## SPECIFICATIONS

### 1. PICTURE TUBE

Size : 14 inch  
 Gun : In-Line  
 Deflection Angle: 90°  
 Neck Diameter : 29.1 mm  
 Phosphor: P22  
 Dot Pitch: 0.28 mm

### 2. SIGNAL

- 2-1 SYNC. INPUT SIGNAL:  
    H.V. Separate TTL Level Posi./Nega.
- 2-2 VIDEO INPUT SIGNAL:  
    RGB ANALOG (0~0.7 Vpp)
- 2-3 SIGNAL CONNECTOR:  
    15 PIN "D" Type
- 2-4 SCANNING FREQUENCY
  - Horizontal: 31.5 KHz/35.2 KHz/35.52 KHz.
  - Vertical: 56 Hz/60 Hz/70 Hz/87 Hz (Interlaced)

### 3. POWER SUPPLY (Factory Preset)

- 3-1 Power Rating  
    AC 98-132V 60Hz, 1.2A Max. (US)  
    AC 196-264V 50Hz, 0.8A Max  
    (Europe/Australian)

### 4. DISPLAY AREA

- 4-1 Active Video Area:  
    VGA, EVGA: 240mm × 180mm  
    8514/A: 250mm × 187mm
- 4-2 Display Color: Full Colors
- 4-3 Display Resolution: 1024 dots × 768 Lines.
- 4-4 Video Bandwidth: 36 MHz.

### 5. EXTERNAL CONTROL

- 5-1 Front: Power ON/OFF Switch,  
    Contrast, Brightness  
    (See Fig. 1)
- 5-2 Rear: V-Size  
    H-Size  
    V-Center  
    H-Position  
    (See Fig. 1)

### 6. ENVIRONMENT

- 6-1 Operating Temperature: 10 to 41°C  
    (Ambient)
- 6-2 Relative Humidity: 8 to 80%  
    (noncondensing)
- 6-3 Altitude: 10,000ft

### 7. DIMENSIONS

	CQ430	CQ432
Width	356mm(14.0 in)	356mm(14.0 in)
Depth	375mm(14.7 in)	375mm(14.7 in)
Height	308mm(12.1 in)	309mm(12.2 in)
H(With T/S)	358mm(14.1 in)	354mm(14.0 in)

### 8. WEIGHT (W/Tilt Swivel)

- Net Weight: 11.5 Kg (25.3 lbs.)
- Gross Weight: 13 Kg (28.6 lbs.)

# PREFACE

## SAFETY PRECAUTIONS

### SAFETY-RELATED COMPONENT WARNING!

There are special components used in GoldStar color monitor which are important for safety. These parts are marked ( $\Delta$ ) on the schematic diagram and on the replacement parts list. It is essential that these critical parts should be replaced with the manufacture's specified parts to prevent X-RADIATION, shock, fire or other hazards. Do not modify the original design without obtaining written permission from GoldStar or this will void the original parts and labor guarantee.

**CAUTION:** No modification of any circuit should be attempted.

Service work should be performed only after you are thoroughly familiar with all of the following safety checks and servicing guidelines.

### SAFETY CHECK

Care should be taken while servicing this color monitor because of the high voltage used in the deflection circuits. These voltages are exposed in such areas as the associated flyback and yoke circuits.

### FIRE & SHOCK HAZARD

- An isolation transformer must be inserted between the color monitor and AC power line before servicing the chassis.
- In servicing, attention must be paid to the original lead dress especially in the high voltage circuit. If a short circuit is found, replace all parts which have been overheated as a result of the short circuit.
- All the protective devices must be reinstalled per original design.
- Soldering must be inspected for the cold solder joints, frayed leads, damaged insulation, solder splashes or the sharp points. Be sure to remove all foreign materials.

### IMPLOSION PROTECTION

All used display tubes are equipped with an integral implosion protection system, but care should be taken to avoid damage and scratching during installation. Use only same type display tubes.

### X-RADIATION

The only potential source of X-Radiation is the picture tube. However, when the high voltage circuitry is operating properly there is no possibility of an X-Radiation problem. The basic precaution which must be exercised is to keep the high voltage at the factory-recommended level: the nominal high voltage is 25KV and must not exceed 30KV at zero beam current at rated voltage. The following steps describe how to measure the high voltage and how to prevent X-radiation.

**Note:** It is important to use an accurate high voltage meter calibrated periodically.

- To measure the high voltage, use a high impedance high voltage meter, Connect (-) to chassis and (+) to the CRT anode button.
- Turn the brightness control fully clockwise.
- Measure the high Voltage. The high voltage meter should indicate at the factory-recommended level.
- If the upper meter indication exceeds the maximum level, immediate service is required to prevent the possibility of premature component failure.
- To prevent X-Radiation possibility, it is essential to use the specified picture tube.

### CAUTION:

Please use only plastic screwdriver for shock protection during service operation.

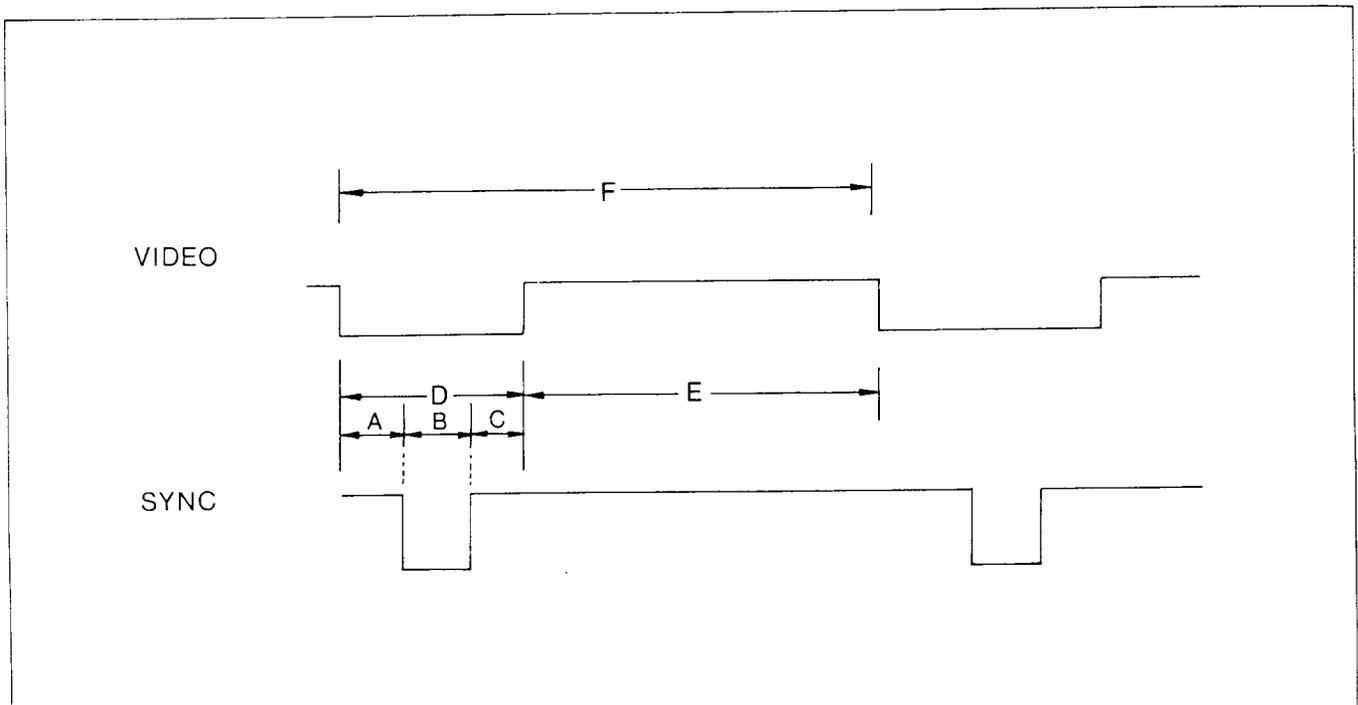

## FEATURES

The CQ430 (1460/1455 PLUS), CQ432 Color Monitor is a high-quality, high-content Analog Display. It has the following features:

- 14 inch Color Display
  - 3 Different, independent lines to drive the display
    - a RED, a GREEN and a BLUE Line.
  - 36 MHz Bandwidth.
- High-Resolution CDT (Color Display Tube) Displays; Horizontal 1024 dots, vertical 768 lines without blurring the characters.

- Analog-Compatibility at a H-frequency of 31.5 KHz/35.2 KHz/35.52 KHz.
- Customer Diagnostic Self-Test patterns.

## TIMING CHART

## CONTROLS LOCATION

The CQ430(1460/1455 PLUS), CQ432 Color Monitor uses a 15-pin "D" type connector for Analog input. Figure 1 shows the monitor controls on the front and rear panels.

