SPECIFICATIONS

PICTURE TUBE

Size : 14 inch
 Gun : In-Line
 Deflection Angle: 90°
 Neck Diameter : 29.1 mm
 Phosphor : R, G, B

SIGNAL

Input Signal : R, G, B ANALOG
 H-Syn., V-Syn., TTL-Level
 Signal Connector: 15 Pin "D" Type

2-1 VIDEO INPUT

Amplitude : 0.69V
 Signal Polarity : Positive
 Rise & Fall Time : 8ns max.

2-2 VERTICAL

Amplitude (Level Low) : 0-0.4V
 Amplitude (Level High) : 2.4-5.25V
 Signal Polarity : Posi. or Nega.
 Vert. Frequency : 60/70 Hz

2-3 HORIZONTAL

Amplitude (Level Low) : 0-0.4V
 Amplitude (Level High) : 2.4-5.25V
 Signal Polarity : Posi. or Nega.
 Horiz. Frequency : 31.5 KHz

3. POWER SUPPLY

3-1 Power Rating : AC 98-132V
 : 60Hz, 0.9A/
 AC196-264V
 50Hz, 0.5A

4. DISPLAY AREA

4-1 Active Video Area : 247 mm × 180 mm
 [9.72" × 7.09"]
 4-2 Display Character : 25 Rows × 80
 Columns

5. EXTERNAL CONTROL

PUSH-ON, Brightness, Contrast, V-Size, H-
 Position, H-Size, V-Center.

6. ENVIRONMENT

6-1 Operating Temperature : 10°C~41°C
 6-2 Relative Humidity : 8 to 80%
 (noncondensing)
 6-3 Altitude : 10,000ft

7. DIMENSIONS

	W	D	H	With T/S
CV430	356mm	375mm	308mm	358mm
CV432	356mm	375mm	309mm	354mm
CV431	354mm	375mm	309mm	359mm

8. WEIGHT

	CV430	CV432	CV431

Gross	13.5 Kg	13.5 Kg	13.5 Kg

9. RESOLUTION (Max)

640 × 480

PREFACE

SAFETY PRECAUTIONS

SAFETY-RELATED COMPONENT WARNING!

There are special components used in GoldStar color monitor which are important for safety. These parts are marked (Δ) on the schematic diagram and on the replacement parts list. It is essential that these critical parts should be replaced with the manufacturer's specified parts to prevent X-RADIATION, shock, fire or other hazards. Do not modify the original design without obtaining written permission from GoldStar or this will void the original parts and labor guarantee.

CAUTION: No modification of any circuit should be attempted.

Service work should be performed only after you are thoroughly familiar with all of the following safety checks and servicing guidelines.

SAFETY CHECK

Care should be taken while servicing this color monitor because of the high voltage used in the deflection circuits. These voltages are exposed in such areas as the associated flyback and yoke circuits.

FIRE & SHOCK HAZARD

- An isolation transformer must be inserted between the color monitor and AC power line before servicing the chassis.
- In servicing, attention must be paid to the original lead dress especially in the high voltage circuit. If a short circuit is found, replace all parts which have been overheated as a result of the short circuit.
- All the protective devices must be reinstalled per original design.
- Soldering must be inspected for the cold solder joints, frayed leads, damaged insulation, solder splashes or the sharp points. Be sure to remove all foreign materials.

IMPLOSION PROTECTION

All used display tubes are equipped with an integral implosion protection system, but care should be taken to avoid damage and scratching during installation. Use only same type display tubes.

X-RADIATION

The only potential source of X-Radiation is the picture tube. However, when the high voltage circuitry is operating properly there is no possibility of an X-Radiation problem. The basic precaution which must be exercised is to keep the high voltage at the factory-recommended level: the nominal high voltage is 24KV and must not exceed 30KV at zero beam current at rated voltage. The following steps describe how to measure the high voltage and how to prevent X-radiation.

Note: It is important to use an accurate high voltage meter calibrated periodically.

