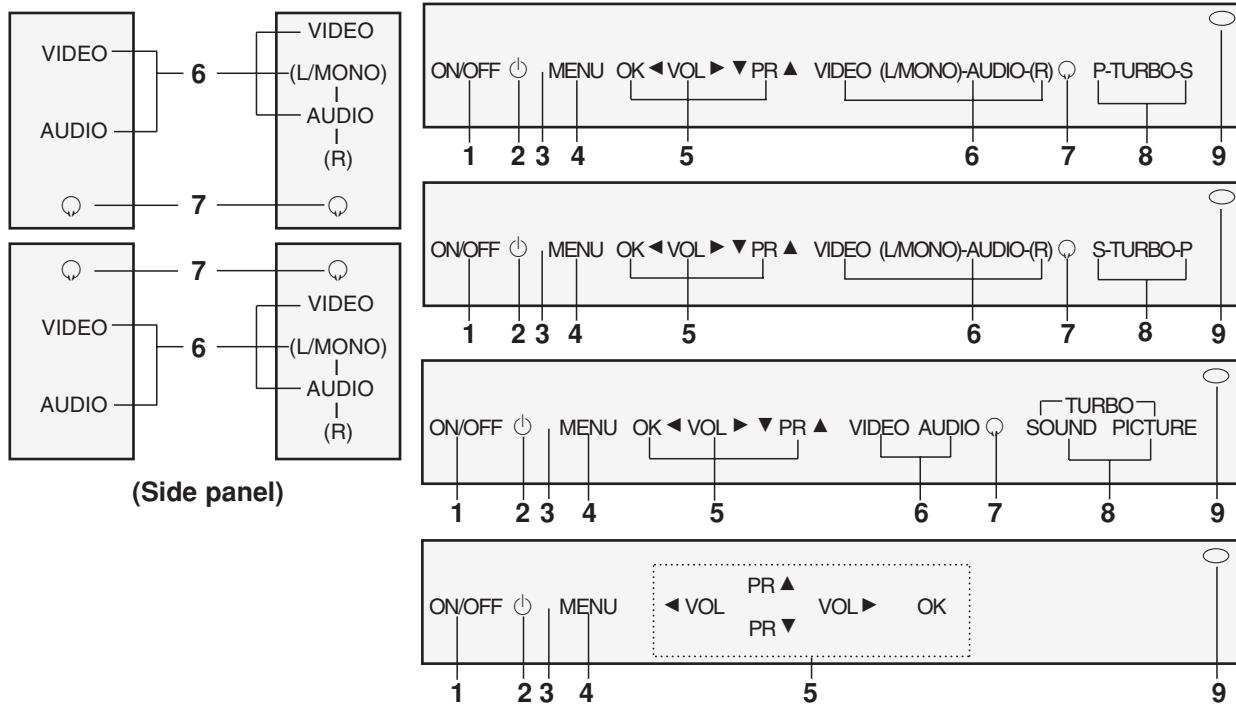

* : No function

COLOURED BUTTONS : These buttons are used for teletext (only TELETEXT models) or programme edit.

Front panel

Shown is a simplified representation of front or side panel.
Here shown may be somewhat different from your set.

- MAIN POWER (ON/OFF)**
switches the set on or off.
- POWER/STANDBY INDICATOR**
illuminates brightly when the set is in standby mode.
dims when the set is switched on.
- REMOTE CONTROL SENSOR**
Note : Only use the supplied remote control handset. (When you use others, they'll be not able to function.)
- MENU**
selects a menu.
- OK**
accepts your selection or displays the current mode.
◀ / ▶ (Volume Up/Down)
adjusts the volume.
▲ / ▼ (Programme Up/Down)
adjusts menu settings.
selects a programme or a menu item.
switches the set on from standby.
- AUDIO(or AUDIO-L/R)/VIDEO IN SOCKETS (AV2) (option)**
Connect the audio/video out sockets of external equipment to these sockets.
- HEADPHONE SOCKET (option)**
Connect the headphone plug to this socket.
- TURBO SOUND/PICTURE (option)**
switches Turbo sound or Turbo picture on or off.
- EYE (option)**
adjusts picture according to the surrounding conditions.

*Note : Shown is a simplified representation of front or side panel.
Here shown may be somewhat different from your set.*

SPECIFICATIONS

Note : Specification and others are subject to change without notice for improvement.

■ Scope

This specification can be applied to all the television related to MC-059B Chassis.

- 4) Specification and performance of each parts are followed each drawing and specification by part number in accordance with BOM.
- 5) The receiver must be operated for about 20 minutes prior to the adjustment.

■ Requirement for Test

Each part is tested as below without special appointment.

- 1) Temperature : $25 \pm 5^{\circ}\text{C}$ ($77 \pm 9^{\circ}\text{F}$), CST : 40 ± 5
(CST must be tested $40 \pm 5^{\circ}\text{C}$. Humidity : 50%)
- 2) Relative Humidity : $65 \pm 10\%$
- 3) Power Voltage : Standard input Voltage (110-240V~, 50/60Hz)
* Standard Voltage of each products is marked by models.

■ Test Method

- 1) Performance : LGE TV test method followed.
- 2) Demanded other specification
 - CCC
 - Safety : IEC60065

■ General specification

No.	Item	Specification
1	Receiving System	PAL BG, DK, I / NTSC M (AV 3.58/ 4.43)
2	Available Channel	VHF : E2 ~ E12 UHF : E21 ~ E69 CATV : S1 ~ S20 HYPER : S21 ~ S41
3	Input Voltage	100 - 240V~, 50/60Hz
4	Market	China, Indonesia, Thai, Vietnam, CIS
5	Screen Size	14 ~ 21inch (FLAT / Conventional)
6	Aspect Ratio	4:3
7	Display Method	CRT
8	Tuning System	FVS
9	Operating Environment	Temp : 0 ~ 40 deg Humidity : ~ 85 %
10	Storage Environment	Temp : -20 ~ 60 deg Humidity : ~ 90 %

■ Features and Function

No.	Item	Specification		Remark
1	Feature	AV Input	2	AV 1, 2
		AV Output	1	Monitor out
		Earphone	1	Front
2	Key	Local Key	Power, Vol(◀, ▶), PR(▼, ▲), MENU, OK

		Auto off	On/ Off	
7	Special	Language	English/ Russia	CIS
			English/ Indonesia/ Thai/ Vietnam	East-Asia
		Input	TV/ AV1/ AV2	
8	Etc.	Child lock	On/ Off	
		Sleep		

ADJUSTMENT

1. Scope of Application

These instructions are applied to MC-059B Chassis.

