Baugruppen außerhalb des Chassis / Sub-assemblies outside the chassis / Groupes en dehors du châssis / Moduli al di fuori dello chassis

Schaltnetzteil-Minuspotential / Switch-mode power supply minus potential / Rapport au potentiel négatif du bloc-d'alimentation à découpage / Collegamento della sezione di rete a potenziale negativo

Messungen auf ⊥ (Masse) bezogen / Measurements referenced to earth (⊥) / Toutes les mesures se rapportent à la masse / Riferire tutte le misure alla massa

Messungen auf Schaltnetzteil-Minuspotential bezogen / Measurements referenced to switch-mode power supply minus potential / Toutes les mesures se rapportent au potentiel négatif du bloc secteur de commutation / Riferire tutte le misure al potenziale negativo della sezione di rete

Oszillogramm-Meßpunkt auf ⊥ (Masse) bezogen / Waveforms referenced to earth (⊥) / Tous les oscillosogrammes se rapportent à la masse / Riferire tutti gli oscillogrammi alla massa

Oszillogramm-Meßpunkt auf Schaltnetzteil-Minuspotential bezogen / Waveforms referenced to switch-mode power supply minus potential / Tous les oscillosogrammes se rapportent au potentiel négatif du bloc secteur de commutation / Riferire tutti gli oscillogrammi al potenziale negativo della sezione di rete

Testpunkt. Im Text wird für die Testpunkte die Abkürzung "TP ..." verwendet / Test point. The abbreviation "TP ..." is used for the test points in the text / Point test. Dans le texte, les points test sont désignés par l'abréviation «TP» / Punto di controllo. Nel testo i punti di controllo vengono determinati per mezzo di un «TP ...»

Sicherheitsbauteil im Sinn der Sicherheitsbestimmung. Diese Teile dürfen nur durch Originalteile ersetzt werden. Safety components in accordance with existing regulations. These components must only be replaced by original component parts. Composant de sécurité en accordance avec les régulations existantes. Ces composants doivent être remplacés par des composants originaux. Componente omologato in base alle norme di sicurezza. Questi pezzi devono essere sostituiti soltanto con pezzi originali.

R Chip-Widerstand / Resistor /  
100 Resistance-chip / Resistenza

C Chip-Kondensator / Capacitor /  
100 Condensateur-chip / Condensatore

L Chip-Spule/Drossel / Coil/Choke /  
100 Bobine/self-chip / Bobina

Br Chip-Brücke / Jumper /  
100 Shunt-chip / Ponte

## Achtung

Bei Reparaturen unbedingt Trenntrafo benutzen und gültige Sicherheitsvorschriften beachten.

Die Netzschaltung befindet sich auf dem Bedienteil.

## Röntgenverordnung

Die in der Röntgenverordnung festgelegte Ortsdosisleistung ist bei diesem Gerät durch die Bildröhrentypen und die maximal zulässige Hochspannung gewährleistet.

Die Hochspannung darf maximal 25 kV betragen.

Die Hochspannung liegt im zulässigen Bereich, wenn die Betriebsspannung der Horizontal-Endstufe bei minimalem Strahlstrom 145 V beträgt.

Bei Reparaturen ist die Spannung zu überprüfen und gegebenenfalls mit R 612 auf Solwert einzustellen.

## Attention!

Always use an isolating transformer for repair works and adhere to existing safety regulations.

The power supply fuse is located on the operating unit.

## X-ray regulations

The picture tube type and the maximum permissible high-voltage ensure that the X-ray intensity within the set remains far below the permissible value.

The high-voltage must not exceed 25 kV.

The high-voltage is within the permissible limits when, at minimum beam current, the operating voltage of the horizontal deflection stage is 145 V.

Following servicing, check and adjust this voltage to the nominal value with the R 612 (power supply section, if applicable).

## Attention!

Lors d'une réparation il faut utiliser un transformateur de séparation et respecter les mesures de sécurité.

Le fusible secteur se trouve sur le unité de commande.

## Reglementation du Rayon X

Le dosage local du règlement du Rayon X est fixé par le tube cathodique équipé dans ce châssis et assuré par la valeur admissible de la haute tension maximale.

La haute tension doit avoir une valeur absolue de 25 kV.

La haute tension doit s'élever dans la marge admissible, lorsque l'alimentation de l'étage sortie de lignes pendant que le courant de faisceau minimum atteint 145 V.