- To measure the high voltage, use a high impedance high voltage meter, Connect (-) to chassis and (+) to the CRT anode button.
- Turn the brightness control fully clockwise.
- Measure the high Voltage. The high voltage meter should indicate at the factory-recommended level.
- If the upper meter indication exceeds the maximum level, immediate service is required to prevent the possibility of premature component failure.
- To prevent X-Radiation possibility, it is essential to use the specified picture tube.

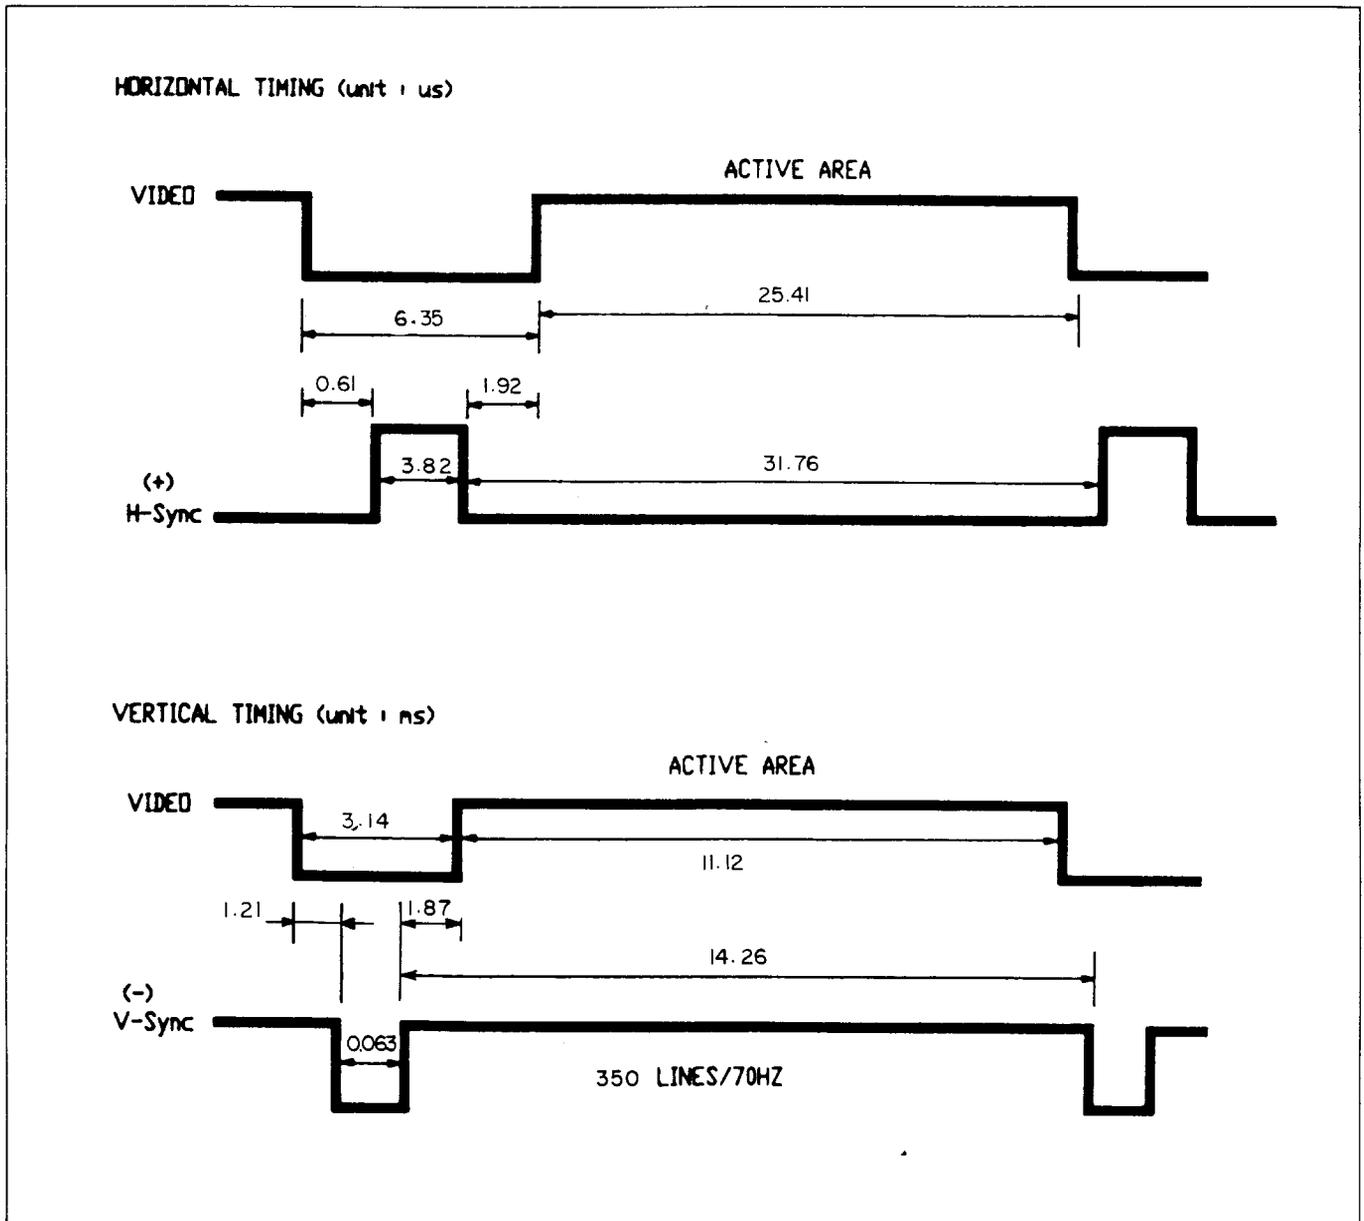

FEATURES

CV430(1430/1425 Plus), CV432, CV431 Color Monitor has the following features:

- R.G.B Analog signal
- 30 MHz Bandwidth.
The High-Resolution CPT (Color Picture Tube) displays 80-column lines without blurring the characters.
- Displays 2000 Characters in a 8 × 14/8 × 16 dot format.
