Safety Precautions

Important for Laser Products

1. CLASS 1 LASER PRODUCT
2. DANGER: Invisible laser radiation when open and interlock failed or defeated. Avoid direct exposure to beam.
3. CAUTION: Do not open the bottom cover. There are no user serviceable parts inside the unit; leave all servicing to qualified service personnel.
4. CAUTION: The compact disc player uses invisible laser radiation and is equipped with safety switches which prevent emission of radiation when unloading cartridge and the safety interlocks have failed or are defeated. It is dangerous to defeat the safety switches.
5. CAUTION: Use of controls of adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.

ADVERSEL: Usynlig laserstråling ved åbning, når sikkerhedsafbrydere er ude af funktion. Undgå udsættelse for stråling.

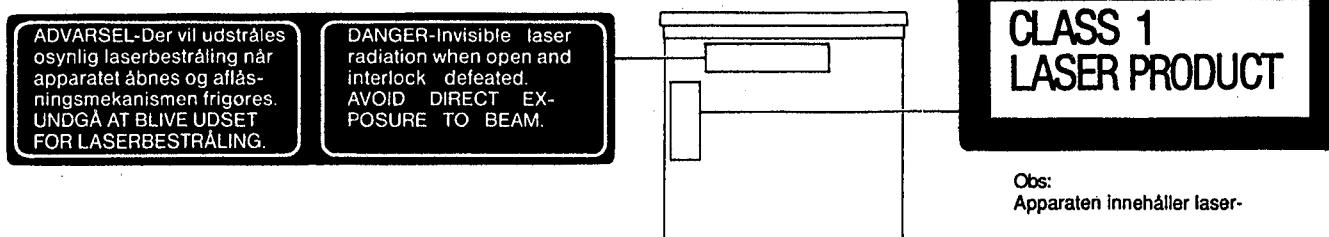

VAROITUS: Varmuuskytkimen ollessa pois päältä kun laite avataan, siellä kehittyy näkymätöitä lasersäteilä. Älä pane itseäsi säteilyn altiiksi.

VARNING: Osynlig laserstrålning uppstår vid komponentens öppning när säkerhetsbrytaren är fränslagen.

ADVARSEL: Usynlig laserstråling ved åpning når sikkerhetsbryteren er ude af funktion Unngå utsettelse for stråling.

SPECIFICATIONS

CD CHANGER/AUDIO AMPLIFIER SECTION

Type: Compact disc player
 Signal Detection System: Non-contact optical pickup (semiconductor laser)
 Number of Channels: 2 channels (stereo)
 Frequency Response: 5 to 20,000 Hz
 Dynamic Range: 95 dB
 Signal-to-Noise Ratio: 98 dB
 Wow & Flutter: Less than measurable limit
 Output Level: 1.5 V/20 kΩ load (Full scale)
 Output Impedance: 1 kΩ
 Maximum Power Output: (Front) 25 W per channel (Rear) 25 W per channel
 Continuous Power Output (RMS): (Front) 12 W per channel into 4 Ω, 40 to 20,000 Hz at no more than 0.8% total harmonic distortion. (Rear) 12 W per channel into 4 Ω, 40 to 20,000 Hz at no more than 0.8% total harmonic distortion.
 Load Impedance: 4 Ω (4 to 8 Ω allowance)
 Tone Control Range
 Bass: ±10 dB at 100 Hz
 Treble: ±10 dB at 10 kHz
 Frequency Response: 40 to 20,000 Hz
 Signal-to-Noise Ratio: 70 dB

RADIO SECTION

Frequency Range
 FM: 87.5 to 108.0 MHz
 AM: (MW) 522 to 1,620 kHz
 (LW) 144 to 279 kHz
 [FM Tuner]
 Usable Sensitivity: 12.1 dBf (1.1 μV/75 Ω)
 50 dB Quieting Sensitivity: 16.3 dBf (1.8 μV/75 Ω)
 Alternate Channel Selectivity: (400 kHz): 65 dB
 Frequency Response: 40 to 15,000 Hz
 Stereo Separation: 30 dB
 Capture Ratio: 1.5 dB
 [MW Tuner]
 Sensitivity: 20 μV
 Selectivity: 35 dB
 [LW Tuner]
 Sensitivity: 50 μV

GENERAL

Power Requirement
 Operating Voltage: DC 14.4 volts (11 to 16 volts allowance)
 Grounding System: Negative ground
 Dimensions (W x H x D)
 Installation Size: 182 x 52 x 165 mm (7-3/16" x 2-1/16" x 6-1/2")
 Panel Size: 190 x 58 x 20 mm (7-1/2" x 2-5/16" x 13/16")
 Amplifier unit : 178 x 25 x 170 mm (7-1/8" x 1" x 6-3/4")
 Gross Weight: 3.6 kg (8 lbs)