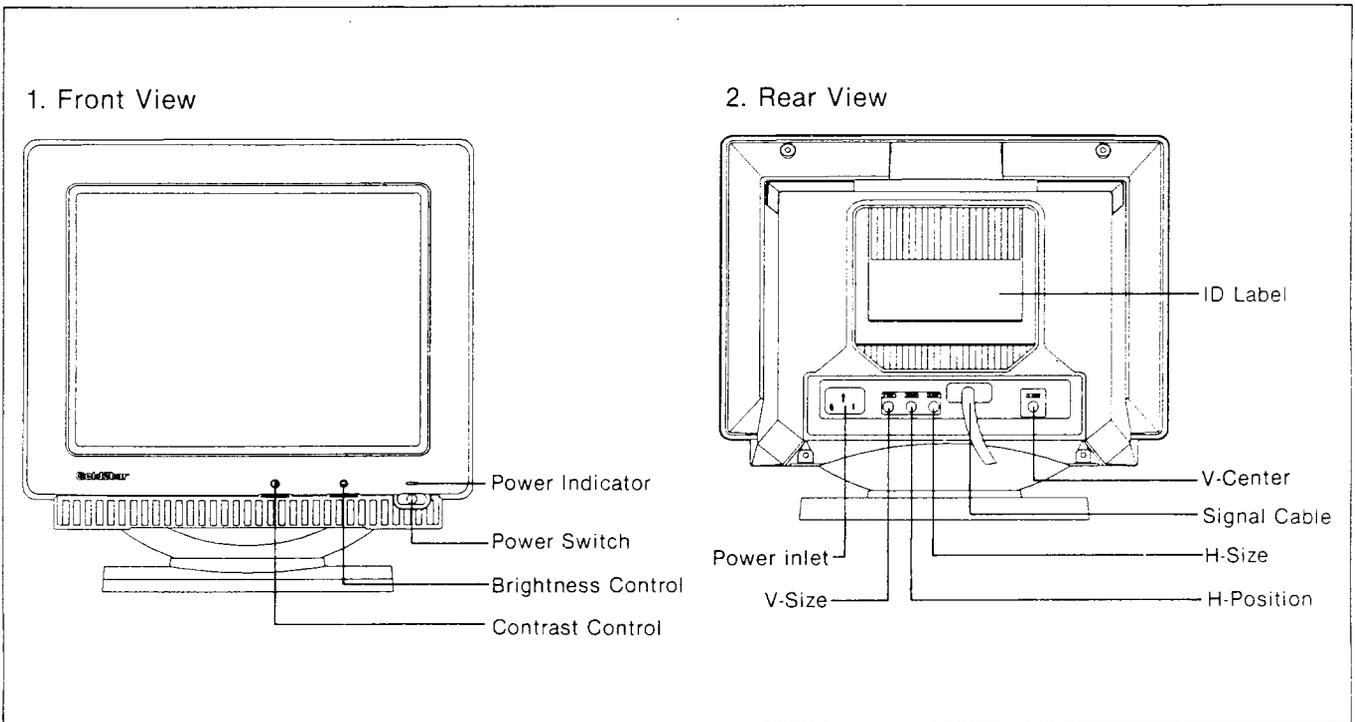

Figure 1, Monitor Controls

- **POWER (PUSH-ON)**  
The power switch is push button type.  
Push this button, the power is ON.  
Push this button again, the power is OFF.
- **CONTRAST (VR709)**  
Slide this knob to right side to increase contrast.
- **BRIGHTNESS (VR710)**  
Slide this knob to right side to increase brightness.
- **V-SIZE (VR606)**  
Turn this control to adjust the vertical size of the display.
- **H-SIZE (VR701)**  
Turn this control to adjust the horizontal size of the display.
- **V-CENTER (VR610)**  
Turn this control to adjust the vertical position of the display.
- **H-POSITION (VR708)**  
Turn this control to adjust the image center of the display.

## CIRCUIT DESCRIPTION

### POWER SUPPLY

The power supply is a SMPS (Switching Mode Power Supply) that consists of switching IC(IC901), SMPS transformer (T902) pulse transformer (T901), over current protection transistor (Q901) and the associated components. The primary winding of the SMPS transformer is applied the pulse by operating IC901. Therefore, rectified DC output voltage is obtained by the secondary winding of SMPS transformer T902.

### POWER SUPPLY DESCRIPTIONS

This SMPS (Switching Mode Power Supply) using STR53041(STR58041: 220V) obtains rectified DC 100V, 88V, 67V, 18V, 14V, 6V from AC120V, 60Hz (USA Version)/AC 220V, 50Hz (Europe version).

Power is supplied in the following procedure:

- 1) AC120V/AC220V supplied from the AC socket is rectified by D901.
- 2) Rectified voltage is supplied to the T902.  
The primarily rectified voltage by D901 is supplied to PIN 7 of T902 through PIN 5 of T902.
- 3) A switching pulse is applied at PIN 2 of the IC901.
- 4) This oscillation causes IC901 to switched, and at the secondary terminal of T902, a voltage (proportional to the turn ratio) is generated.

### HORIZONTAL AFC AND OSCILLATION LIMITTER

The AFC circuit consists of phase detection circuit of IC701 and the associated components. The oscillation limit circuit is necessary to prevent the pulse from excessive high voltage. This circuit is located in IC702 and controls the oscillator to maintain the control signal in its correct frequency and in phase with the horizontal sync signal.

### HORIZONTAL DRIVE CIRCUIT

To obtain horizontal drive pulses from IC702 PIN 12, the horizontal osciallator must be working.

Horizontal drive pulses from IC702 PIN 12 are applied to horizontal drive transformer and drive transistor Q702.

The B + for T701 is supplied from the 14V line.

### HORIZONTAL DEFLECTION OUTPUT

Horizontal drive pulses from IC702 PIN 12 are coupled through T701 to the base of horizontal output Q707. Transistor Q702 is biased on when the beam is at about mid-screen.

The charge stored in C722 causes current to flow through the horizontal yoke winding and Q707 to ground. When the beam reaches the right side of the screen, Q702 is turned off, and the current in the yoke is directed into C721 and C723.

At the same time current flows into C721 and C723 from the regulated B + via the horizontal choke coil (L702) winding.

Due to resonance, the current then reverses and flows back through the horizontal yoke winding into C722 and C719.

### X-RAY PROTECTION CIRCUIT

The X-RAY protection circuit consists of D701, D702, R718, R719, R720, VR717 and the associated component that connected to PIN 13 of IC702. A voltage from the FBT PIN 5 is divided by R720 and VR717. Under normal operating conditions, the resultant voltage (TP1) maintains the specified value.

If a malfunction causes exeessive high voltage, the voltage of FBT PIN 5 is increasing and TP1 voltage is increasing. As a result, D701 is conducted when the cathode voltage of D701 is arrived as much as Zener voltage. A voltage increase at IC702 PIN 13 makes the X-RAY protection circuit conduct, and the horizontal oscillation operation no longer functional. The circuit latches as above, and it is necessary for the circuit to turn the power off for at least 30 seconds to function again.

### VERTICAL OSCILLATION/DRIVE CIRCUIT

The time constant circuit that determines the vertical osciallation frequency consists of C604, R606 and R607. (IC701 PIN 18).

The vertical ramp generator output circuit (IC603 PIN 6) is driven by the vertical sync. negative polarity pulse from the IC702 PIN 16.

The negative feedback waveform at IC603 PIN 7 driven from the vertical deflection output is applied to the other input of the differential amplifier.

# ADJUSTMENT

## GENERAL INFORMATION

All adjustments are thoroughly checked and corrected when the monitor leaves the factory.

Therefore the monitor should operate normally and produce proper color and pictures upon installation. However, several minor adjustments may be required depending on the particular location in which the monitor is to operate. This monitor is shipped completely in carton. Carefully draw out the monitor from the carton and remove all packing materials.

Check and adjust all the customer controls such as Brightness and Contrast to obtain a normal picture.

## AUTOMATIC DEGAUSSING

A degaussing coil mounted around the picture tube so that external degaussing is normally unnecessary after moving the monitor. The monitor should be properly degaussed upon installation. The degaussing coil switched on.

If the set is moved or faced in a different direction, the power switch must be switched off for at least 10 minutes in order that the automatic degaussing circuit operates properly.

Should the chassis or parts of the cabinet become magnetized to cause poor color purity, use an external degaussing coil. Slowly move the degaussing coil around the faceplate of the picture tube, the sides and front of the monitor, and slowly withdraw the coil to a distance of about 2 meters before disconnecting it from the AC source. If color shading still persists, perform the convergence adjustment procedures, as mentioned later.

## HORIZONTAL HOLD ADJUSTMENT

1. Disconnect the signal cable from signal source.
2. Connect the ground terminal of frequency counter to chassis ground and the other terminal to red covered wire of DY connector.
3. Adjust VR716 (H.HOLD), so that the horizontal frequency is  $35.34 \pm 0.05$  kHz.

## H.RASTER CENTER ADJUSTMENT

1. Disconnect the signal cable from the signal source.
2. Adjust VR714, so that the raster position is horizontal center.

## VERTICAL LINEARITY ADJUSTMENT

1. Display the MODE 3 crosshatch pattern on the monitor.
2. Adjust VR611, so that the vertical linearity should be best condition.

## VERTICAL SIZE ADJUSTMENT

1. Set the V.Size control (VR606) to center (locked position).
2. Display the crosshatch pattern at VGA mode 1.
3. Adjust Sub V.Size control (VR601), so that the vertical size of the image is  $180 \pm 2$  mm.
4. Display the crosshatch pattern at VGA mode 2.
5. Adjust Sub V.Size control (VR602), so that the vertical size of the image is  $180 \pm 2$  mm.
6. Display the crosshatch pattern at VGA mode 3.
7. Adjust Sub V.Size control (VR603), so that the vertical size of the image is  $180 \pm 2$  mm.
8. Display the crosshatch pattern at EVGA mode.
9. Adjust Sub V.Size control (VR605), so that the vertical size of the image is  $180 \pm 2$  mm.
10. Display the crosshatch pattern at 8514/A MODE.
11. Adjust Sub V.Size control (VR604), so that the vertical size of the image is  $187 \pm 2$  mm.