Lors de réparation, vérifier la tension et la ajuster au moyen du potentiomètre sur la valeur nominale (R 612).

## Attenzione!

In caso di riparazioni rispettare assolutamente le misure di sicurezza:  
Il fusibile di rete si trova sulla elemento di comando.

## Regolamento raggi X

La potenza prevista dalla disciplina raggi X per questo genere di apparecchio viene garantita dal tipo di cinescopio e dalla tensione massima consentita.

La tensione massima deve comportare 25 kV max.

La tensione massima si trova nei limiti consentiti se la tensione di esercizio della fase terminale-orizzontale comporta a corrente minima catodica 145 V.

Controllare, in caso di riparazione, la tensione, e, all'occorrenza, mettere a punto, a valore nominale, mediante R 612.

Schutzmaßnahmen für MOS-Bauelemente beachten!

Pay attention to protective measures for MOS components!

Respecter les mesures de protections pour les composants de MOS!

Osservare le misure protettive per gli elementi costruttivi MOS!

## PAL-Decoder

6911 30 26

### Achtung!

Bei Austausch oder Reparatur des Farbdecoders ist vor dem Einschalten des Gerätes unbedingt darauf zu achten, daß die zusätzliche Masseverbindung der Bildröhrenanschlußplatte hergestellt ist.

### Important:

Following exchange or repair of the colour decoder, ensure that the additional earth connection c.r.t. board has been re-established before switching on the set.

### Attention!

Avant le démarrage de l'appareil, en cas de remplacement ou réparation d'un décodeur, il faut contrôler que la masse supplémentaire de la platine du tube cathodique soit bien présente.

### Attenzione!

In caso di sostituzione o riparazione del decodificatore di colore bisogna assolutamente fare attenzione, prima di accendere l'apparecchio, che sia garantito il collegamento a massa chassis - circuito stampato di collegamento di cinescopio.

Reparaturtips

1. Das Netzteil ist mit abgetrennter Schaltstufe T 701 (Basis offen) schwingfähig.  
Da in diesem Zustand keine Ausgangsspannungen erzeugt werden, ist das IC 601 ohne Versorgungsspannung und somit außer Betrieb, d.h. das Netzteil wird nicht synchronisiert.  
An Pin 14 (IC 701) sind Rechteckimpulse mit ca. 14,6 KHz meßbar.  
Allerdings arbeitet das IC im sogenannten Interruptbetrieb, d.h. die Impulsspannung an Pin 14 wird für ca. 20 ms unterbrochen.  
**Achtung:** Bei abgetrennter Schaltstufe vor dem Wiederanklemmen (löten) den Elko C 658 entladen.
  2. Mit abgetrennter Horizontalentlaststufe (z.B. Anschluß 4 Tr. 501 offen) und einer Ersatzbelastung an der Kathode von D 733 (60 W-Lampe) liefert das Netzteil ca. 110 V (Compact B) ca. 80 V (Monoprint B)!
  3. Kommt es immer wieder zu Ausfällen des T 701 (ON 4046), so sind folgende Bauteile zu wechseln: IC 701, D 703 bis D 705, auch wenn lt. Ommeter in Ordnung, C 704.