USABLE MAGAZINES

3-CD Magazine (XC-M30)

FEATURES

- 3-Disc Magazine Loading System
- Detachable Control Panel
- Direct Disc Select/Skip Play/Search Play/Repeat Play/Random Play/Intro Play
- High Sensitivity Tuner
- AM/FM Stereo PLL Synthesizer Tuner
- 24-Station Preset Tuning (FM-18, AM [MW/LW]-6)
- Preset Scan/Scan/Seek/Manual Tuning
- Strong-station Sequential Memory (SSM)
- Special-preset Station Reserve (SSR)
- SK/DK Traffic Information Reception (G/GE)
- 4-Channel Amplifier System
- Maximum Power Output of 25 watts per channel (Front)/25 watts per channel (Rear)
- Active Hyper-Bass Sound
- Active-illuminated Operating System (AOS)
- Digital Clock Display
- Line Output Terminals (Front/Rear)

IMPORTANT INFORMATION

1. This unit is designed to operate with 12 volts DC, NEGATIVE ground electrical systems only.
2. Replace the fuse with one of the specified rating. If the fuse blows frequently, consult your JVC "IN-CAR ENTERTAINMENT" dealer.
3. If noise is a problem...
 This unit incorporates a noise filter in the power circuit. However, with some vehicles, clicking or other unwanted noise may occur. If this happens, connect the unit's rear ground terminal to the car's chassis using shorter and thicker cords, such as copper braiding or gauge wire. If noise still persists, consult your JVC "IN-CAR ENTERTAINMENT" dealer.

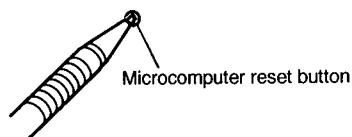

Antenna Noise

If you can hear static noise when listening to either AM (MW/LW) or FM, check for loose antenna connections.

Microcomputer Reset Button

After completing installation and all connections, press this button (using a ball-point pen, etc.) to reset the built-in microcomputer. Use this button only when the power supply is interrupted, such as after replacing the car's battery, when the microcomputer does not function correctly due to noise, or when this unit's buttons do not operate normally.

- When the message "ERROR 11-16" is shown in the display, press the Reset button.
- This unit requires several seconds to fully reset when the Reset button is pressed. Pay attention as the control panel opens after resetting the unit.

Mistracking

Mistracking may occur when driving on extremely rough roads. Although this will not damage the unit or the CD, it can be annoying. We recommend that you stop playback and wait until the road conditions have improved, before restarting the unit.

PRECAUTIONS**1. Avoid Installing In The Following Places**

- Where exposed to direct sunlight, near a heater, or in extremely hot places.
- Where exposed to water or excessive humidity.
- Where exposed to dust.

2. Car's Internal Temperature

Before listening to CDs after your car has been parked for some time in low or high temperatures, wait until the temperature inside the car stabilizes.

3. Condensation

In the following cases, moisture may condense on the lens, a critical part of the CD changer, making the CD signal unreadable:

- When a heater has just been turned on.
- When humidity is high.

In these cases, unload the CD magazine and wait for 1 or 2 hours with the power switched ON to let the moisture dry.

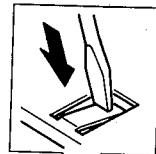

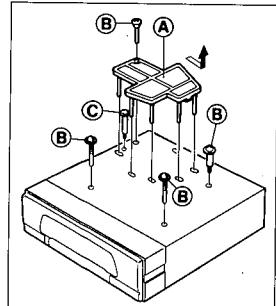

4. Volume Setting

- CDs produce very little noise compared with analog sources. If the volume level is adjusted for these sources, the speakers may be damaged by the sudden increase in the output level. Therefore, lower the volume before operation and adjust it as required during playback.
- Adjust the volume so that you can hear sounds outside the car

INSTALLATION (IN-DASH MOUNTING)