## SIDE PINCUSHION ADJUSTMENT

1. Display the crosstatch pattern at VGA mode 3.
2. Adjust VR711 and VR712, so as to minimize the side pincushion distorion.

## H.POSITION ADJUSTMENT

1. Set the H.Position control (VR708) to center (locked position).
2. Display the crosshatch pattern at VGA mode 3.
3. Adjust Sub H.Phase VR.(VR705), so that the image is horizontal center position.
4. Display the crosshatch pattern at EVGA mode.
5. Adjust Sub H.Phase VR.(VR707), so that the image is horizontal center position.
6. Display the crosshatch pattern at 8514/A mode.
7. Adjust Sub H.Phase VR.(VR706), so that the image is horizontal center position.

For Service Manuals  
**MAURITRON SERVICES**  
8 Cherry Tree Road, Chinnor  
Oxfordshire, OX9 4QY.  
Tel (01844) 351694  
Fax (01844) 352554  
email:- mauritron@dial.pipex.com

## H.SIZE ADJUSTMENT

1. Set the H.Size control (VR701) to center (locked position).
2. Display the crosshatch pattern at VGA mode 3.
3. Adjust Sub H.Size VR.(VR702), so that the horizontal size is  $240 \pm 2$  mm.
4. Display the crosshatch pattern at EVGA mode.
5. Adjust Sub H.Size VR.(VR704), so that the horizontal size is  $240 \pm 2$  mm.
6. Display the crosshatch pattern at 8514/A mode.
7. Adjust Sub H.Size VR.(VR703), so that the horizontal size is  $250 \pm 2$  mm.

## WHITE BALANCE ADJUSTMENT

### 1. THE NECESSARY INSTRUMENT

- White Balance meter.
- External Degaussing Coil (Degauss the monitor before adjustment).
- Photometer

### 2. PREPARING ADJUSTMENT

- Connect the signal cable with PC, and display the Color 0.0 pattern on the monitor.
- Minimize the screen control of FBT.
- Set the Sub Bright (VR713) and the Sub Contrast (VR715) to mechanical center.
- Set the Contrast VR to the MAX and Bright VR to the MAX.
- Set the G drive (VR301) and the B drive (VR302) to mechanical center.
- Turn the R cut-off VR. (VR305), B cut-off VR. (VR303) to counter-clockwise extremely and set the G cut-off VR.(VR304) to mechanical center (about  $90^\circ$ ).

### 3. ADJUSTMENT (1)

- Turn the screen control (G2) to clockwise slowly until the brightness of raster is  $1 \sim 1.2$  FL.
- Let the G cut-off VR.(VR304) be the reference, and adjust the R and the B cut-off VR.(VR305, VR303) so as to get  $X = 0.282$ ,  $Y = 0.304$ .

### 4. ADJUSTMENT (2)

- 1) Set Brightness VR to center and contrast VR to maximum.
- 2) Display Full White Pattern (Color 7.0) on the screen.
- 3) Turn the B drive (VR302) so that  $X = 0.282$  and the G drive (VR301) so that  $Y = 0.304$ .
- 4) Repeat 3) until  $X = 0.282 \pm 0.02$ ,  $Y = 0.304 \pm 0.022$ .
- 5) Set Brightness VR to MIN. and adjust contrast VR until luminance is 5 FL at Full White Pattern (Color 15,0).
- 6) Confirm  $X = 0.282 \pm 0.02$ ,  $Y = 0.304 \pm 0.022$  unless the color co-ordinate is not in spec, readjust G, B cut-off VR so that the screen is white.
- 7) Repeat 3),4),5),6) so that the screen should be white.

## BRIGHTNESS ADJUSTMENT

1. Maximize the Contrast VR.
2. Display the cut-off level (Color 0.0).
3. Adjust the Sub-Bright VR.(VR713) until the raster disappears when the Bright VR is at center.
4. Confirm that whether back raster appears or not when the Bright VR is at Max.

## CONTRAST ADJUSTMENT

1. Set the Bright VR at center and Contrast VR at Max.
2. Display the Full White Pattern (Color 7,0), of which the size is  $70 \times 70$ , on the screen.
3. At the center of the screen, adjust the Sub Contrast VR.(VR715), so that the luminance should be  $X \pm 2$  FL.

**Note:** The value of X is dependent on the type of CDT.

Medium short: 25  
Medium : 16

## FOCUS ADJUSTMENT

1. Set the Bright VR and Contrast VR to Max.
2. Display "H" character in full screen (Color 7,0)
3. Adjust Focus VR of FBT, so that the focus should be best condition.

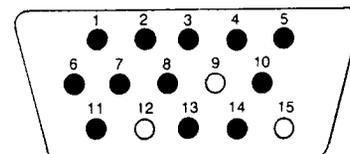

## CONFIRMING SELF-TEST

1. Set the Bright VR and the contrast VR at Max.
2. Remove the signal connector from the PC.
3. Confirm that the brightness of raster is more than 5 FL.