## Repair tips

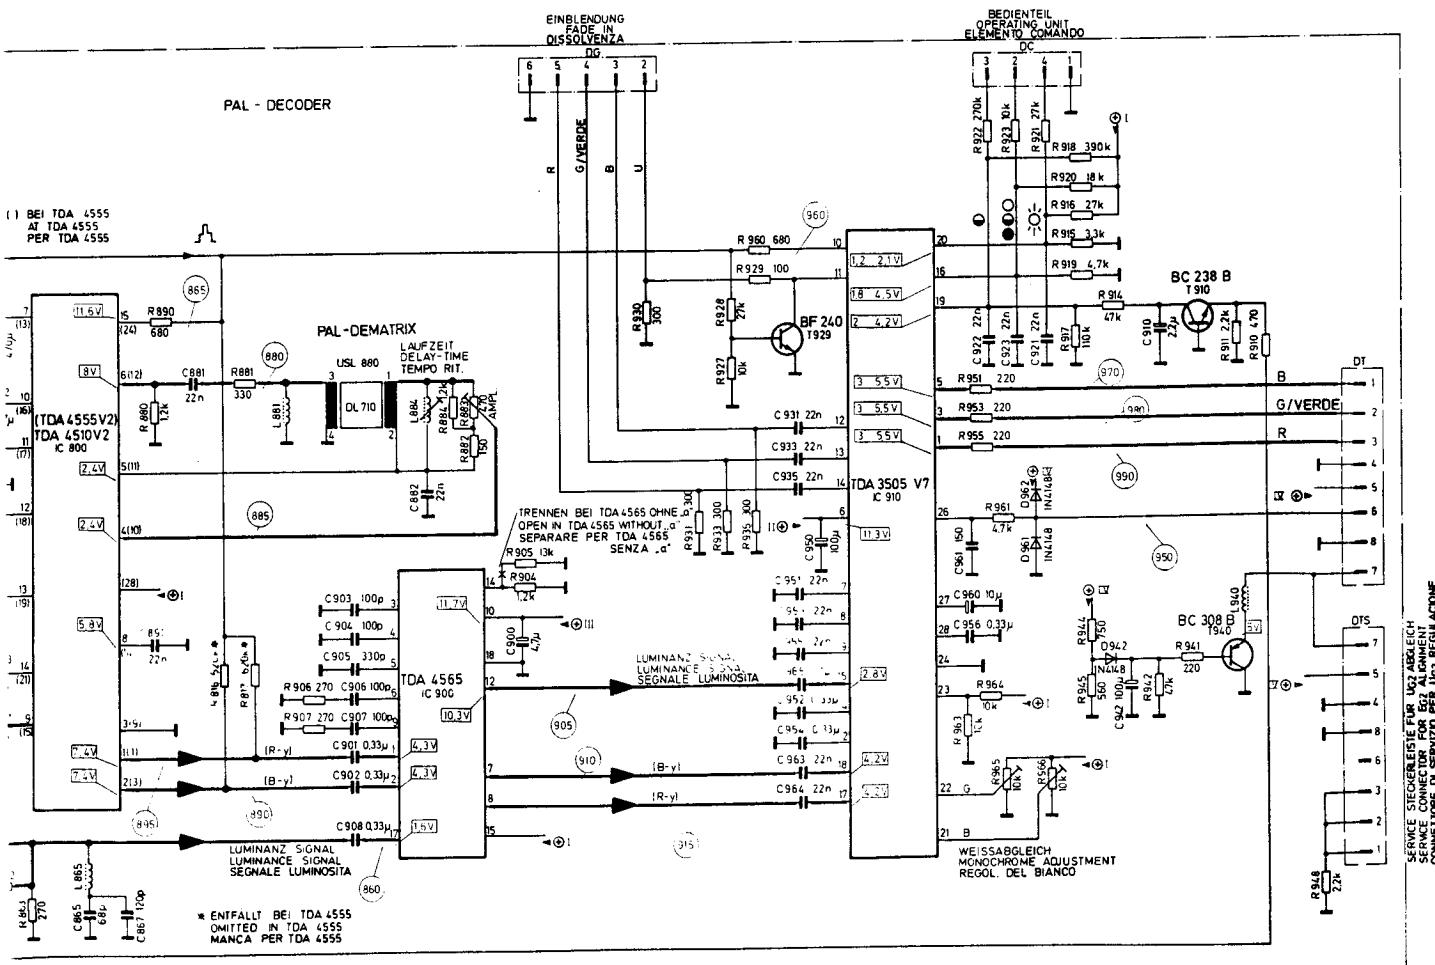

1. With disconnected switching stage T 701 (base open), the power supply is capable of oscillation. As no output voltages are generated in this condition, the IC 801 is without supply voltage and thus inoperative; in other words, the power supply is not synchronised. Rectangular pulses with approx. 14.6 kHz are measurable at Pin 14 (IC 701). However, the IC operates in so-called interrupt mode; i.e. the pulse voltage at Pin 14 is interrupted for approx. 200 ms.  
**N. B.** If the switching stage is disconnected, the electrolytic capacitor C 658 must be discharged prior to re-connection (soldering).
  2. With disconnected horizontal output stage (e.g. terminal 4 Tr. 501 open) and a replacement load at the cathode of D 733 (60 watt lamp), the power supply delivers approx. 110 V (Compact B). ca. 80 V (Monoprint B).
  3. If the T 701 (ON 4046) fails repeatedly, the following components should be replaced: IC 701, D 703 to D 705, even if these are OK according to the ohmmeter, and C 704.