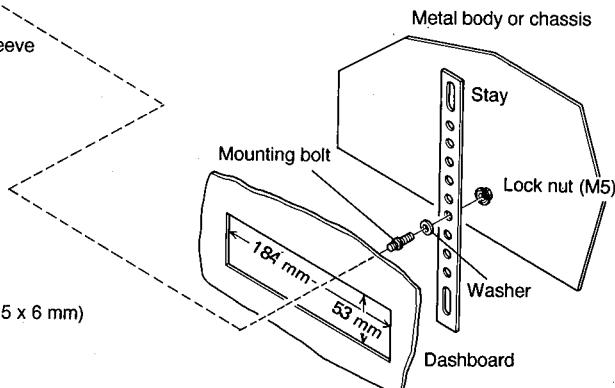

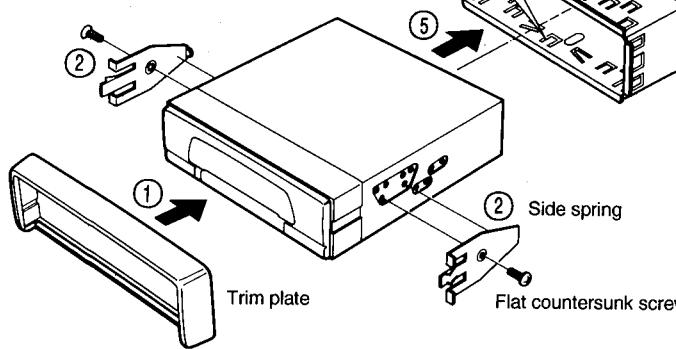

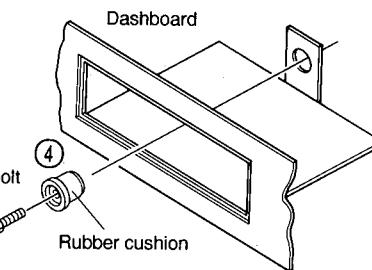

- Before installation, remove the transportation holder ④ fixed by screws ②, and pull out the locking pin ③, as shown.

- The following illustration shows a typical installation. However, you should make adjustments corresponding to your specific car. If you have any questions or require information regarding installation kits, consult your JVC "IN-CAR ENTERTAINMENT" dealer.

- ① Attach the trim plate.
- ② Attach the 2 side springs.
- ③ Install the sleeve in the dashboard.
* After the sleeve is correctly installed in the dashboard, bend the appropriate tabs to hold the sleeve firmly in place, as shown.
- ④ Fix the mounting bolt to the rear of the unit's body and place the rubber cushion over the end of the bolt.
- ⑤ Slide the unit into the sleeve until they are locked together.

- Follow the numbers for mounting.

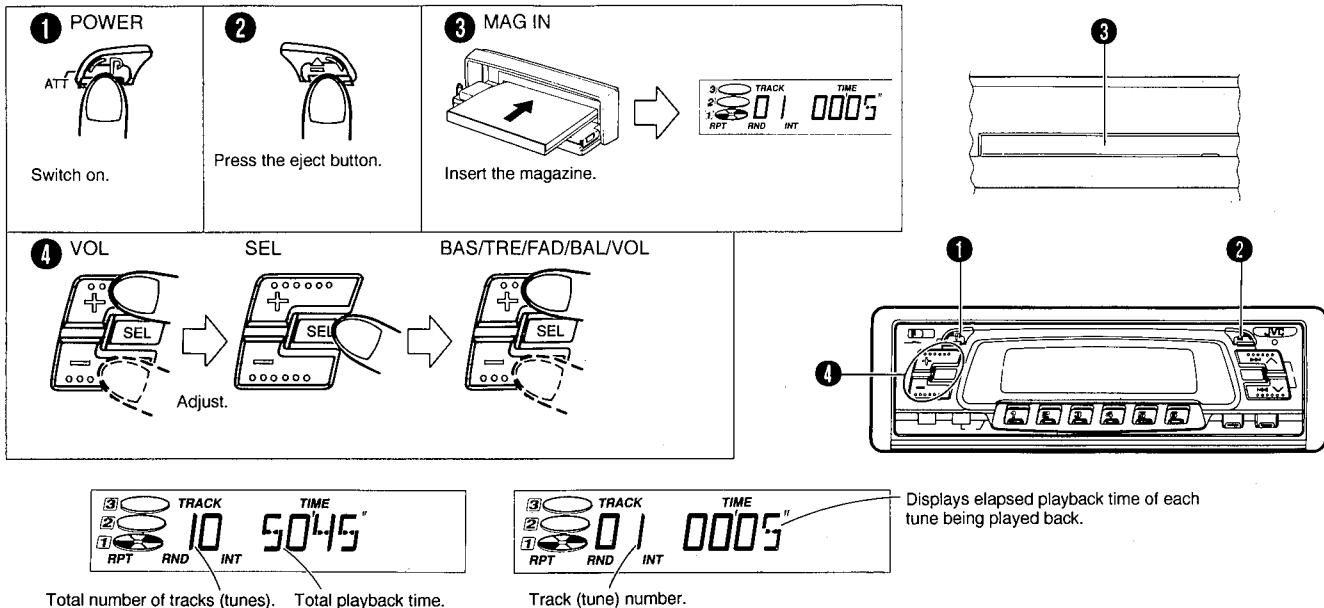

PLAYING COMPACT DISCS

How To Play All Tracks

(Example: assuming 3 discs are loaded in the magazine.)