- Has its own power control and indicator using the SMPS (Switching Mode Power Supply). The SMPS in your Color Monitor automatically switches to match the power (AC 98-132V; AC 196-264V for Europe/U.K./Australia models).
- Is compatible with IBM PS/2.

CONTROLS LOCATION

CV430(1430/1425 Plus), CV431, CV432 Color Monitor uses a 15-pin "D" type connector. The input signal is connected through the 15-pin connector.

The input signal is based on the TTL sync. and ANALOG Video. Figure 1 shows the monitor controls on the front and rear panels.

Front View (Optional)

Rear View (Optional)

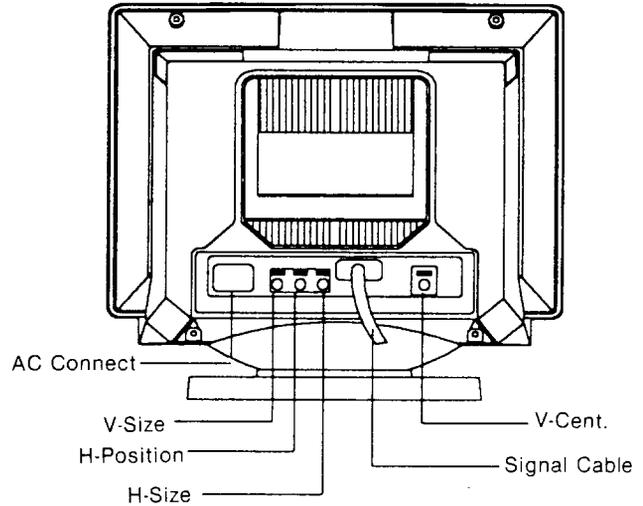

Figure 1, Monitor Controls

- **POWER (PUSH-ON)**

Push this button the POWER is ON. The Power indicator lights when the power is ON. Always turn on the monitor before turning on the computer. Push this button again the POWER is off.

- **CONTRAST (VR709)**

Adjust the display to the contrast preferred by the user.

- **BRIGHTNESS (VR710)**

Used to adjust the brightness of the screen.