#### **Consignes de réparation**

1. Le bloc secteur peut osciller lorsque l'étage de commutation (T 701) est déconnecté (base ouverte).  
Etant donné qu'aucune tension de sortie ne peut être générée dans cet état, le circuit IC 601 est dépourvu d'alimentation et donc hors service, c. à-d. que le bloc secteur n'est pas synchronisé.  
Des impulsions carrées de 14,6 KHz env. peuvent être mesurées sur le pin 14 (IC 701).  
Cependant, l'IC fonctionne en mode d'interruption, ce qui signifie que la tension impulsionnelle sur pin 14 est interrompue pendant 200 ms environ.  
**Attention:** Lorsque l'étage de commutation n'est pas connecté, le condensateur électrolytique C 658 doit être déchargé avant la connexion aux bornes (soudage).
  2. Lorsque l'étage final horizontal est déconnecté (p.ex. raccordement 4 Tr. 501 ouvert) et qu'une sollicitation de remplacement est présente à la cathode de D 733 (lampe de 60 W), le bloc secteur fournit 100 V env. (Compact B), ca. 80 V (Monoprint B).
  3. Lorsque des défaillances réitérées du T 701 (ON 4046) se manifestent, les composants suivants doivent être remplacés: IC 701, D 703 à D 705 et, même lorsqu'il est intact suivant l'ohmmètre, C 704.

## **Consigli per riparazioni**

- Questo elemento di alimentazione può oscillare grazie al grado di commutazione separato T 701 (base aperta). Siccome in questo stato non possono essere generate tensioni di uscita, l'IC 601 è privo di tensione di alimentazione e quindi non è in funzione, ciò significa che l'elemento di alimentazione non è sincronizzato. Al Pin 14 (IC 701) si possono misurare impulsi rettangolari con circa 14,6 KHz. L'IC funziona però nel cosiddetto funzionamento interrotto, cioè la tensione degli impulsi al Pin 14 viene interrotta per circa 200 ms.  
**Attenzione:** in caso di grado di commutazione separato, scaricare il condensatore elettrolitico C 658 prima della saldatura.
  - Con un grado finale orizzontale separato (p.es. collegamento 4 Tr. 501 aperto) e un carico di emergenza al catodo di D 733 (lampada da 60 W), l'elemento di alimentazione fornisce circa 100 V (compact B). ca. 80 V (Monoprint B).
  - In caso il T 701 (ON 4046) si guasti più volte, sostituire i seguenti componenti: IC 701, D 703 sino a D 705, anche