Operate in the order shown.

- When all tracks on the first disc have been played, the second disc starts automatically from the first track.

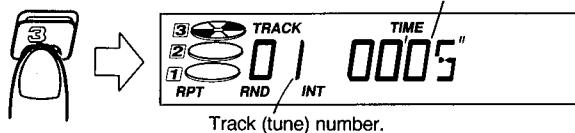

Disc Selection

Direct Disc Selection

Press the Disc No. button (No.1 to No.3) corresponding to the required disc. CD play starts when the Disc Mark, Track No. and Time indicators light.

Example:
(How to designate Disc 3)

Displays elapsed playback time of each tune being played back.

Skip Playback

- During playback, you can easily skip to the beginning of the previous, current, or next track, and playback will start again from there.

How to listen to the next track...

Press the (▶▶) button once to skip to the beginning of the next track.

How to listen to the previous track...

Press the (◀◀) button once to skip to the beginning of the current track, then again to skip to the previous track.

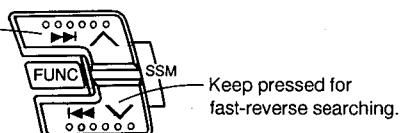

* When disc select and skip operations are performed in sequence, the required track from the required disc can be selected.

Search Playback

(How to locate a required position on the disc.)

- The required position can be located using fast-forward or reverse search during playback.
- Hold down the button to commence searching. (The search speed increases the longer the button is pressed.)
- Since a low sound level can be heard (approx. one quarter of playback), monitor the sound and release the button when the required position is located.

Keep pressed for fast-forward searching.

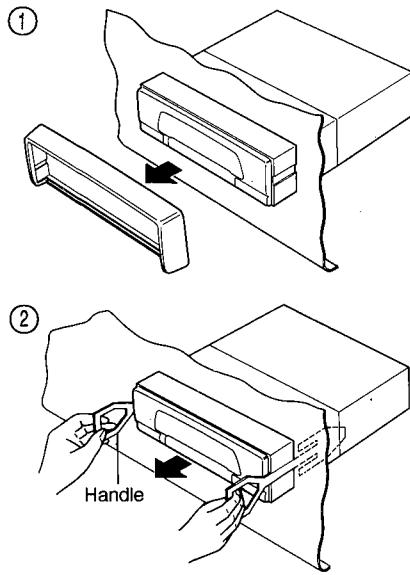

Repeat Playback

Each time the RPT button is pressed, after the MODE button has been pressed and the CD Changer Mode indicators are blinking, the mode changes from RPT I (the REPEAT 1 indicator lights) to RPT II (the REPEAT 2 indicator lights) to Clear mode, in this order.

Removing the unit

- Before removing the unit, release the rear section.
- ① Remove the trim plate.
- ② Insert the 2 handles between the side springs and the sleeve, as shown. Then, while gently pulling the handles away from each other, slide out the unit.

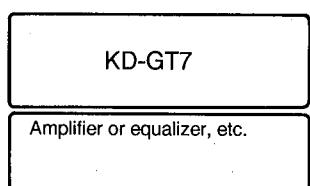

Installing With Other Equipment

When installing this unit with other equipment, make sure it is positioned under them so its temperature does not rise.

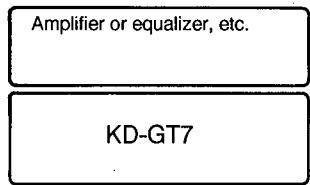

Notes:

1. When installing the unit on the mounting bracket, be sure to use the 6 mm-long screws. If longer screws are used, they could damage the unit.
2. This unit should be installed horizontally. If not possible, install it at an inclination of 20° or less with respect to the front panel.

Incorrect

Correct

Installation (Amplifier section)

Avoid the outlet of the car's heater when installing this unit.

Note:

Since heat is generated in this unit, do NOT mount it near anything which could catch fire. Mount it in a location that will enable the dissipation of heat from the unit. (Avoid installing it under car mats, etc.)

ELECTRICAL CONNECTIONS

To prevent short circuits, we recommend that you disconnect the battery's negative terminal and make all electrical connections before installing the unit. If you are not sure how to install this unit correctly, have it installed by a qualified technician.

Note:

This unit is designed for a 12-volt DC negative ground. If your vehicle does not have this system, a voltage inverter is required, which can be purchased at JVC "IN-CAR ENTERTAINMENT" dealers.