2. Notes

- 1) Because this is a cold chassis, it is not necessary to use an isolation transformer. However, operating it using a transformer between the power supply line and chassis input to prevent electric shock and to protect the test instrument.
- 2) Adjustment must be done in the correct order.
- 3) The adjustment must be performed in the circumstance of $25 \pm 5^{\circ}\text{C}$ of temperature and $65 \pm 10\%$ of relative humidity if there is no specific designation.
- 4) The input voltage of the receiver must keep ($100\text{-}240\text{~V} \pm 10\%$, $50\text{/}60\text{Hz}$) in adjusting
- 5) The receiver must be operated for about 15 minutes prior to the adjustment. But adjusting on the board can be done in jig state right away.
- 6) Signal: The standard color signal is approved in $65\pm 1\text{dBuV}$.

3. AGC Voltage Adjustment

3-1. Necessary Instrument

Digital Multi meter : 1 set

- Max Input Current : Over 1A / Max Input Voltage : 500Vdc
- Measurement Range : 10mV-100mVdc / Accuracy : 0.03%

3-2. Adjustment Preparation

- 1) Input LG standard signal into 75Ω antenna terminal (or PAL-B/G 05CH)
- 2) Connect the digital multi-meter to terminal (with Hole/J105) with AGC Check.

3-3. Adjustment

- 1) Select the VP 0(RF AGC) adjustment mode by pressing IN-START key on the SVC remote control.
- 2) After select the RF AGC using CH +/- key, adjust the multi-meter voltage to be as shown below.
 - 6700MF0014A(LG INNOTEK): $2.3 \pm 0.05\text{V}$, 65dBu, TAEW-G013D
 - 6700PF0006B(SANYO): $2.3 \pm 0.05\text{V}$, 65dBu, 115-B-A86EL
- 3) CAUTION:
: Since the signal strength can be easily changed by the condition of signal cable, you need to check the signal strength frequently in order to prevent error.

4. Screen Voltage Adjustment

4-1. Adjustment of Screen Manually

(Using SVC Remote Control)

- 1) Receive the PAL(SECAM) signal into RF mode regardless of channel.
- 2) If you press the "ADJ" key on LINE SVC remote control, changes to screen adjustment mode.
- 3) Adjust the Screen Vol. of FBT to appear Horizontal Line and adjust the Screen Vol. of FBT at disappear point Horizontal Line.(Press the Enter(■) key to exit SVC mode)

5. Purity and Convergence Adjustment

5-1. Purity Adjustment

(1) Adjustment Preparation

- 1) Receive Red Raster Pattern for purity adjustment.
- 2) Demagnetize the CPT and Cabinet with a degaussing coil.

(2) Horizontal Line Adjustment

- 1) Pre-adjust the static convergence (STC) with the 4 and 6pole magnet.
- 2) Check if the beam land at mask hole by setting two 2-pole magnets in opposite direction respectively.
- 3) If not, adjust 2-pole magnet so the beam as to land at mask hole accurately.

(3) Purity Adjustment

- 1) Adhere DY closely to CPT.
- 2) Receive Red Pattern and adjust the 2-Pole magnet so Red color Bar as to locate center and make the portion of Green color and Blue color same.<Fig.1>

<Fig. 1>

- 3) Make the full screen Red by pulling DY back slowly. (When adhering DY, use the electric driver of which turning force is lower than 10Kg/Cm) <Fig. 2>

<Fig. 2>

5-2. Convergency Adjustment

(1) Necessary Instrument

- 1) Degaussing Coil
- 2) Convergency fixing instrument

(2) Preliminary steps

- 1) Heat run over 30 minutes before adjustment.
- 2) Demagnetize the CPT and Cabinet by using degaussing coil.
- 3) Receive Cross Hatch Pattern.(EU09CH)
- 4) Adjust Contrast and Brightness for easy observation.

(3) Static Convergence (STC) Adjustment

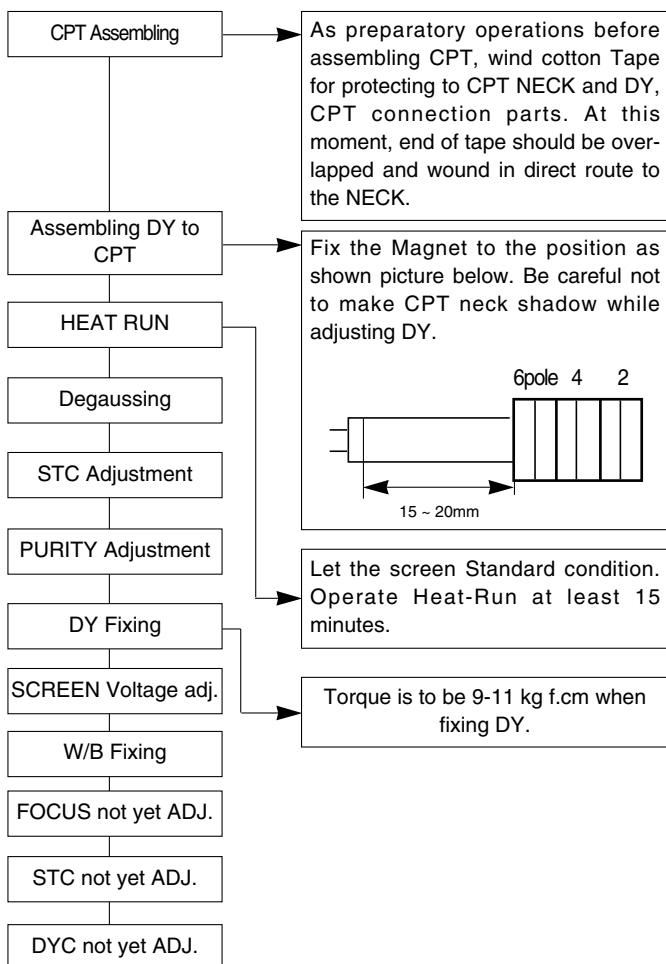

- 1) Receive Cross Hatch Pattern(EU09CH)
- 2) Adjust the focus first seeing to it that the WHITE color picture quality is sharp enough.
- 3) Open two 4-Pole magnets until vertical Red and Blue lines are unified.
- 4) Rotate the 4-Pole magnets keeping the angle between two 4-Pole magnets until horizontal Red and Blue lines are unified.
- 5) Open two 6-Pole magnets until vertical Red and Green lines are unified.
- 6) Rotate the 6-Pole magnets keeping the angle between two 4-Pole magnets until horizontal Red and Blue lines are unified.

(4) Dynamic Convergence (DYC) Adjustment

- 1) Vertical Line Adjustment : Adjust by moving DY right and left
- 2) Horizontal Line Adjustment : Adjust by moving DY up and down.