## C.R.T. base board

6911 39 39

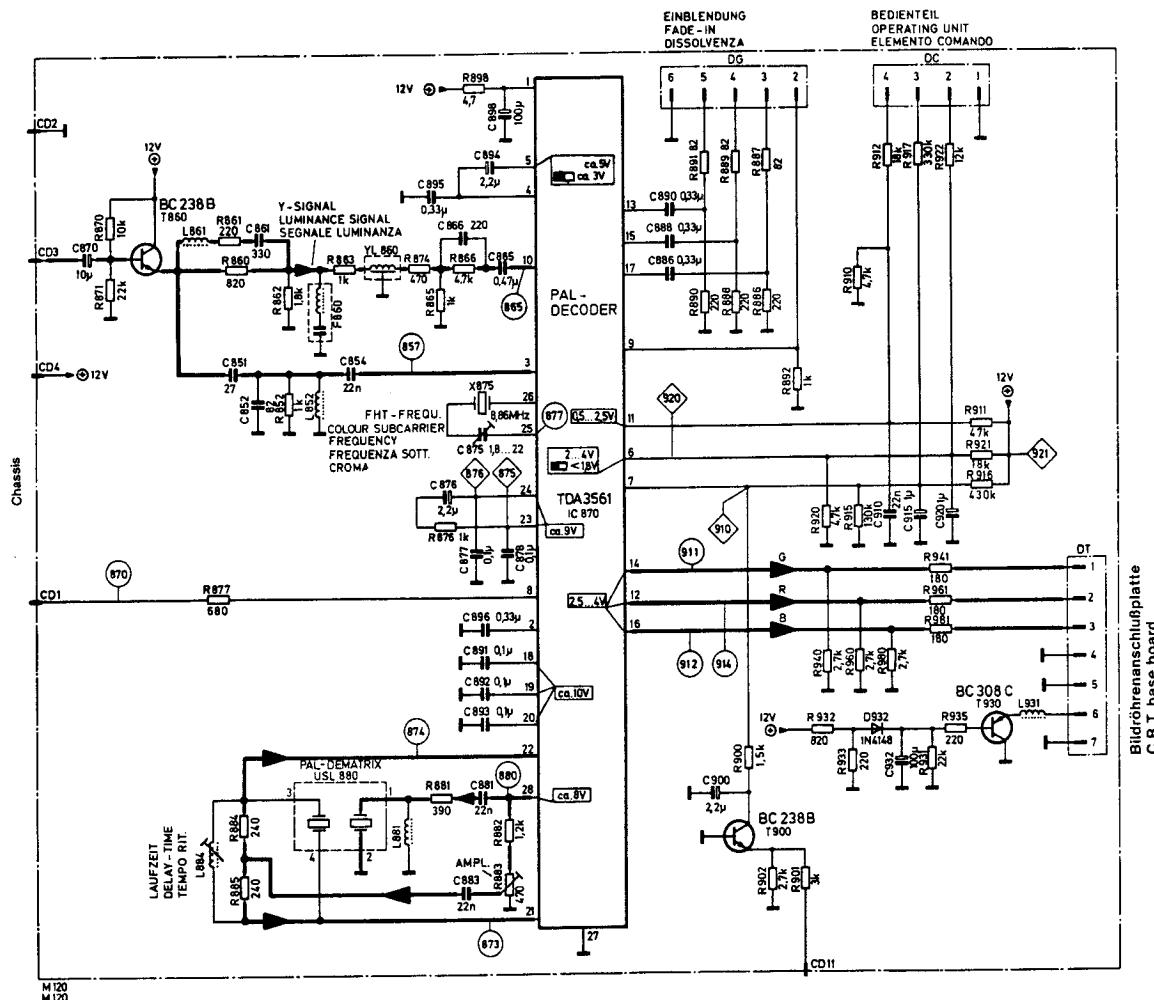

Decoder alignment 6911 30 31/33		
	Check the operating voltage to be $12\text{ V} \pm 0.6\text{ V}$ .	
1.	Sub-carrier oscillator	Signal: optional PAL. Galvanically connect TP 920 to TP 921 (+ 12 V) and TP 875 to TP 876 with R 874 (Decoder 6911 30 31) C 875 (Decoder 6911 30 33) of stationary colours on screen. Terminate the connections again after alignment.
2.	PAL dematrix	<b>Note:</b> Before performing this alignment it is necessary to first the sub-carrier oscillator and chroma trap. Signal: PAL test picture (e.g. FuBK or Philips universal test picture). Adjust L 884 for minimum Hanover bars in the "G-Y = O" area. Adjust R 883 for minimum Hanover bars in the "+V" and "+U" areas of the test picture. Repeat these adjustments alternately. With PAL SECAM decoder: SECAM colour pattern. Adjust R 883 for minimum Hanover bars.
<b>Black level (halftone) adjustment</b> <b>Monochrome adjustment Decoder 6911 30 31</b>	All black level controls (c.r.t. base) to maximum (earthsider stop). All drive controls (c.r.t. base) to maximum amplification. Connect TP 401/402/403 and adjust $5.0\text{ V} \pm 0.2\text{ V}$ on Pin DC 4. Colour saturation to minimum. Adjust E <sub>g2</sub> (U <sub>g2</sub> ) with R 1004 to where a line is barely visible on the screen. Open the black level controls slowly until lines are of equal brightness. At least of the black level controls should remain at its earthsider stop. Remove the links between. Adjust the drive controls so that the picture shows no colour tint.	
<b>Black level (halftone) adjustment</b> <b>Monochrome adjustment Decoder 6911 30 33</b>	All black level controls (c.r.t. base) to maximum (earthsider stop). All drive controls (c.r.t. base) to maximum amplification. Connect TP 910 (decoder) to earth. Adjust brightness control for $6.8\text{ V}$ on DC 4. Connect TP 401/402 by means of wire links. All black level controls to maximum (earthsider stop). Adjust E <sub>g2</sub> (U <sub>g2</sub> ) with R 506 to where a line is barely visible on the screen. Open black level controls slowly until lines are of equal brightness. At least one black level control should remain at its earthsider stop. Remove the links between. Adjust the drive controls so that the picture shows no colour tint.