- **V-SIZE (VR602)**

Turn this potentiometer to adjust the vertical size of the picture.

- **H-POSITION (VR702)**

Turn this potentiometer to adjust the Horizontal position of the picture.

- **H-SIZE (VR608)**

Turn this potentiometer to adjust the vertical size of the picture.

- **V-CENTER (VR607)**

Turn this potentiometer to adjust the vertical center of the picture.

CIRCUIT DESCRIPTION

POWER SUPPLY

The power supply is a SMPS (Switching Mode Power Supply) that consists of switching IC(IC901), SMPS transformer (T901) pulse transformer (T902), over current protection transistor (Q901) and the associated components. The primary winding of the SMPS transformer is applied the pulse by operating IC901. Therefore, rectified DC output voltage is obtained by the secondary winding of SMPS transformer T901.

POWER SUPPLY DESCRIPTIONS

This SMPS (Switching Mode Power Supply) using STR58041 obtains rectified DC 100V, 70V, 25V, 12V from AC120V, 60Hz (USA Version)/AC 220V, 50Hz (Europe version).

Power is supplied in the following procedure:

- 1) AC120V/AC220V supplied from the AC socket is rectified by D901.
- 2) Rectified voltage is supplied to the T901.
The primarily rectified voltage by D901 is supplied to PIN 6 of T901 through PIN 4 of T901.
- 3) A switching pulse is applied at PIN 2 of the IC901.
- 4) This oscillation causes IC901 to switched, and at the secondary terminal of T901, a voltage (proportional to the turn ratio) is generated.

HORIZONTAL AFC AND OSCILLATION LIMITER

The AFC circuit consists of phase detection circuit of IC701 and the associated components. The oscillation limit circuit is necessary to prevent the pulse from excessive high voltage. This circuit is located in IC701 and controls the oscillator to maintain the control signal in its correct frequency and in phase with the horizontal sync signal.

HORIZONTAL DRIVE CIRCUIT

To obtain horizontal drive pulses from IC701 PIN 12, the horizontal oscillator must be working.

Horizontal drive pulses from IC701 PIN 12 are applied to horizontal drive transformer and drive transistor Q701.

The B+ for T701 is supplied from the 12V line.

HORIZONTAL DEFLECTION OUTPUT

Horizontal drive pulses from IC701 PIN 12 are coupled through T701 to the base of horizontal output Q702. Transistor Q701 is biased on when the beam is at about mid-screen.

The charge stored in C721 causes current to flow through the horizontal yoke winding and Q702 to ground. When the beam reaches the right side of the screen, Q701 is turned off, and the current in the yoke is directed into C722 and C724.

At the same time current flows into C722 and C724 from the regulated B+ via the horizontal choke coil (L702) winding.

Due to resonance, the current then reverses and flows back through the horizontal yoke winding into C721 and C728.

X-RAY PROTECTION CIRCUIT

The X-RAY protection circuit consists of D701, R717, R721, R722, and the associated component that connected to PIN 13 of IC701. A voltage from the FBT PIN 6 is divided by R722 and R721. Under normal operating conditions, the resultant voltage (TP2) maintains the specified value.

If a malfunction causes excessive high voltage, the voltage of FBT PIN 6 is increasing and TP2 voltage is increasing. As a result, D701 is conducted when the cathode voltage of D701 is arrived as much as Zener voltage. A voltage increase at IC701 PIN 13 makes the X-RAY protection circuit conduct, and the horizontal oscillation operation no longer functional. The circuit latches as above, and it is necessary for the circuit to turn the power off for at least 30 seconds to function again.

VERTICAL OSCILLATION/DRIVE CIRCUIT

The time constant circuit that determines the vertical oscillation frequency consists of C715, R712 and R713. (IC701 PIN 16).

The vertical trigger input circuit (IC601 PIN 2) is driven by the vertical sync. negative polarity pulse from the IC701 PIN 16.

The drive circuit has a differential input stage driven by the sawtooth waveform generated at IC601 PIN 6. The negative feedback waveform at IC601 PIN 7 driven from the vertical deflection output is applied to the other input of the differential amplifier.