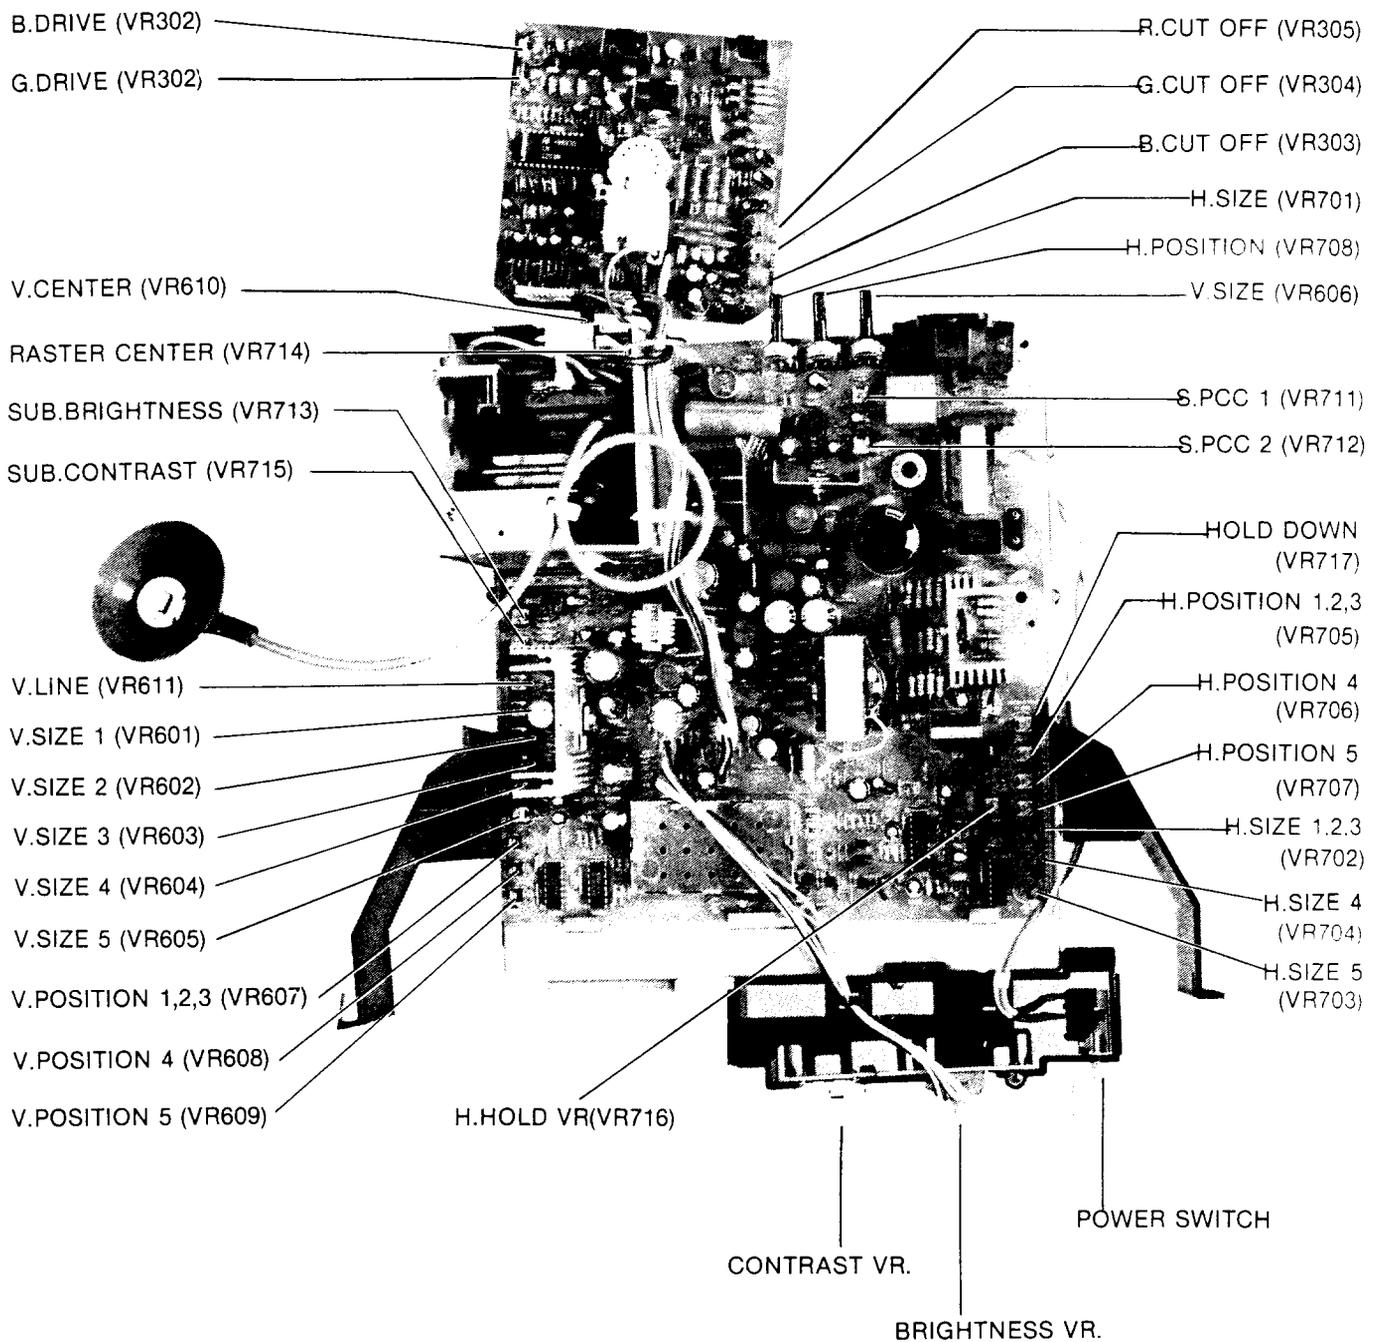

## FAIL SAFETY ADJUSTMENT

1. Set the Bright VR and Contrast VR at MIN.
2. Display the crosshatch pattern at VGA mode 3.
3. Confirm that B+ of FBT (pin 2) is  $88 \pm 1V$ .
4. Adjust the HOLD-DOWN VR.(VR717) so that the TP1 voltage should be  $10.5 \pm 0.05$  V.
5. Fasten the VR717 with glue or as such so as not to be changed after adjustment is done.

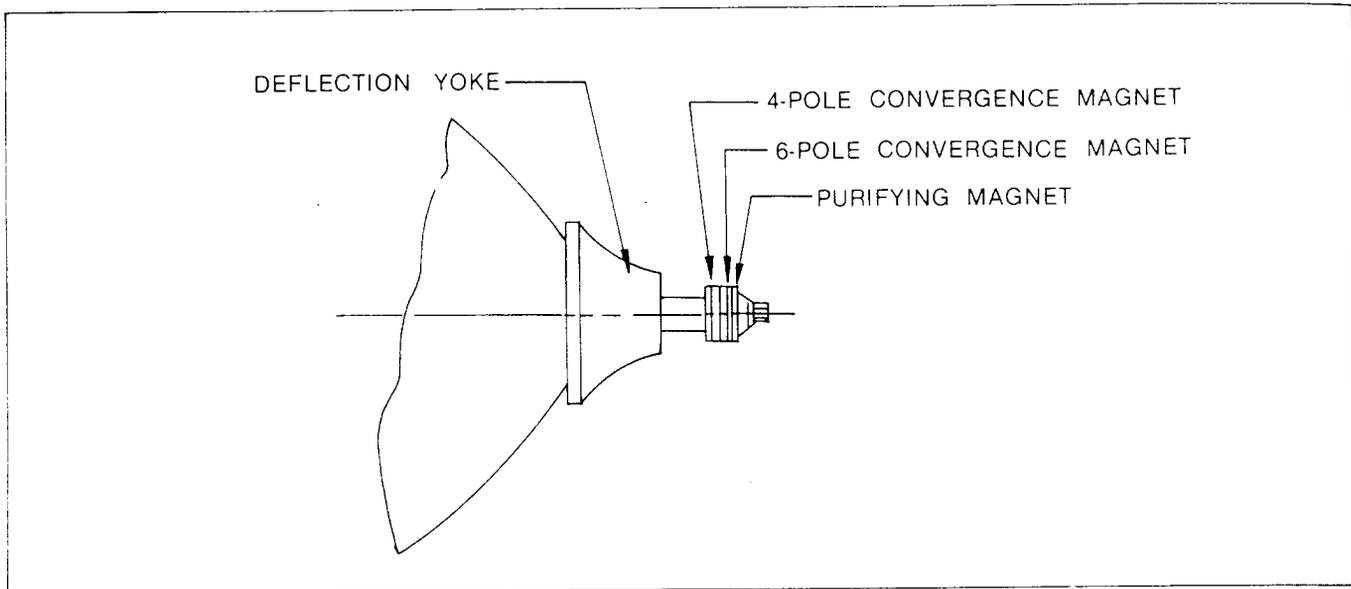

### 15 Pin Connector (Male) to the Computer

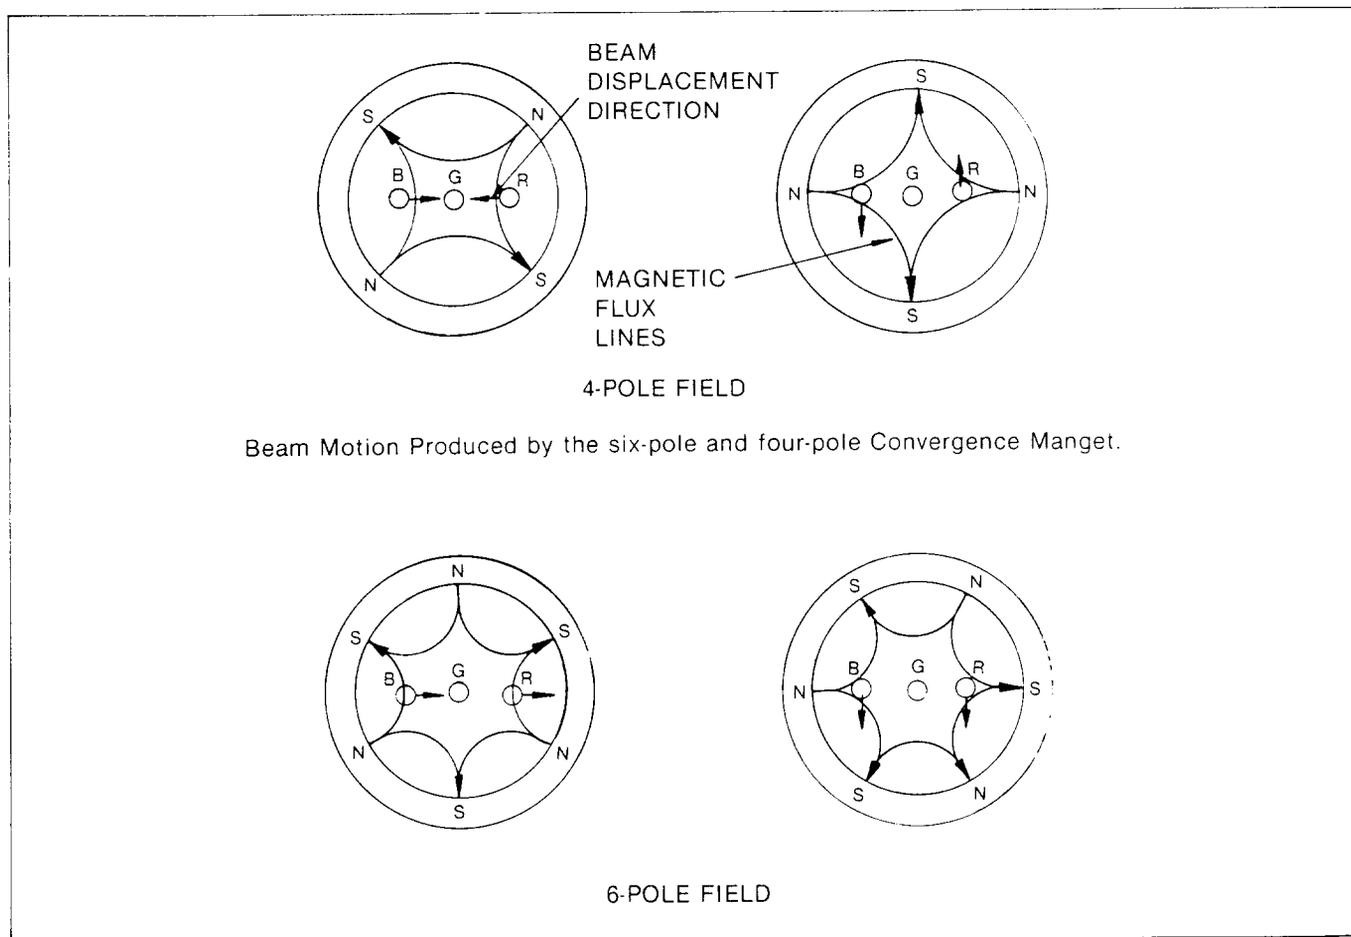

1. Red	6. Red GND	11. ID 0 (GND)
2. Green	7. Green GND	12. ID 1 (No Pin)
3. Blue	8. Blue GND	13. H-Sync
4. ID 2 (GND)	9. No Pin	14. V-Sync
5. Self Test	10. Digital GND	15. No Pin