## Hinweis zum Antennenanschluß

Aufgrund der heute vermehrten unmittelbaren Geräteumfeld einwirkenden Störstrahlungen, sollten mit Rücksicht auf eine optimale Störunterdrückung ausschließlich abgeschirmte Antennenanzügelungen (75 Ohm) und Antennenstecker (DIN 45325) verwendet werden. Ungeschirmte Antennenkabel, Symmetrierglieder und Antennenstecker reichen für einen ungestörten Empfang häufig nicht mehr aus.

## Hint for antenna connecting

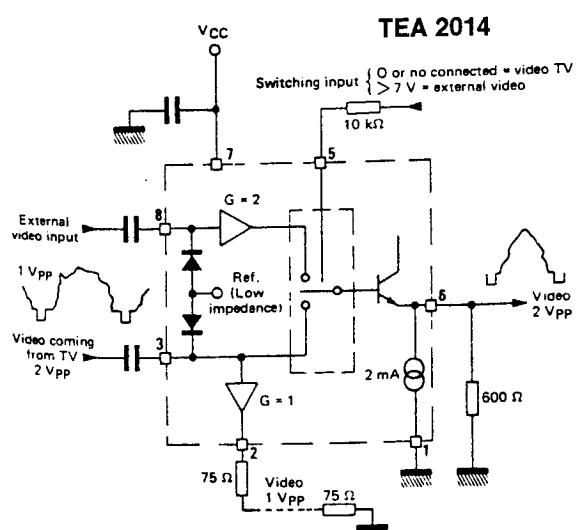

Because of the ever increasing number of interference sources and their negative effects on reception in general, only shielded (75 ohm) antenna cables and antenna plugs (DIN 45325) should be used in the interest of the best possible interference suppression. Unshielded antenna cables, balanced-to-unbalanced matching transformers and antenna plugs often prove insufficient for interference-free reception.