ADJUSTMENT

GENERAL INFORMATION

All adjustments are thoroughly checked and corrected when the monitor leaves the factory.

Therefore the monitor should operate normally and produce proper color and picture upon installation. However, several minor adjustments may be required depending on the particular location in which the monitor is to operate. This monitor is shipped completely in carton. Carefully draw out the monitor from the carton and remove all packing materials.

Check and adjust all the customer controls such as Brightness, and Contrast to obtain a normal picture.

HORIZONTAL HOLD ADJUSTMENT

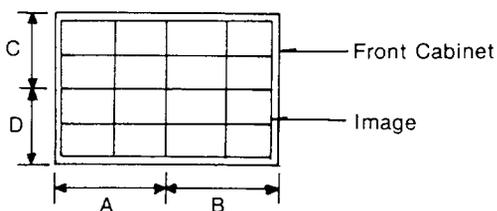

1. Display the Reverse Pattern on the monitor.
2. Disconnect H-Sync signal.
3. Turn the VR703 (H-Hold) for the screen to stand straight.

VERTICAL LINEARITY ADJUSTMENT

1. Display the Cross Hatch Pattern on the monitor.
2. Turn to the VR603, so that the vertical linearity should be best condition.

VERTICAL SIZE ADJUSTMENT

1. VERTICAL SIZE ADJUSTMENT
 - Display the MODE 3 Cross Hatch Pattern on the monitor.
 - Set the external V-Size VR(VR602) at center.
 - Adjust the VR602, and then the vertical size should be within 180 ± 2 mm.

(Fig. 1)

VERTICAL CENTER ADJUSTMENT

1. Display the Reverse Pattern on the monitor.
2. Adjust the VR607(External VR), and then set the geometric vertical center in the screen.

SIDE PINCUSHION ADJUSTMENT

1. Display the Reverse Pattern.
2. Adjust the VR605 so as to minimize the pincushion distortion.

HORIZONTAL SIZE ADJUSTMENT

1. Display the Cross Hatch Pattern on the monitor.
2. Set the external H-Size VR(VR608) at center.
3. Adjust the VR606 for the Horizontal Size so as to be within 247 ± 2 mm.
4. Then the Bright control should be set at the center, and the Contrast control should be set at the MAX.

WHITE-BALANCE ADJUSTMENT

1. THE USED INSTRUMENT
 - WHITE-BALANCE METER
 - DEGAUSSING COIL (Degauss the monitor before adjustment).
 - PHOTOMETER.
2. PREPARING ADJUSTMENT(1)
 - Connect the signal cable with PC, and display the Color 0.0 Full Pattern on the monitor.
 - Minimize the screen control of FBT.
 - Set the Sub-Bright (VR707) and the Sub-Contrast (VR708) to mechanical center.
 - Set the Contrast VR and the Bright VR to the Max.
 - Set the G and the B drive to mechanical center.
 - Minimize R,G,B Cut Off VR and turn clockwise B Cut Off VR (VR390) as much as $1/3$ (about 90°).

3. ADJUSTMENT (1)

- Turn the screen control (G2) to clockwise slowly until the brightness of B raster is 0.5~1 FL.
- Let the R Cut Off VR(VR390) be the reference, and adjust the G and the B Cut Off VR(VR350, VR370) so as to get $X = 0.282$, $Y = 0.304$.
- Adjust slowly counter-clockwise the screen VR for raster so as to disappear (Brightness VR Center; contrast VR Max).

4. ADJUSTMENT (2)

- 1) Set external Brightness VR to center and external Contrast VR to Maximum.
- 2) Display full white pattern (color 15.0) on the screen.
- 3) Turn the R drive VR(VR332) so that $X = 0.282$ and the G drive VR(VR352) so that $Y = 0.304$.
- 4) Repeat 3) until $X = 0.282 \pm 0.02$, $Y = 0.304 \pm 0.022$.
- 5) Set external Brightness VR to min. and adjust external Contrast VR until brightness is 5 FL at full white pattern (color 15.0).
- 6) Confirm $X = 0.282 \pm 0.02$, $Y = 0.304 \pm 0.022$ unless the color co-ordinate is not in spec, re-adjust R, G cut off VR (VR350, VR370) so that the pattern is white.
- 7) Repeat the number 3),4),5),6) so that the screen should be white.