# TROUBLE SHOOTING GUIDE

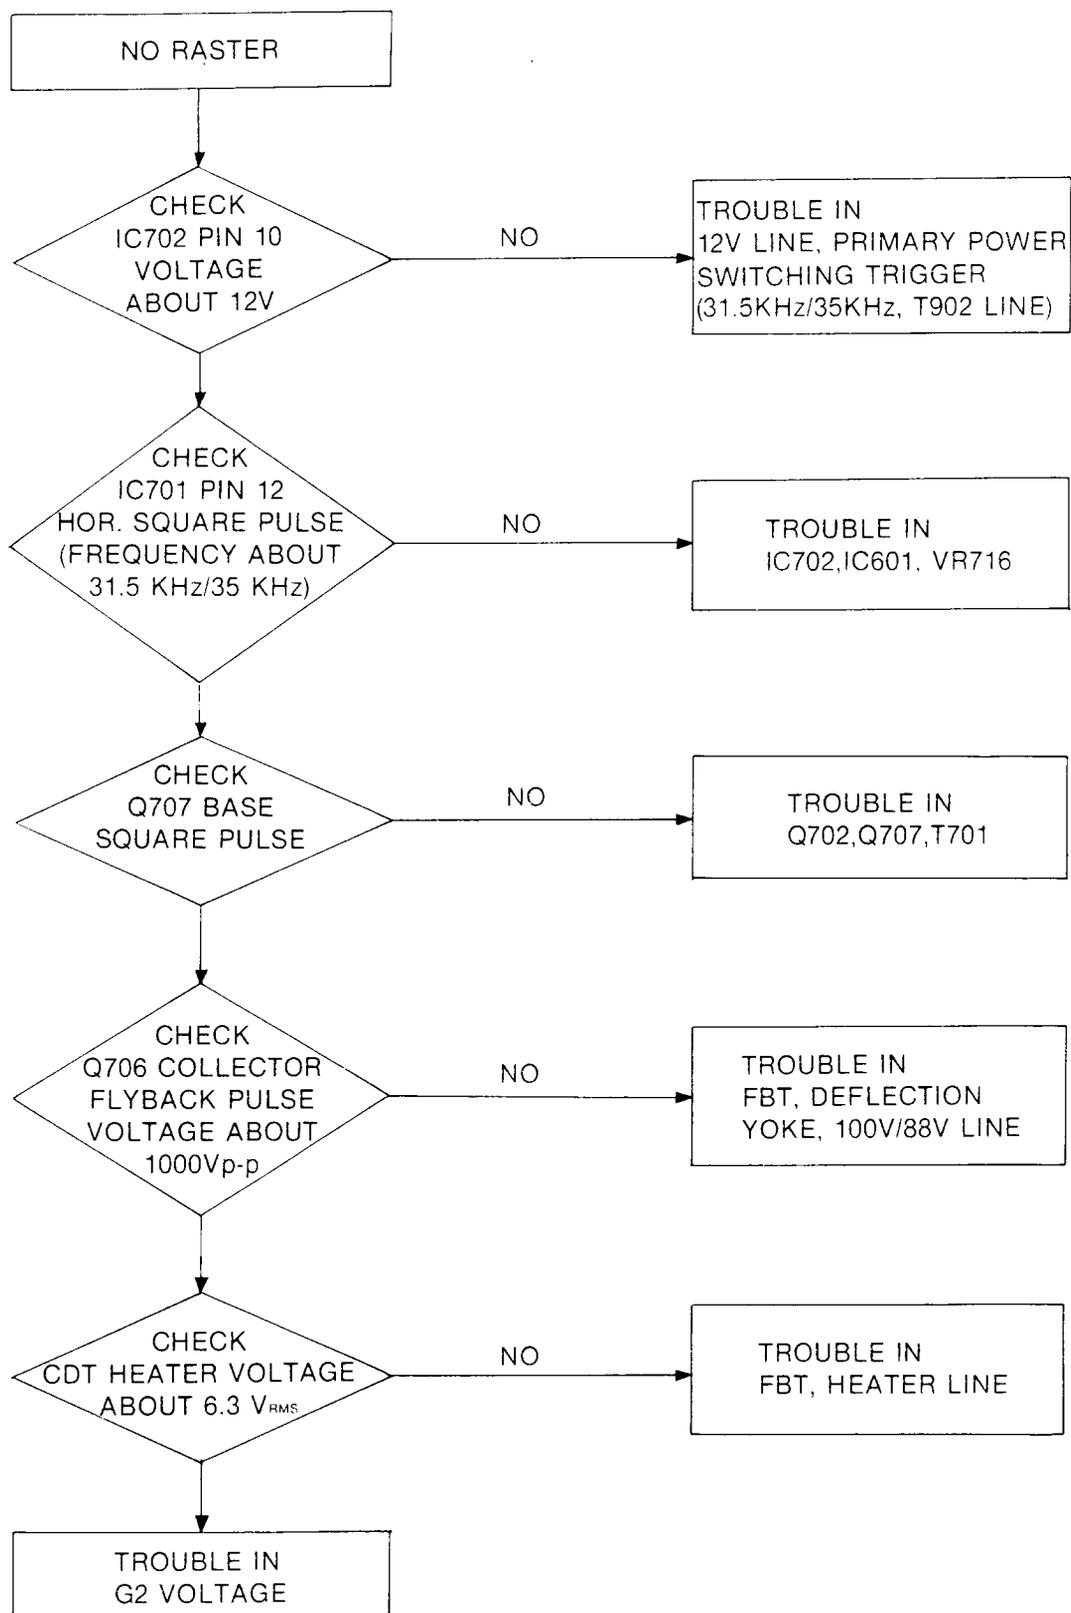

## NO POWER

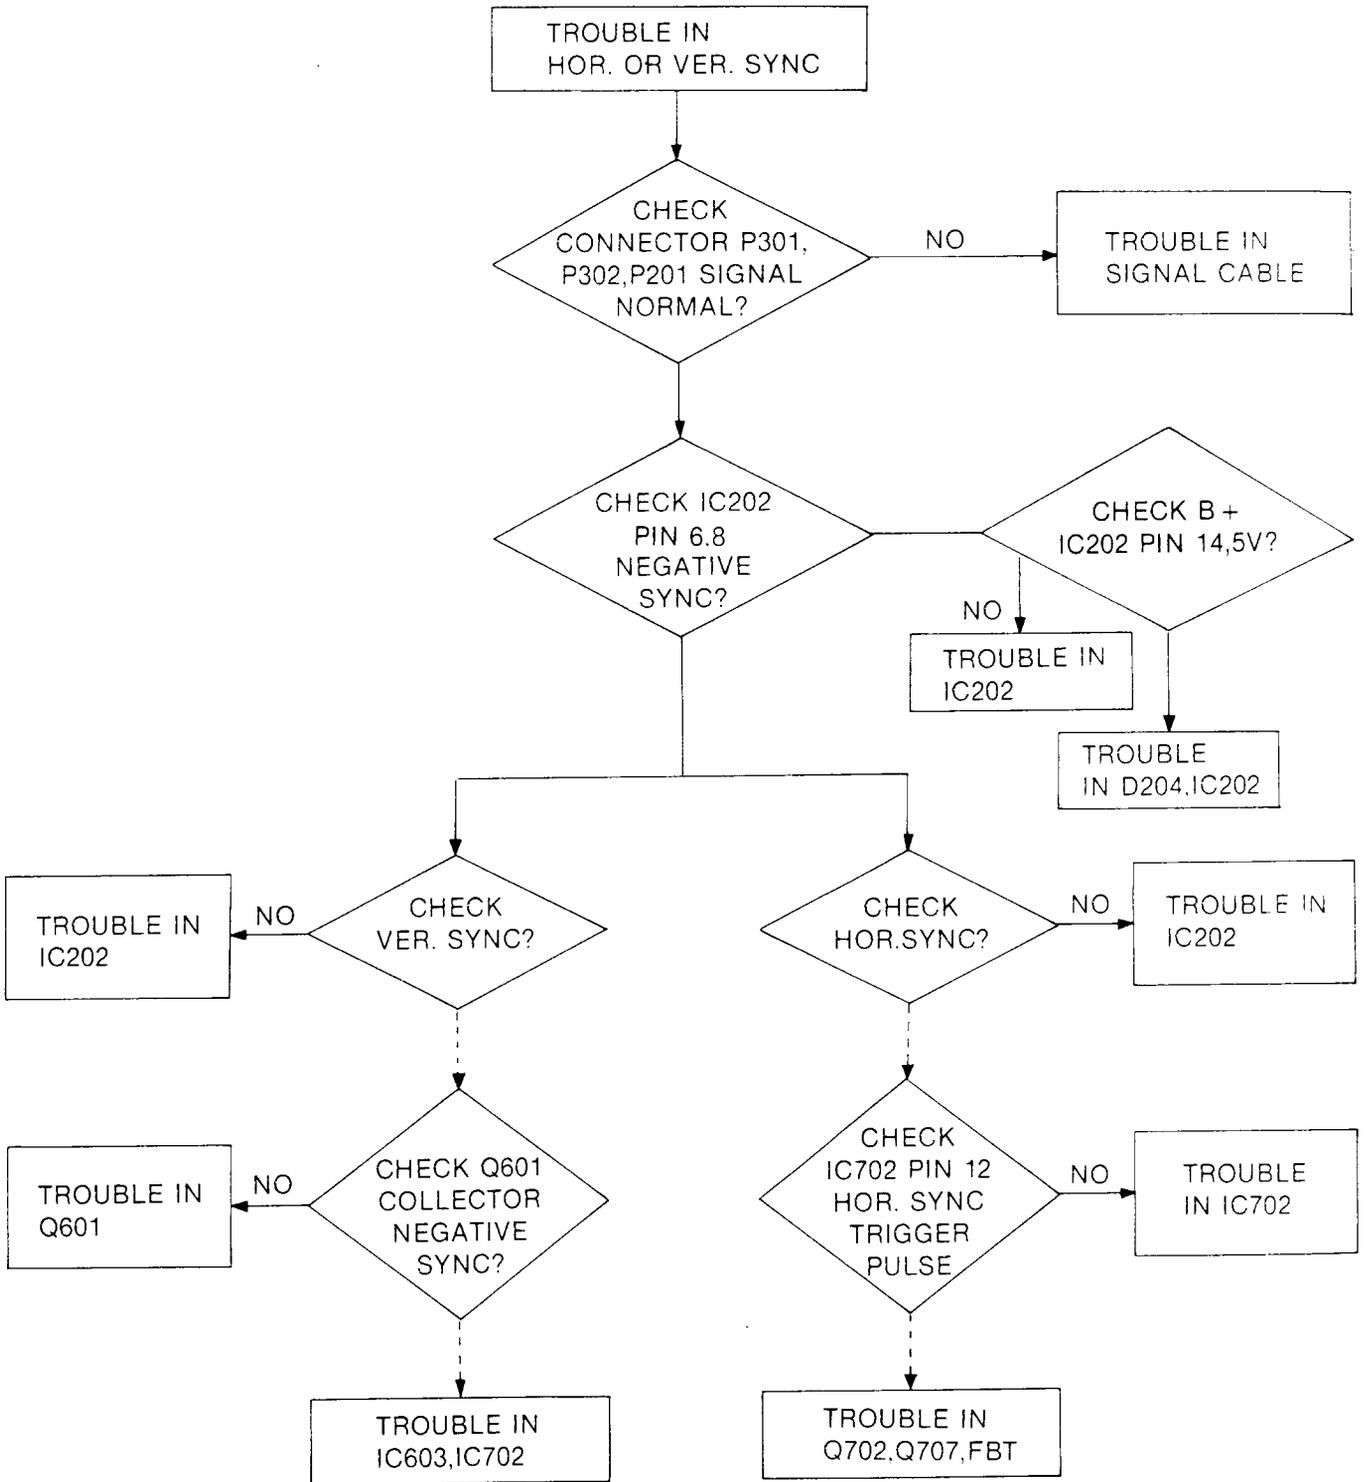

NO CHARACTER

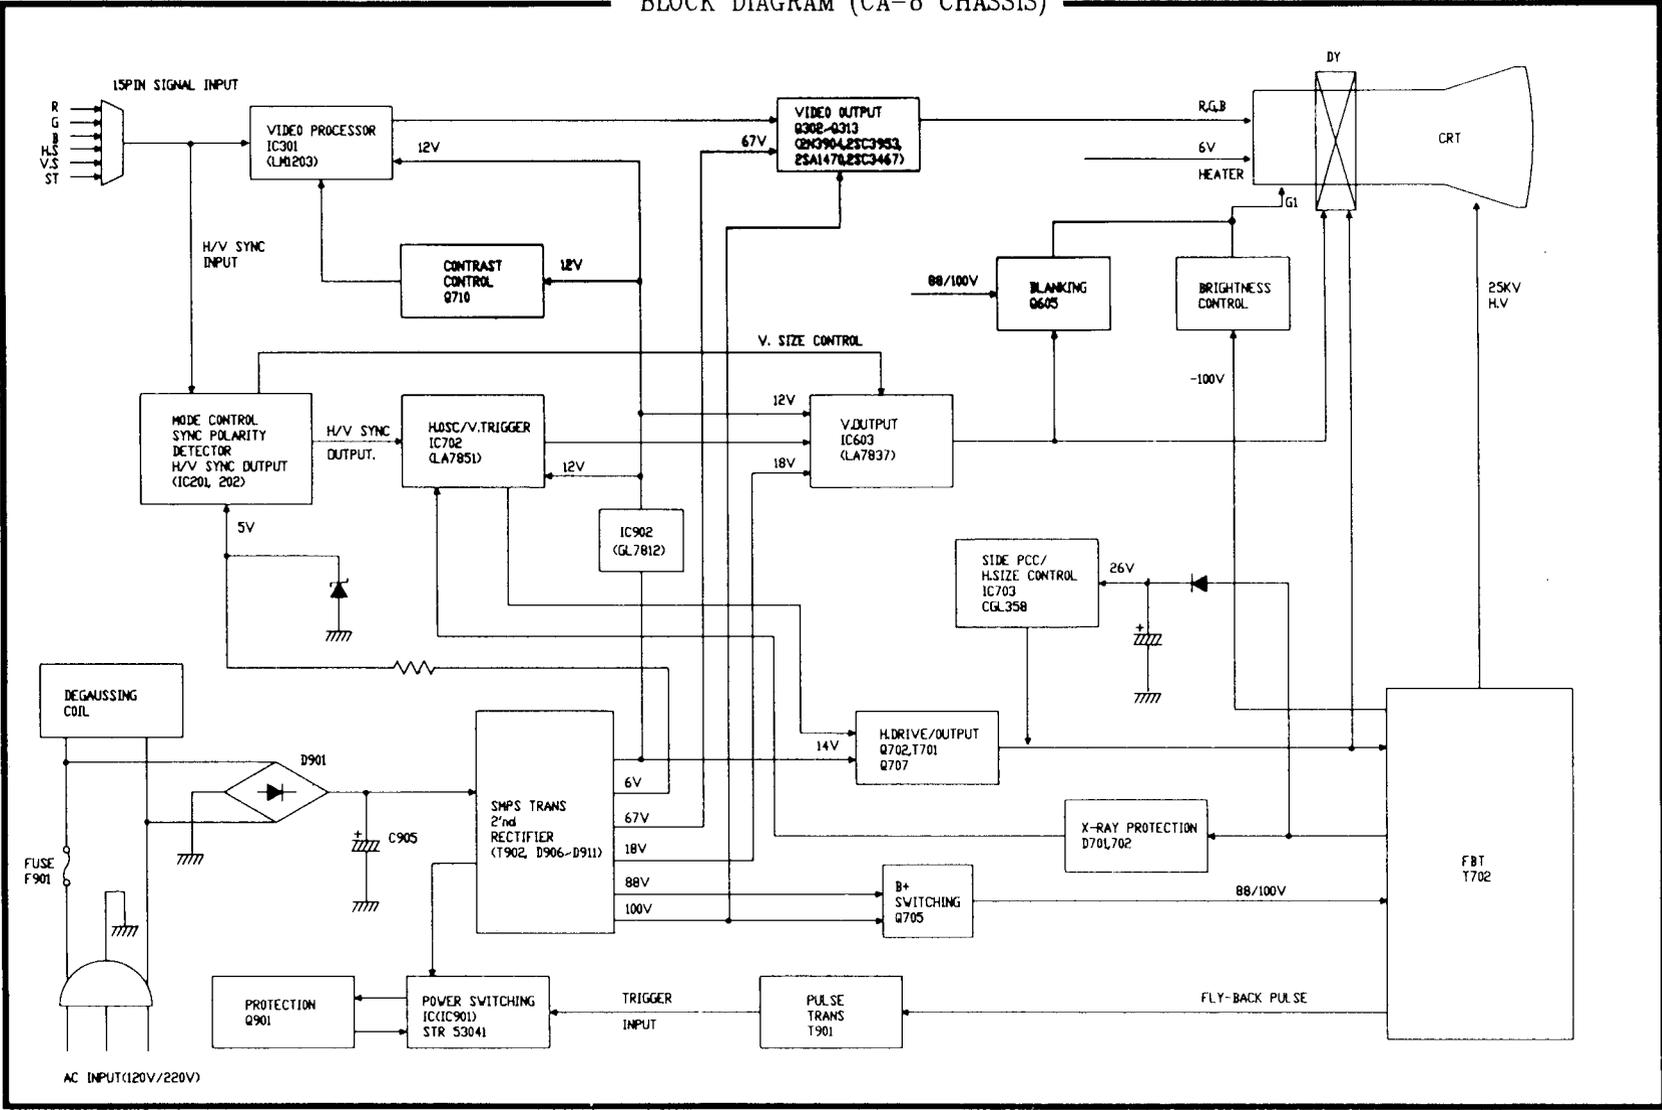

# NO RASTER

TROUBLE IN H,V SYNC

BLOCK DIAGRAM (CA-8 CHASSIS)

## DESCRIPTION OF BLOCK DIAGRAM

1. First of all if you push on the power switch, the voltage controlled by SWITCHING TR(IC901) in SMPS appears at the primary transformer.

2. Depending on the turns ratio of the transformer, the secondary voltages appear at the secondary and it is rectified by the RECTIFIER D906,907,908,909,910,911.

The SMPS output voltages are DC 67V/18V/14V/6V/100V/88V.

### 3. HORIZONTAL OPERATING PART.

The horizontal sync. input signal with 31.5 KHz/35.15 KHz/35.52 KHz TTL level is applied to horizontal OSC circuit in DEFLECTION IC (IC701 PIN#1) through GATE ARRAY (IC201, 202)

Then, this signal is driven by horizontal drive transistor (Q702) and horizontal output transistor (Q707), it drives FBT(T702) turning at 31.5 KHz/35.15 KHz/35.52 KHz.

Also it drives horizontal DEFLECTION YOKE.

### 4. VERTICAL OPERATING PART

The vertical sync. input signal with 56 Hz/60 Hz/70 Hz/87 Hz TTL level is applied to vertical OSC. part of drive IC(IC701 PIN#18).

Again, after the output signal from IC(IC701) applied vertical out IC(IC601), it drives vertical DEFLECTION YOKE.

### 5. VIDEO OPERATING PART

After R.G.B signals with 31.5 KHz/35.15 KHz/35.52 KHz frequency are applied by video processor IC(IC301), they are applied to video out transistor and they are applied to each R.G.B cathode of CDT.