5-3. block diagram

Adjustment should be operated when using the CPT(without ITC from CPT manufacturing place)

(*In case there is excess RED color, adjust it using the VOLUME - key of the remote control until the RED color disappear.)

Color temperature : 12000°K
X Coordinate : 270±8
Y Coordinate : 283±8

6-4. Adjustment(Manual)

- 1) Adjust using white Balance meter and Factory Remote controller.
- 2) Enter into adjustment mode by pressing the INSTART key
- 3) Use the CH▲, CH▼ Key to choose adjustment item.
- 4) Use the VOL◀, VOL▶ Key to change item data.
- 5) Adjustment Procedure
 - a. Make the picture luminance 45Ft-L by changing the "CONTRAST" and "BRIGHTNESS".
 - b. Adjust X data of High light with R-DRIVE(VP7) and Y data with B-DRIVE(VP9) to have the color temperature as shown below.
 - c. Make the picture luminance 4.5Ft-L by changing the "CONTRAST" and "BRIGHTNESS".
 - d. Adjust X data of low light with R-BIAS(VP4) and Y data with B-BIAS(VP6) to have the color temperature as shown below.
 - e. Repeat steps a~d until both low and high light have same readings as shown below.
 - f. Check the adjusted color coordinates with white balance meter.

Market	Color Temperature	X-AXIS	Y-AXIS
PAL model	14,000°K	266±8	270±8

7. Focus Voltage Adjustment

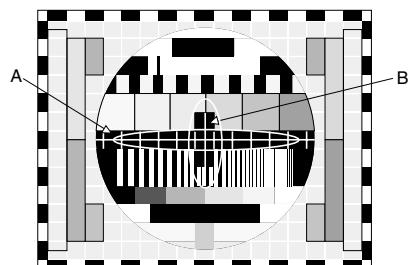

This adjustment must be done after operating the TV set receiver sufficiently.

7-1. Adjustment Preparation

- 1) Receive Digital pattern and Set the PSM condition to "DYNAMIC".

7-2. Adjustment

Adjust the upper Focus volume of FBT for the best focus of horizontal line A, vertical B.

<Fig. 3>

6. White Balance Adjustment

6-1. Necessary Instrument

- 1) Automatic White Balance Meter(Can generate Low/High light Pattern)
- 2) White Balance meter(CRT Color Analyzer, CA-100) :1set
- 3) Factory Remote Control

6-2. Adjustment Preparation

- : Prior to this adjustment, the Screen Voltage adjustment should be finished.

6-3. Automatic adjustment

- 1) Adjust the using Automatic White Balance Meter.
- 2) Adjust in CPU OFF Mode by pressing IN-START, MUTE key on the SVC Remote control. After finishing adjustment, press the TV/AV key to exit.

8. SUB-BRIGHTNESS Adjustment

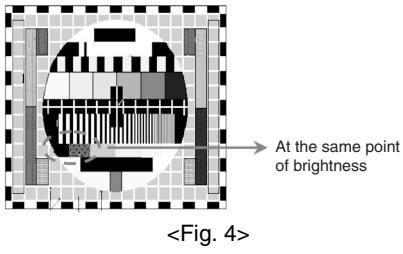

Prior to this adjustment, the White balance adjustment should be finished.

8-1. Adjustment Preparation

- 1) Receive the PAL B/G 5CH signal into RF mode regardless of channel.
- 2) Set the PSM condition to "DYNAMIC".

8-2. Adjustment

- 1) Select SUB-BRIGHT Adjustment Mode by pressing ADJ. key on the SVC Remote control
- 2) At the point of becoming g equal in left 2 boundaries are located in lower Gray Scale of PAL B/G 05CH signal, adjustment is completed by pressing the VOL◀, VOL▶ key on the remote control.

9. Deflection setting data adjustment

This adjustment must be done by automatic adjustment Equipment.

In case of manual adjustment, Adjustment will be done as follows.

9-1. Adjustment Preparation

- 1) Set the Deflection data with the SVC Remote control.
- 2) Select the Deflection adjustment mode by pressing IN-START key.
- 3) Use the CH▲, CH▼ key to select adjustment item.
- 4) Use the VOL◀, VOL▶ key for data changing

9-2. Adjustment

- 1) Horizontal Position Adjustment
Select VP1(H-POS) and adjust until left and right screen are symmetrically equal.
- 2) Vertical Position Adjustment
Select VP2(V-POS) and adjust until the mechanical center point and the center of screen unite
- 3) Vertical Size Adjustment
Select VP3(V-SIZE) and adjust until the smaller inscribed circle of Digital Pattern coincides with the outer frame of screen as figure below.

10. IIC BUS Adjustment Data Table

: Refer to <TABLE 1>

11. Instrument setting data

(automatic adjustment)