BRIGHTNESS ADJUSTMENT

1. Set the external Bright VR at center and the external contrast VR at Min.
2. Display the Cut-Off Level (Color 0.0)
3. Adjust the Sub-Bright VR(VR707) until the back raster disappears.
4. Confirm that whether back raster appears or not when the Bright VR is at Max.

CONTRAST ADJUSTMENT

1. Set the external Bright VR at center and the external Contrast VR at Max.
2. Display White Pattern (Color 7.0), of which the size is 50×50 , on the monitor.
3. At the center of the screen, adjust the Sub-Contrast VR (VR708), so that the brightness should be 25 ± 4 FL.

FOCUS ADJUSTMENT

1. Set the Bright VR CENTER and the Contrast VR to Max.
2. Display the "H" character in full screen (Color 15.0)
3. Adjust Focus VR, so that the focus should be best condition.

FAIL SAFETY CHECK

USED INSTRUMENT: DC VOLTMETER.

1. Display the reverser pattern on the monitor.
2. Minimize the Contrast and the Bright VR. So that the screen should be Cut-Off.
3. Connect DC Voltmeter between TP₂ and chassis ground.
4. The voltage of TP₂ should be 10.2V-10.9V

CONFIRMING

1. Supply the cathode of D702 (TP2) with DC 12.0 +0.5/-0V, and then confirm that the monitor should be Hold Down.

(CAUTION): ALL PROCEDURE MUST BE DONE AFTER THE MONITOR IS FULLY HEAT-RUN.

Le Δ SYMBOLE MARQUE DE CE DIAGRAMME SCHEMATIQUE COMPREND D'IMPORTANTES CARACTÉRISTIQUES SPÉCIALES CONÇUES POUR PROTÉGER DES RAYONS X ET DES DANGERS D'INCENDIE ET DE SECOURS ÉLECTRIQUES. EN CAS DE BESOIN SI DES PIÈCES DE CETTE Δ SYMBOLE MARQUE DOIVENT ÊTRE REMPLACÉES UTILISEZ QUE DES PIÈCES SPÉCIFIÉES PAR LE MANUFACTURIER.

CA-9 SCHEMATIC DIAGRAM (14" LOW VERSION NEW)

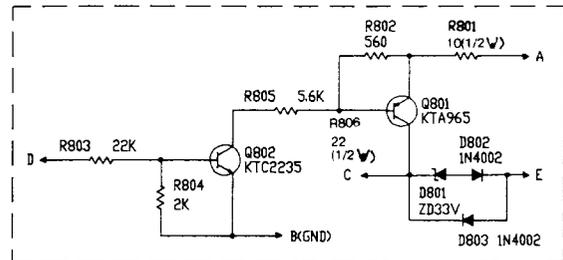

NOTES :

- ALL RESISTORS $1/8W \pm 5$ VALUES IN OHMS, G = $\pm 2\%$
K = 1,000ohm M = 1,000,000ohm
- ALL CAPACITORS IN μF , PF = $10 \times 10^{-12} F$
- USING M34JBK00X AND M34KDQ10XX CDT, THE RESISTANCE OF R633 MUST BE AS FOLLOWS:
R633: 300 ohm(1/2W)
- ACCORDING TO ALTERNATIVE USE LOCATED Q702, THE OTHER PARTS MUST BE CHANGED AS FOLLOWS:

Q702	2SD1886	2SD1849
R724,725 R726,727	47(1/2W)	47(1/2W)
R728	33(1/8W)	33(1/8W)
T701	151-269D	151-269D
D712	RU4DS	NONE

5. CONNECTED CIRCUIT AT A,B,C,D,E POINT.

IMPORTANT SAFETY NOTICE

THE \triangle SYMBOL MARK OF THIS SCHEMATIC DIAGRAM INCORPORATES SPECIAL FEATURES IMPORTANT FOR PROTECTION FROM X-RADIATION, FIRE AND ELECTRICAL SHOCK HAZARDS, WHEN SERVICING IT IS ESSENTIAL THAT ONLY MANUFACTURER'S SPECIFIED PARTS BE USED FOR THE CRITICAL COMPONENTS IN THE \triangle SYMBOL MARK OF THE SCHEMATIC.