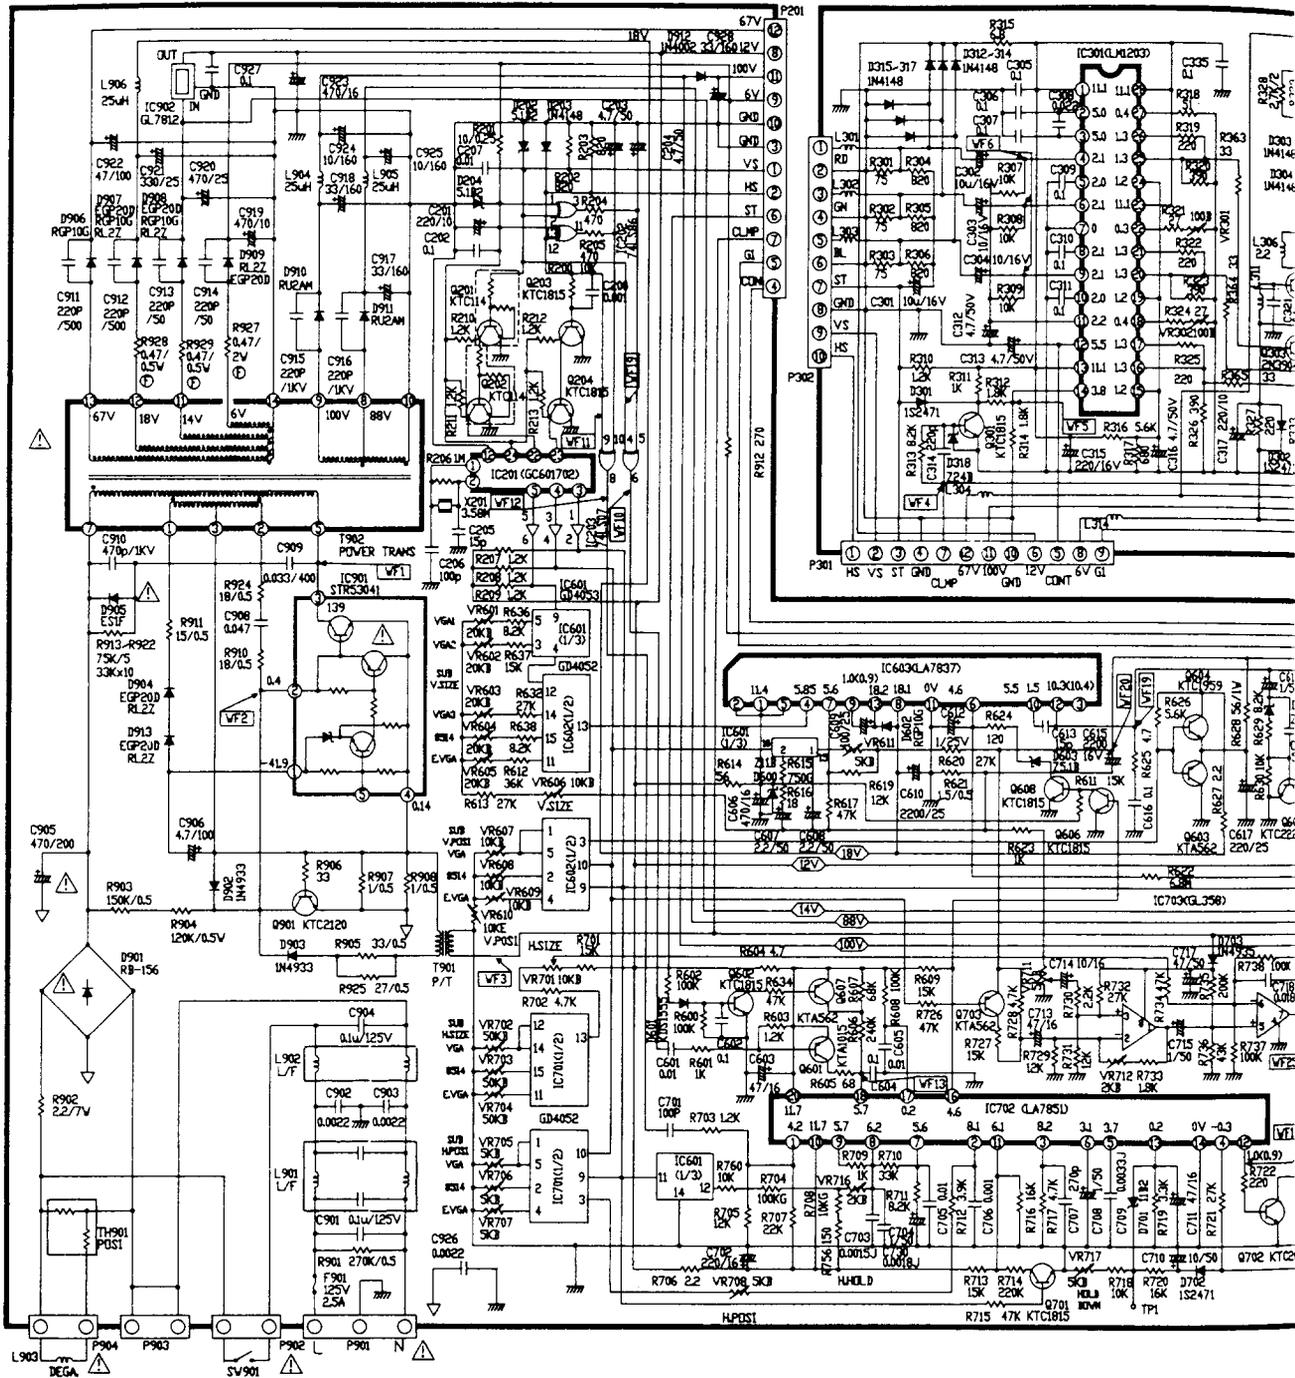

RED .....	Q302,303,304,305
GREEN .....	Q306,307,308,309
BLUE .....	Q310,311,312,313

### 6. X-RAY PROTECTION PART

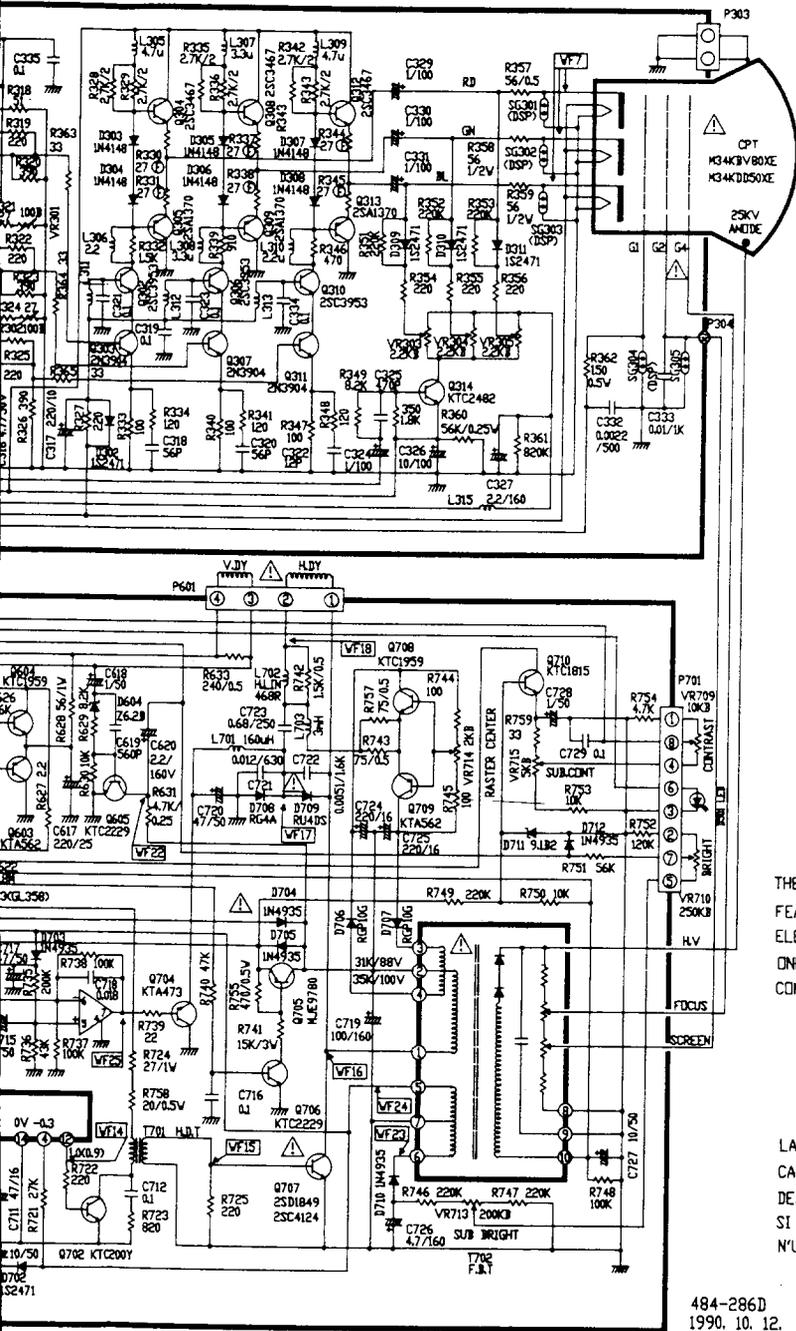

Output voltage from pin#5 of FBT(T702) is applied to diode D702.