<TABLE 2>

	VIDEO IC	EEPROM	Speed	Delay

PRINTED CIRCUIT BOARD

MAIN

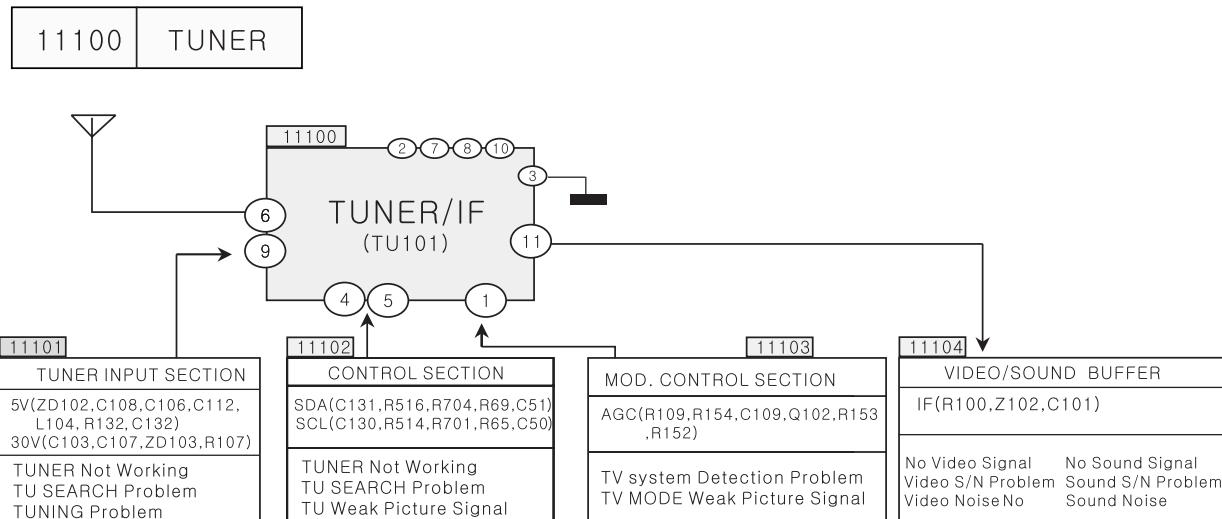

TROUBLE SHOOTING

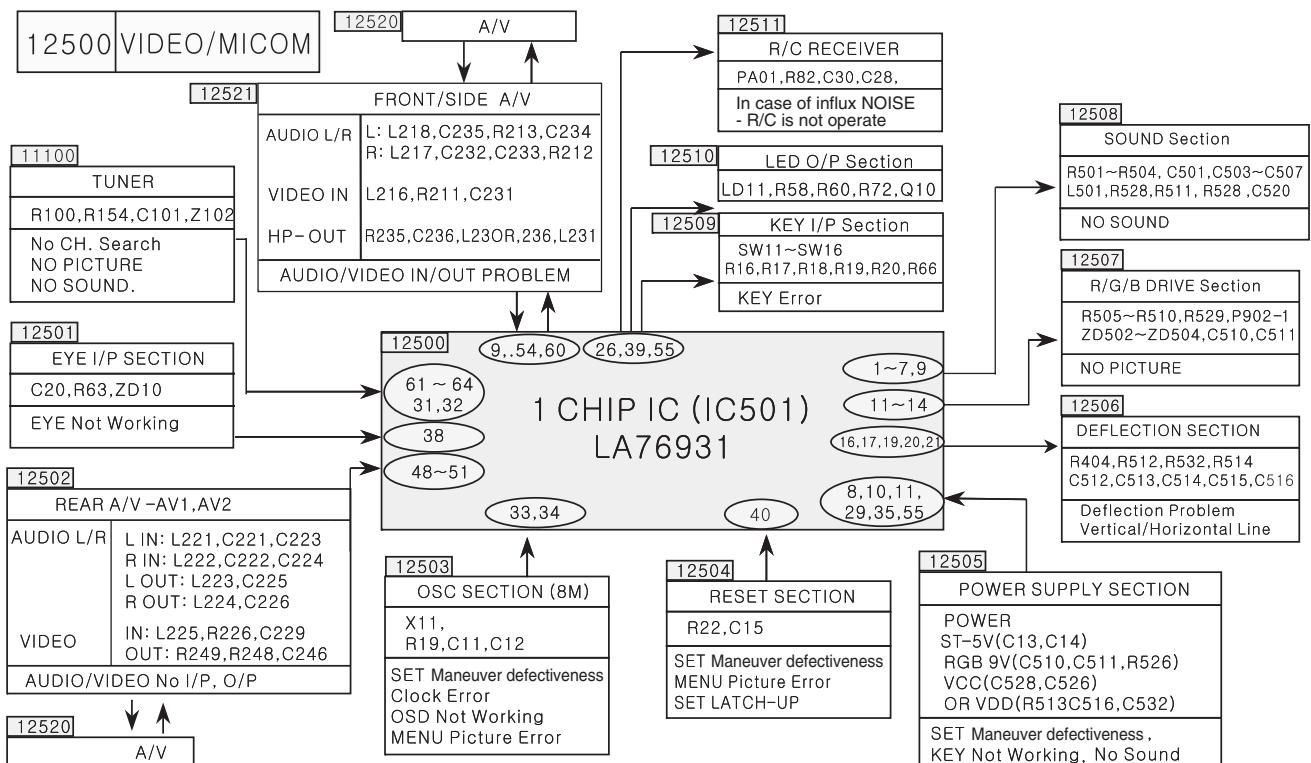

1. TV FUNCTIONAL

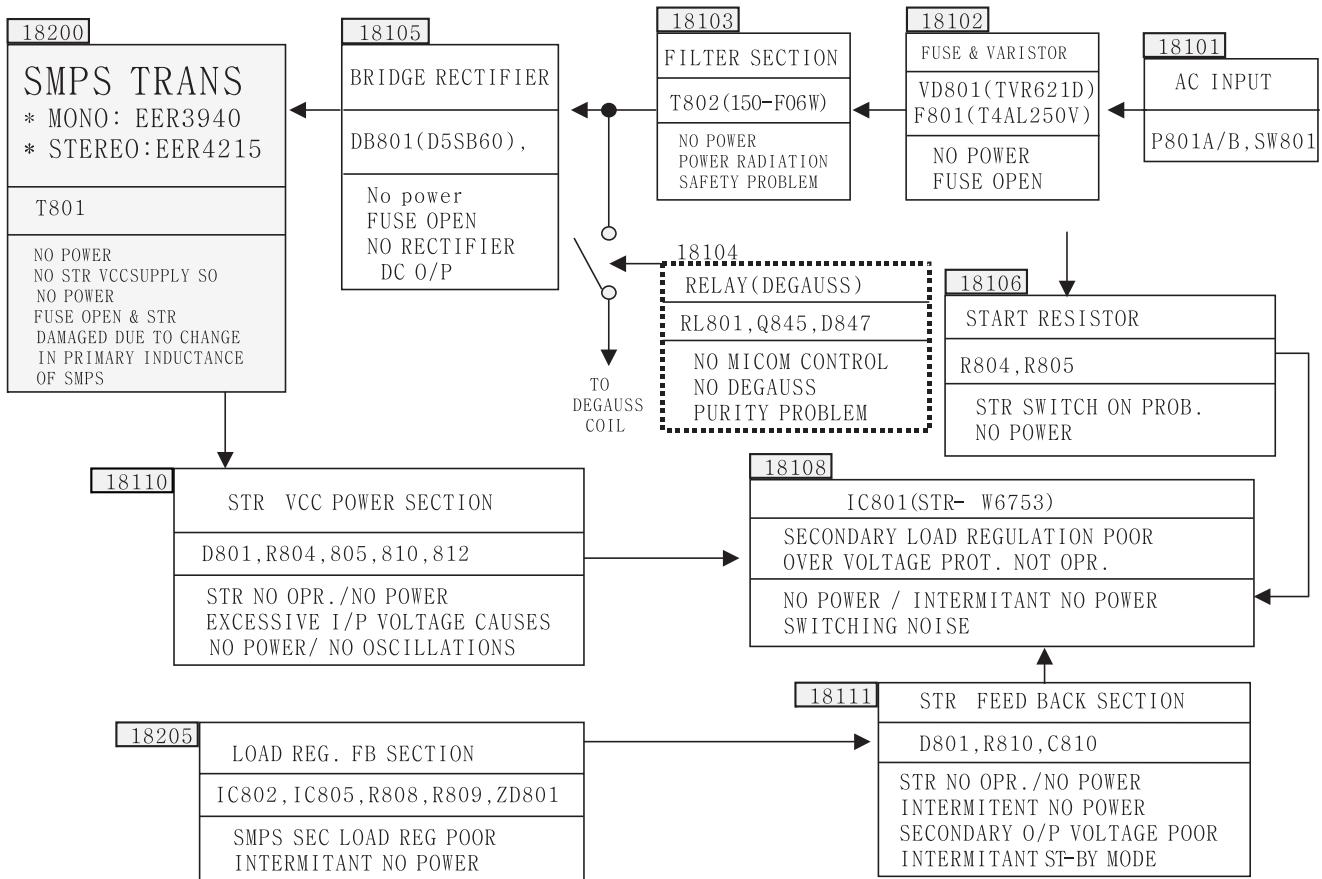

2. TU / IF SECTION

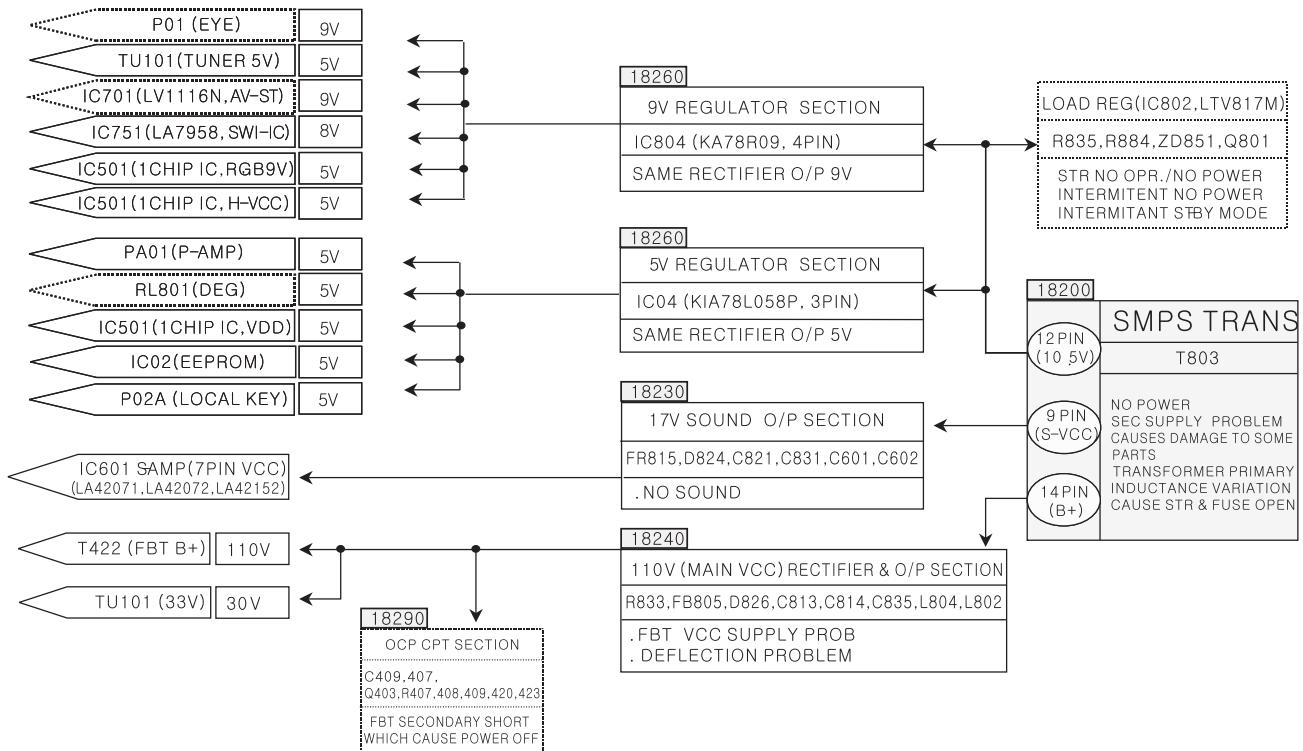

3. VIDEO PROCESSING

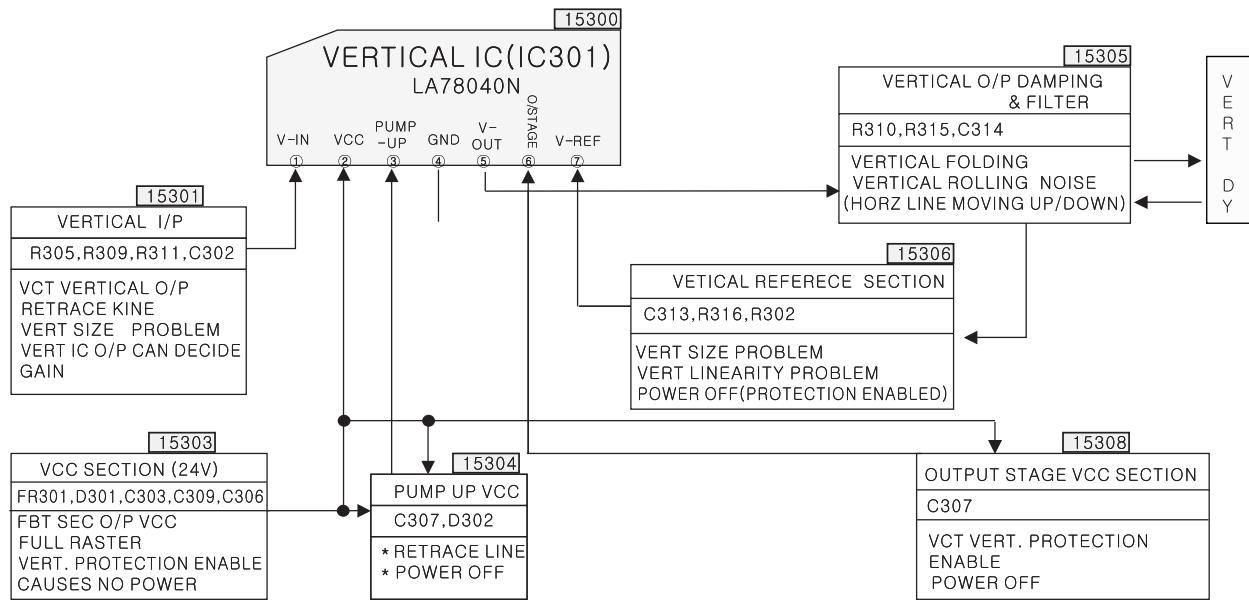

4. SMPS PRIMARY SECTION