## Remarques relatives au raccordement de l'antenne

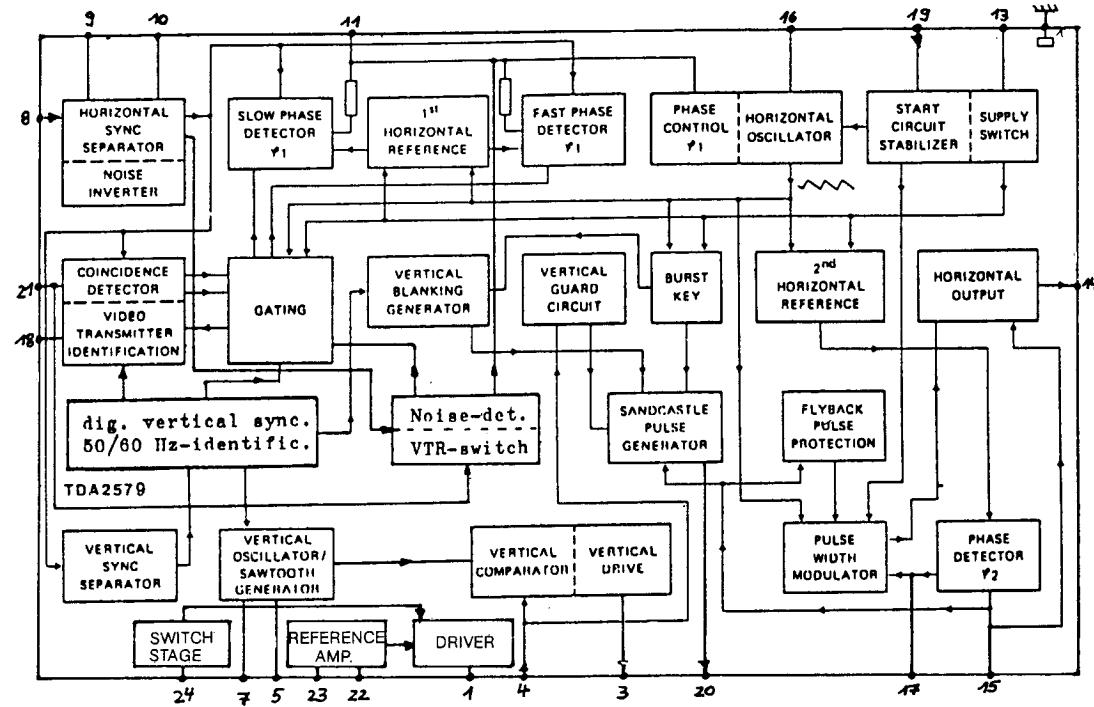

En raison de l'influence de plus en plus directe des rayonnements parasites sur l'appareil, il convient d'utiliser exclusivement des câbles d'antenne (75 ohms) et des fiches d'antenne (DIN 45325) blindés afin d'assurer une suppression optimale des parasites. Des câbles d'antenne, des filtres de symétrisation et des fiches d'antenne non blindés ne suffisent plus, dans la plupart des cas, pour garantir une réception sans perturbations.

## Collegamento antenna

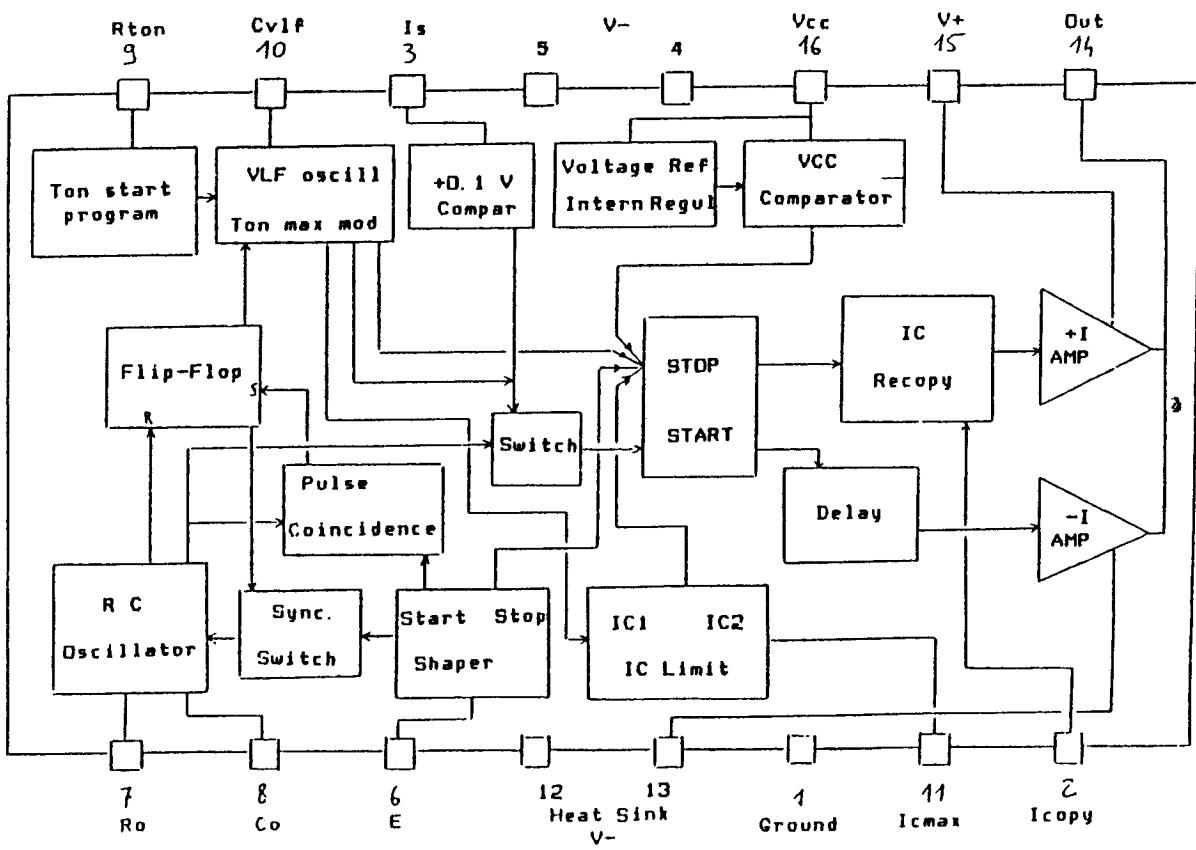

Per via delle radiazioni di interferenza che agiscono oggi in modo accresciuto sul campo periferico diretto degli apparecchi, è necessario, in vista di una soppressione ottimale delle interferenze, che vengano utilizzati esclusivamente fili di alimentazione di antenna (75 ohm) e prese per antenna (DIN 45325) schermati. Oggigiorno, i cavi per antenna, le componenti di simmetria e le prese per antenna non schermati non sono più sufficienti per una ricezione esente da interferenza.