The output voltage of zener diode(D701) is applied to X-RAY PROTECTION CIRCUIT, and this circuit controls horizontal OSC. circuit in DEFLECTION IC(IC701).

IMPORTANT SAFETY NOTICE

THE SYMBOL MARK OF THIS SCHEMATIC DIAGRAM INCORPORATES SPECIAL FEATURES IMPORTANT FOR PROTECTION FROM X-RADIATION, FIRE AND ELECTRICAL SHOCK HAZARDS, WHEN SERVICING IT IS ESSENTIAL THAT ONLY MANUFACTURER'S SPECIFIED PARTS BE USED FOR THE CRITICAL COMPONENTS IN THE SYMBOL MARK OF THE SCHEMATIC.

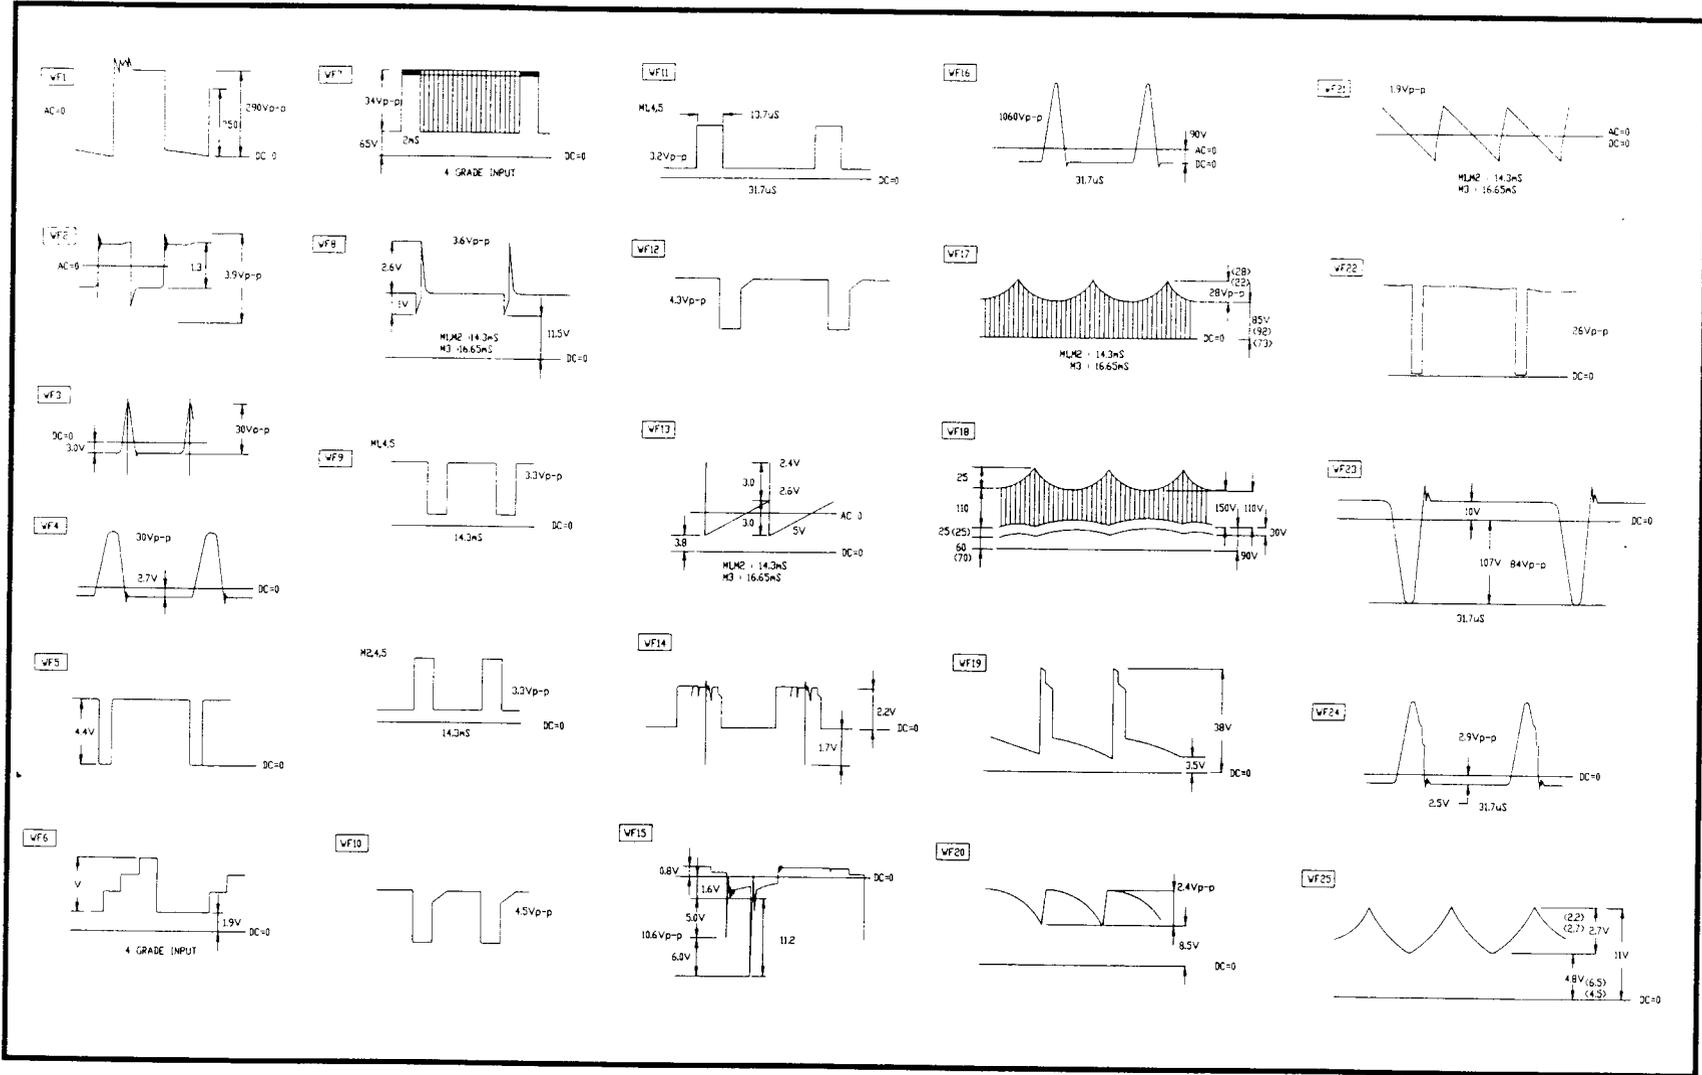

IMPORTANT AVIS SUR LA SÉCURITÉ

LA SYMBOLE MARQUE DE CE DIAGRAMME SCHEMATIQUE COMPREND DIMPORTANTES CARACTÉRISTIQUES SPÉCIALES CONCUES POUR PROTÉGER DES RAYONS X, ET DES DANGERS D'INCENDIE ET DE SECOURS ÉLECTRIQUES. EN CAS DE BESOIN SI DES PIÈCES DE CETTE SYMBOLE MARQUE DOIVENT ÊTRE REMPLACÉES N'UTILISEZ QUE DES PIÈCES SPÉCIFIÉES PAR LE MANUFACTURIER.

## REPLACEMENT PARTS LIST

**CAUTION:** Before replacing any these components, read carefully the "SAFETY PRECAUTION", on page 3.  
Do not degrade the safety of the receiver through improper servicing.

**ABBREVIATIONS:** Capacitors .... MPE: Metalized Polyester,  
 CC: Ceramic (TC), CE: Chemical, CK: Ceramic (Hi-K),  
 MPP: Metalized Polypropylens, BP: Bipolar, CQ: Mylar  
 PE: Polyester, PP: Polypropylene  
 Resistors .... RD: Carbon Film, RS: Metal Oxide Film,  
 RN: Metal Film, RV: Variable, RF: Fusing, SR: Semifix

(All CC and Plastic Capacitors are  $\pm 5\%$ , 50 Volts all resistor,  $\pm 5\%$ , 1/6W unless other wise noted).  
**S:** Recommend Service Parts, **R:** Replacement Service Parts.

# CLASSIFICATION OF VGA MONITOR

## COMPARISON OF PARTS LIST

If you try to repair your monitor, look on the ID label of the monitor, you must insert the correct part in accordance with LOW VERSION or HIGH VERSION MONITOR. 0.28 DOT CDT or 0.31 DOT CDT MONITOR. The replacement parts list are as follows:

### MAIN BOARD

#### 1. POWER PARTS

REF NO.	LOW VERSION		HIGH VERSION	
	PART NO.	DESCRIPTION	PART NO.	DESCRIPTION
	174-120N	POWER CORD (174-120P)	174-108A	POWER CORD
C901	181-278A	0.1uF/125V X-CAP	181-217C	0.47uF/250V X-CAP
C904	181-278A	0.1uF/125V X-CAP	181-217C	0.47uF/250V X-CAP
C905	181-124E	CE, 470uF/200V	181-124R	CE, 220uF/400V
C906	08110611	CE, 4.7uF/100V	02140615	CE, 22uF/100V
C909	181-060N	PP, 0.033uF/400V	181-061N	PP, 0.039uF/630V
C910	02201352	CK, 470pF/1KV	02201336	CK, 100pF/1KV
C929	NONE	NONE	08201052	CK, 470pF/500V