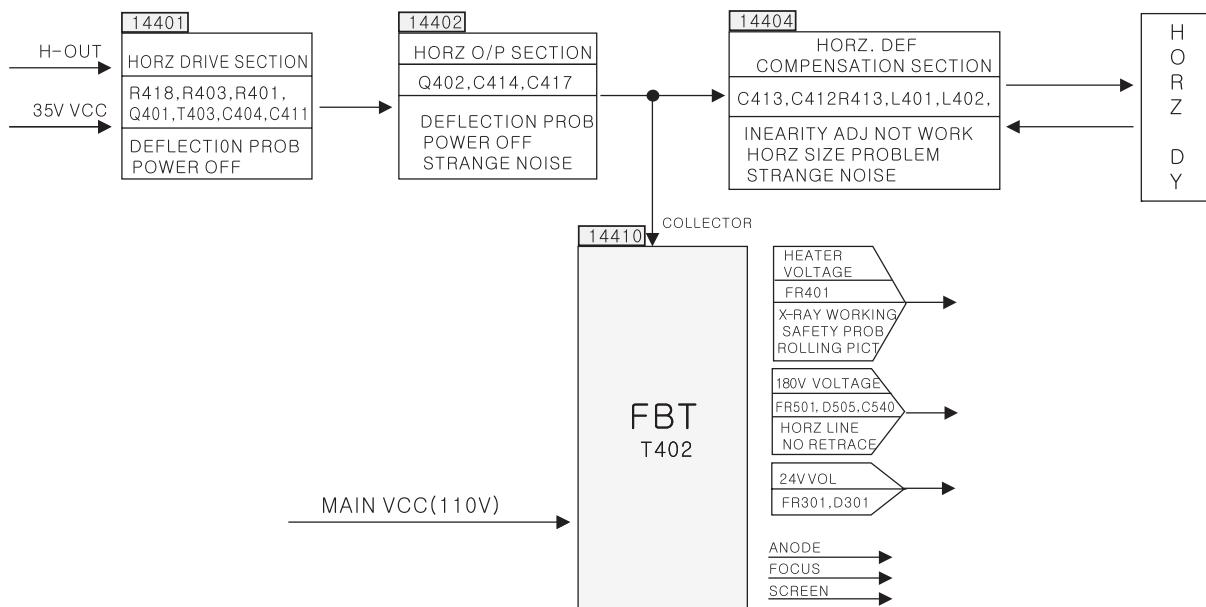

5. SMPS SECONDARY SECTION

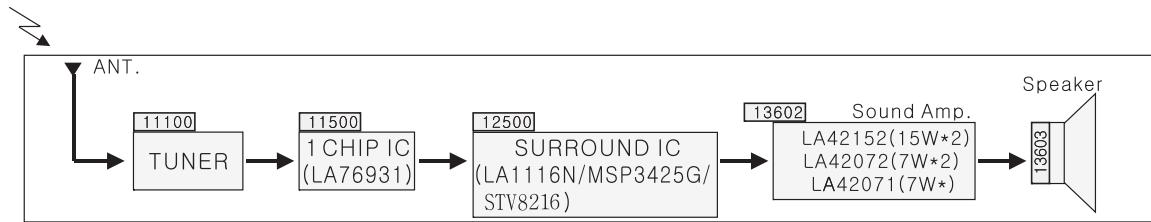

6. VERTICAL SECTION

7. HORIZONTAL SECTION

8. SOUND PROCESSING SECTION

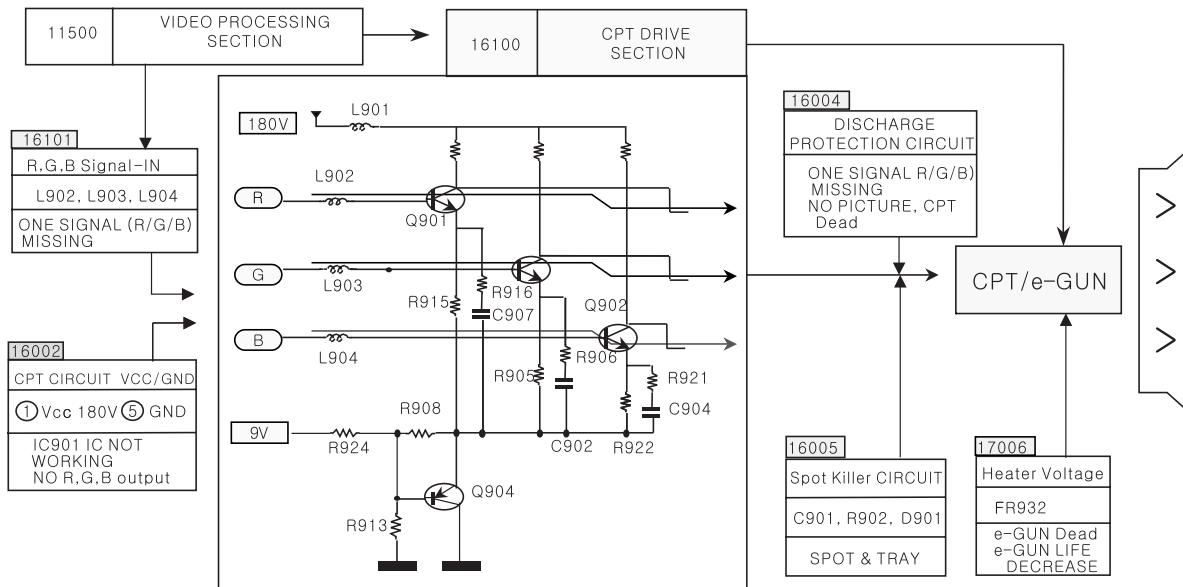

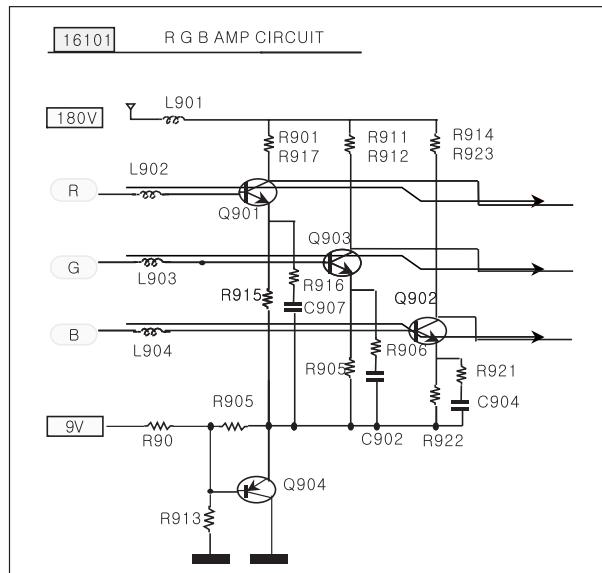

- TUNER : RF signal is feed to TUNER through Antenna. IF output from Tuner is then given to 1 CHIP IC.
- 1 CHIP IC : 1 CHIP IC processes the input IF. Demodulates Picture and sound information and gives analog RGB output for Display and SPKL/R as audio output, this sound output is further Amplified and feed to speakers.
- Sound Amp : Sound amps(LA42152,LA42072,LA42071) is and Audio Amplifier it amplified the output sound signal from Surround ic(LA1116/MSP3425G/ STV8216) and feeds to speaker which generates Sound.