## Instructions for dismantling:

Turn the two red plunger pins by 90°. Remove module from bracket (Fig. 1).

1. Apply pressure to the plate channel simultaneously with both thumbs, until the cover seaming bends, then remove cover (Fig. 1).

2. Before the cover can be put back on, the plate channel must first be pressed back into its proper position from the inside (Fig. 2).

3. Put cover back on.

## Picture and sound IF-adjustment

### Required measuring equipment:

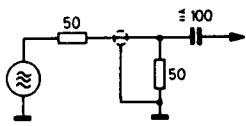

Sweep generator with marker transmitter: 30...42 MHz, max. output 200 mV  
 Signal generator: 5.5 MHz, dispersion  $\pm$  15 kHz,  $f_{mod} = 1$  kHz  
 Oscillograph:  
 RF rectifier probe  
 Bias voltage instrument: adjustable from 0...5 V

### Preparations:

Bias voltage instrument to TZ 30. Check UV 12 V  $\pm$  10% at TZ 23. The cores must be at the upper end of the coil.

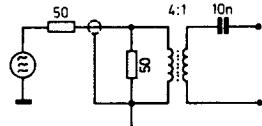

No.	Stage to be adjusted	Connect. sweep gen., transm.	Connect. oscillator.	Adjustment procedure	Oscillograms Remarks	
1.1	UHF/IF filter	Test circuit 1. Sweep gen. via 10 pF to TP 2 (UHF tuner) approx. 300 mV TP 203/204 to earth	Oscillo. via probe to TP 101/102. Amplitude: 10 mV/cm. See Fig. 1	Adjust to max. amplitude and level roof with L 62 and L 64. (VC and SC must have the same height). Bandwidth can be narrowed with L 63.	 37.4 38.9 MHz	
1.2	UHF/VHF/IF-filter	Test circuit 1. Sweep gen. via 10 nF to TP 6 (UHF tuner) approx. 20 mV TP 4 to earth.	Oscillo. via probe to TP 203/204. Amplitude: approx. 20 mV/cm. See Fig. 2	Switch on UHF band. Set 34.5 MHz and 39.5 MHz to same height with L 161/L 162.	 34.5 39.5	
2.	Reference circuit	Test circuit 2. Sweep gen. via interstage transformer (4:1) to TP 201/202 (approx. 20 mV)	Oscillo. to TZ 24. Amplitude 450 mV/cm.	Tune frequency marker 39.5 MHz to max. amplitude with L 206.	 TZ 29 free	
3.	AFC (Not in module 5829 04 51 5829 04 42 5829 04 52)	Test circuit 2. Sweep gen. via interstage transformer (4:1) to TP 201/202 approx. 50 mV.	Oscillo. to TP 205. Amplitude: 2 V/cm. Signalling vol. to TZ 24 $\geq$ 1.5 V	Tune marker 39.5 MHz to zero with L 205. <b>AFC fine tuning:</b> Apply a voltage adjustable from 2...10 V to TZ 29. The zero passage of the S curve must change by $\pm > 250$ kHz.	 38.3 MHz 38.9 MHz	
4.	Monitoring of IF frequency response	Attenuation acc. to test circuit 3. TP 102 to earth via 2.2 nF.	Test circuit 2. Sweep gen. via interstage transf. (4:1) to TP 203/204 (approx. 150 mV)	Oscillo. to T 231. Amplitude: 0.5 V/cm	Set frequency marker 38.1 MHz to 2 $V_{ss}$ $- 0$ dB with bias voltage at TZ 30. Marker 39.5 MHz should lie between $- 5$ dB and $- 7$ dB, marker 35.1 MHz between $- 3$ dB and $- 5$ dB.	 38.1 MHz 34.5MHz 0.5V/cm
5.0	DF-AF stage	Test circuit 4. Signal generator to TP 210 approx. 6 MHz (approx. 10 mV)	Oscillo. to T 321. Amplitude 0.5 V/cm.	Tune L 226 to AF max. and min. distortion factor		
6.0	Monitoring of video signal	With the aid of a standard modulated TV transmitter, the video output voltage should be $2 V_{ss} \pm 0.2$ V.