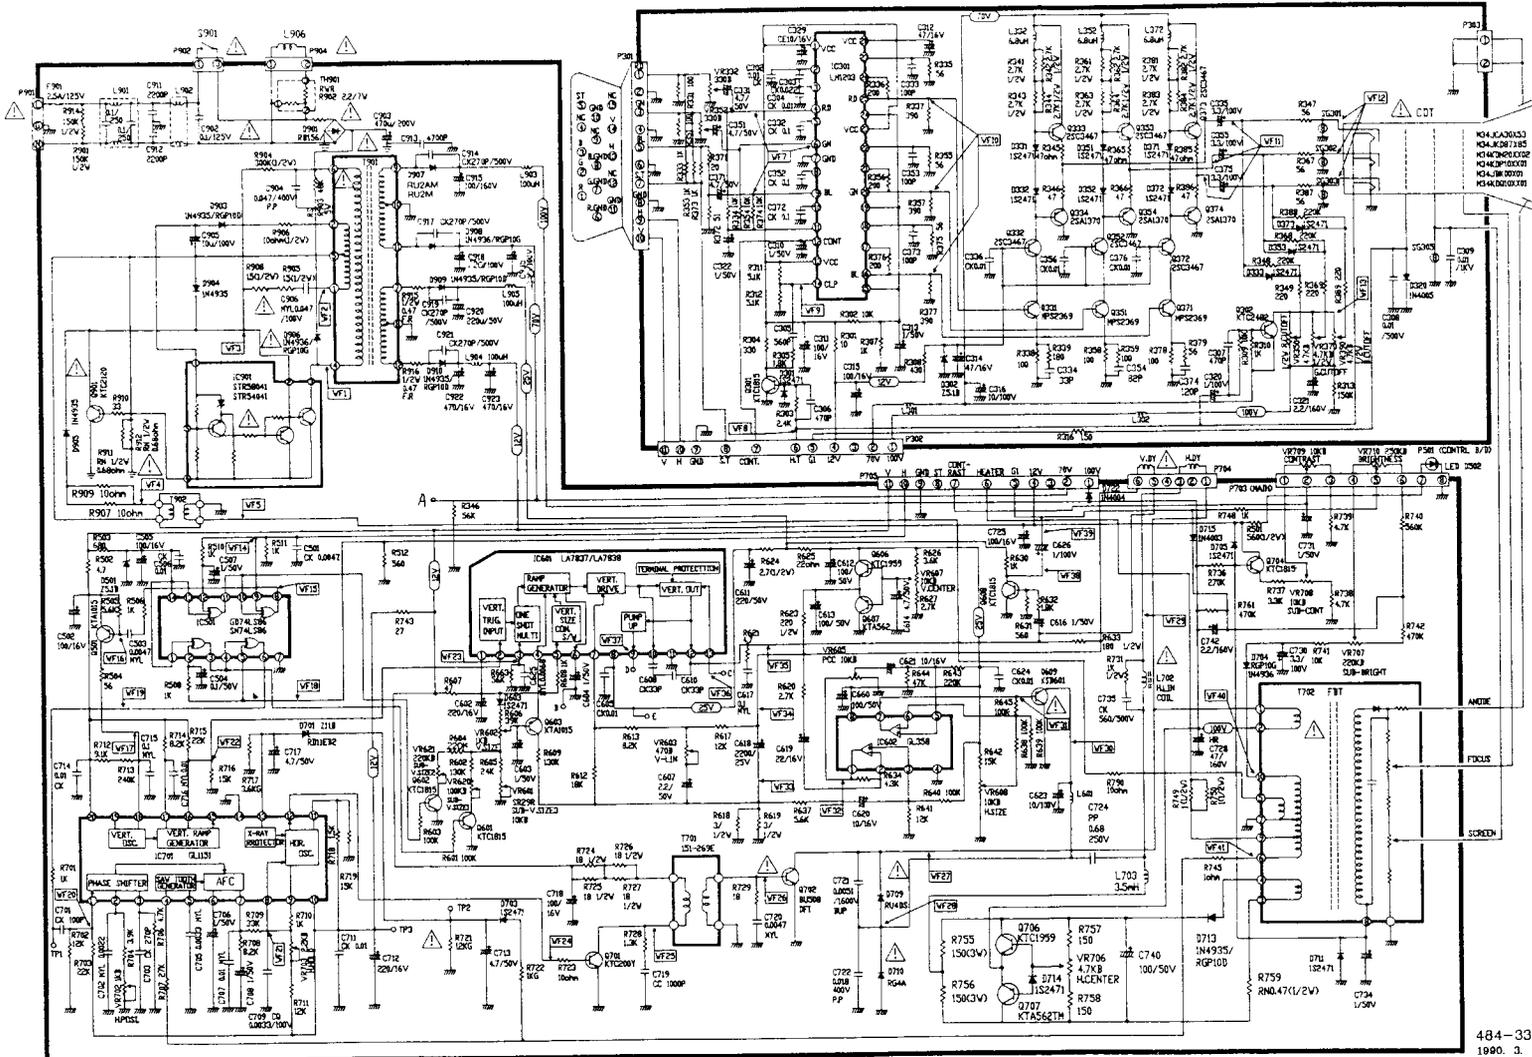

IMPORTANT AVIS SUR LA SÉCURITÉ

LA \triangle SYMBOLE MARQUE DE CE DIAGRAMME SCHEMATIQUE COMPEND D'IMPORTANTES CARACTÉRISTIQUES SPÉCIALES CONÇUES POUR PROTÉGER DES RAYONS X, ET DES DANGERS D'INCENDIE ET DE SECOURS ÉLECTRIQUES. EN CAS DE BESOIN SI DES PIÈCES DE CETTE \triangle SYMBOLE MARQUE DOIVENT ÊTRE REMPLACÉES N'UTILISEZ QUE DES PIÈCES SPÉCIFIÉES PAR LE MANUFACTURIER.

REPLACEMENT PARTS LIST

(LOW VERSION 0.31/0.39 DOT TUBE MONITOR)

CAUTION: Before replacing any these components, read carefully the "SAFETY PRECAUTIONS", on page 3.
Do not degrade the safety of the receiver through improper servicing.

ABBREVIATIONS: Capacitors CC: Ceramic (TC), CE: Chemical, CK: Ceramic (Hi-K),
MPP: Metalized Polypropylens, BP: Bipolar, CQ: Mylar
PE: Polyester, PP: Polypropylene
Resistors RD: Carbon Film, RS: Metal Oxide Film,
RN: Metal Film, RV: Variable, RF: Fusing

(S: Recommend Service Parts, R: Replacement Service Parts)

NOTE: ONLY $L_v = 15\text{mH}$ (0.39 DOT CDT, LOW VERSION).

PRODUCT SAFETY NOTE:

Components marked (△) have special characteristics important to safety. Before replacing any of these components, read carefully the PRODUCT SAFETY NOTICE of this service manual. Don't degrade the safety of the receiver through improper servicing.

CLASSIFICATION OF VGA MONITOR

COMPARISON OF PARTS LIST

If you try to repair your monitor, look on the ID label of the monitor, you must insert the correct part in accordance with LOW VERSION or HIGH VERSION MONITOR, 0.39 DOT CDT or 0.31 DOT CDT MONITOR. The replacement parts list are as follows;

MAIN BOARD

1. POWER PARTS

REF. NO.	LOW VERSION (120V)		HIGH VERSION (220V)	
	PART NO.	DESCRIPTIONS	PART NO.	DESCRIPTIONS
F901	131-036D	FUSE, 125V 2.5A	131-036E	FUSE, 250V 2A
TH901	163-016A	PTH451CD613G	06200270	PTH451C40BG
D906	06200481	1N4936	06200270	RGP 10M