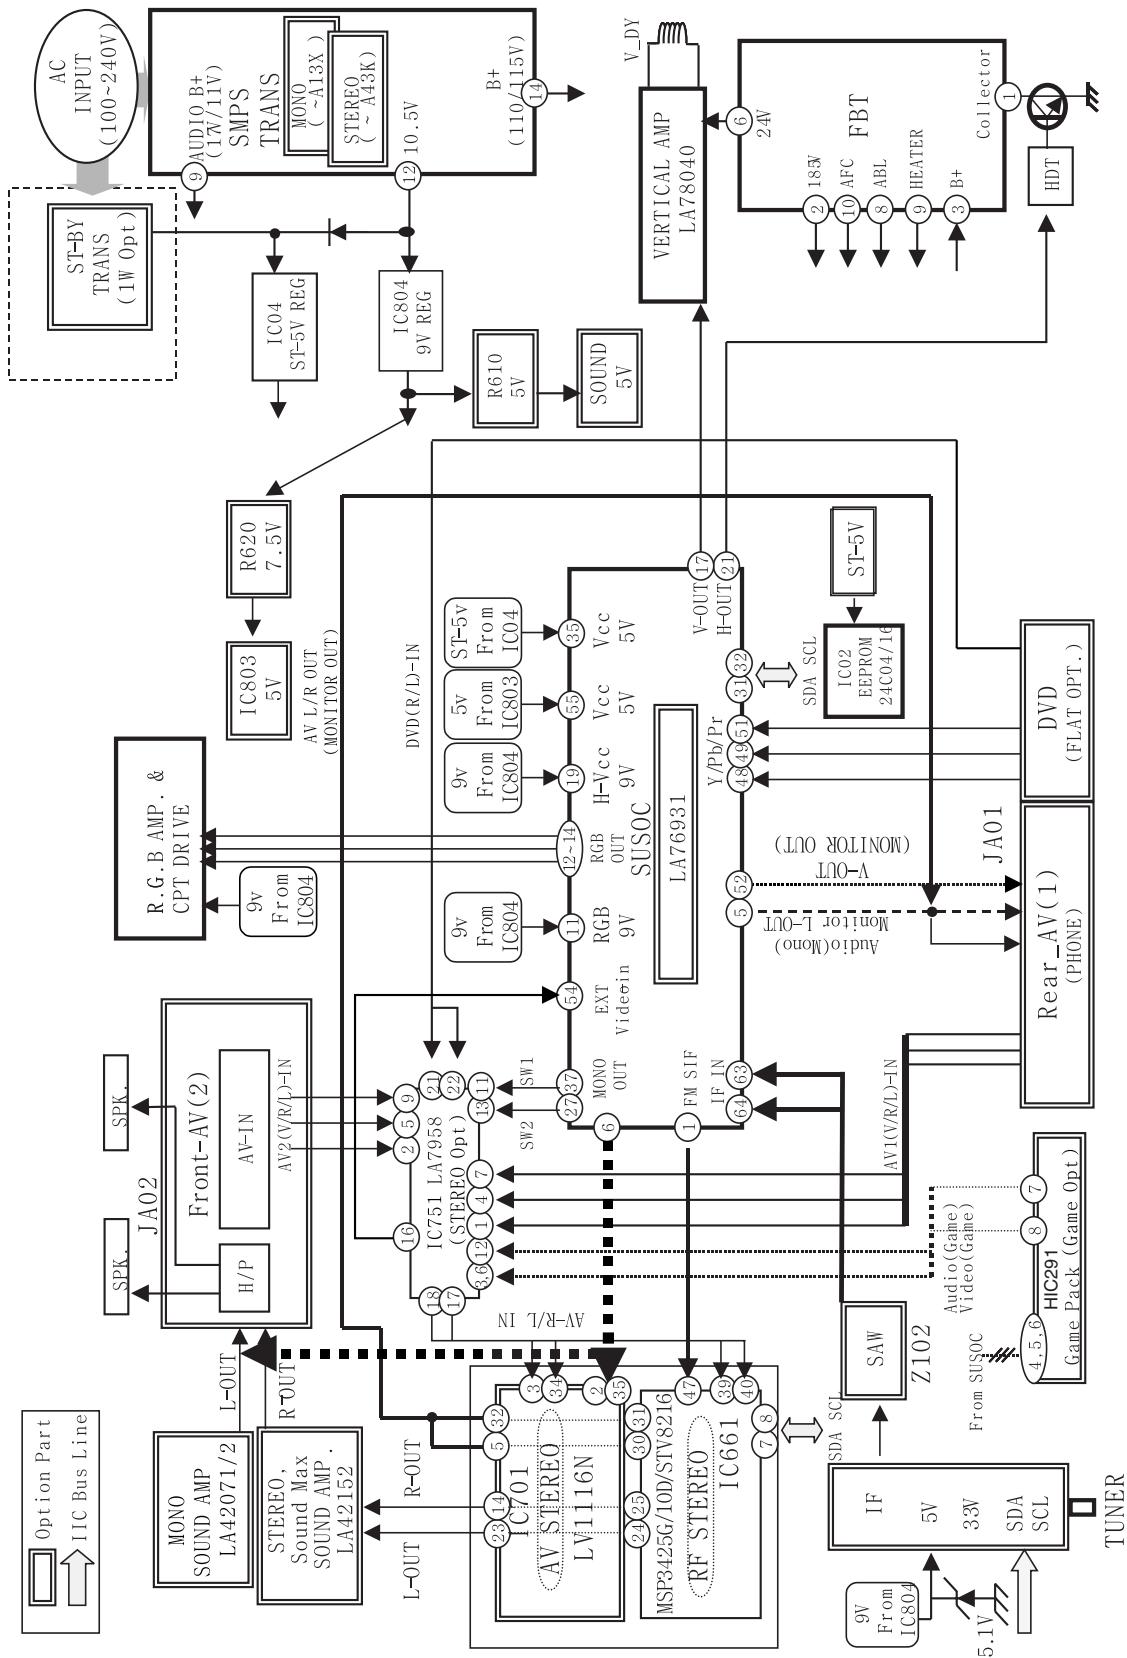

9. CPT DRIVE SECTION

CPT Board Circuit [16100]

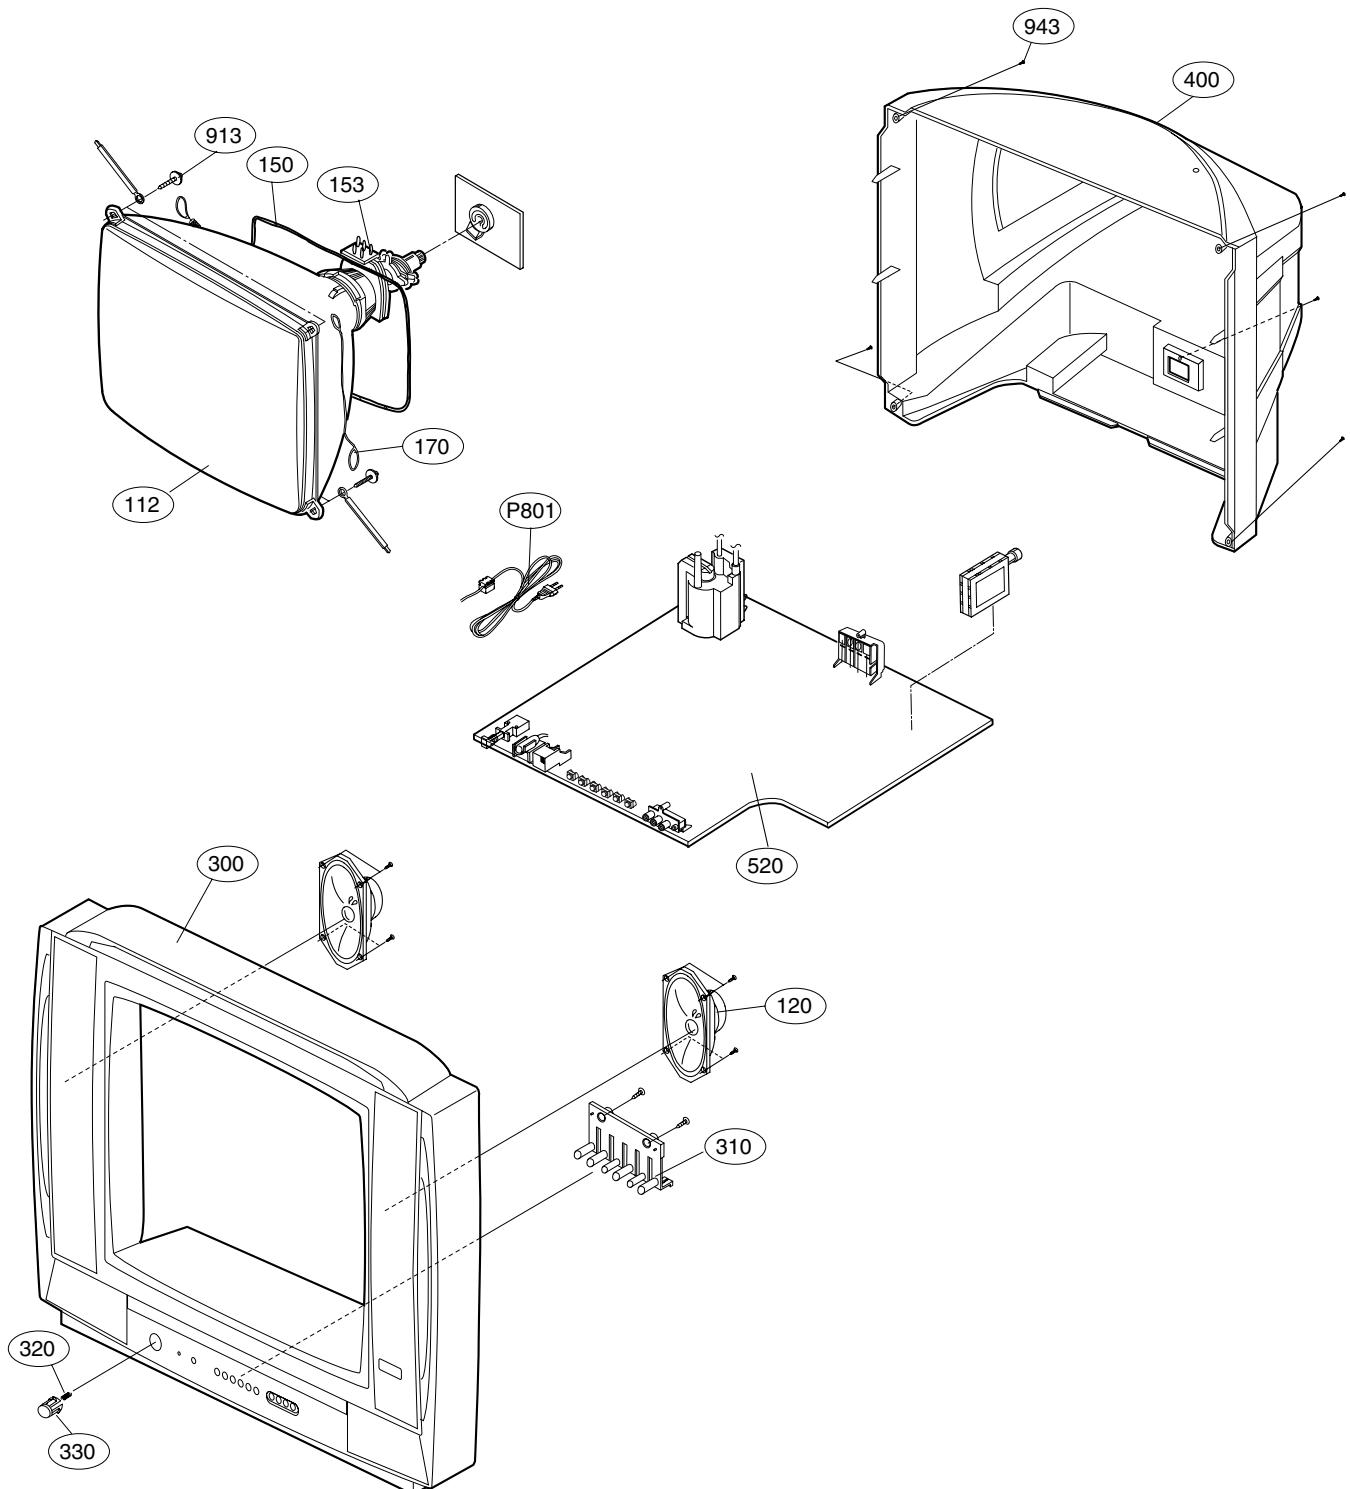

The CPT-BOARD assembly is composed of discrete type RGB Amplifier.
Amp-Gain is defined by Resistance of R901, R911, R914 and R917, R912, R923
High Frequency compensation is made by inductance of L901, capacitance of C907, C904 and C902.
DC level of collector of Q901, Q902 and Q903 is defined by R904 & R905