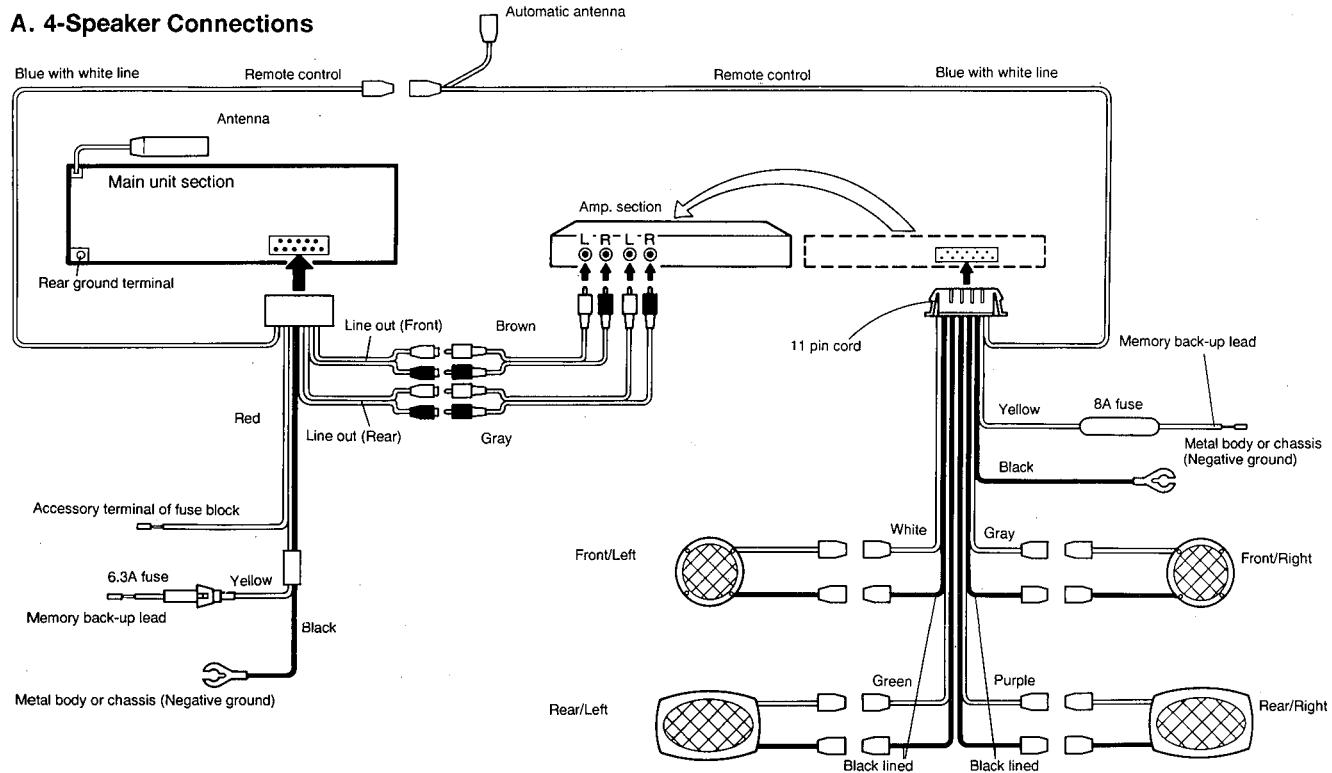

- Maximum input of the speakers should be more than 25 watts at the rear and 25 watts at the front, with an impedance of 4 to 8 ohms.

CAUTIONS:

As this unit uses BTL (Balanced Transformerless) amplifier circuitry (floating ground system), please comply with the following:

1. Do NOT connect the black-lined speaker leads to a common point.
 2. Do NOT connect the speaker leads to the metal body or chassis.
 3. Cover the terminals of the leads that are NOT used with insulating tape, to prevent them from shorting.
- Be sure to ground this unit to the car's chassis.

A. 4-Speaker Connections

12

B. Line Terminal Connections (Line Out)

Since this unit has line-out terminals, an amplifier and other equipment can be used to upgrade your car stereo system.

- With an amplifier, connect this unit's line-out terminals to the amplifier's line-in terminals.

C. Power Aerial (Automatic Antenna) Connections

This unit can perform automatic extension/retraction of a power aerial when the power is turned ON/OFF. The remote lead connection (blue with white lines) from the audio unit is via a separate relay to the aerial motor unit.

D. Memory Back-Up Lead

Connect this lead to a LIVE power source (supplied even when vehicle ignition is OFF).

E. Fader Control

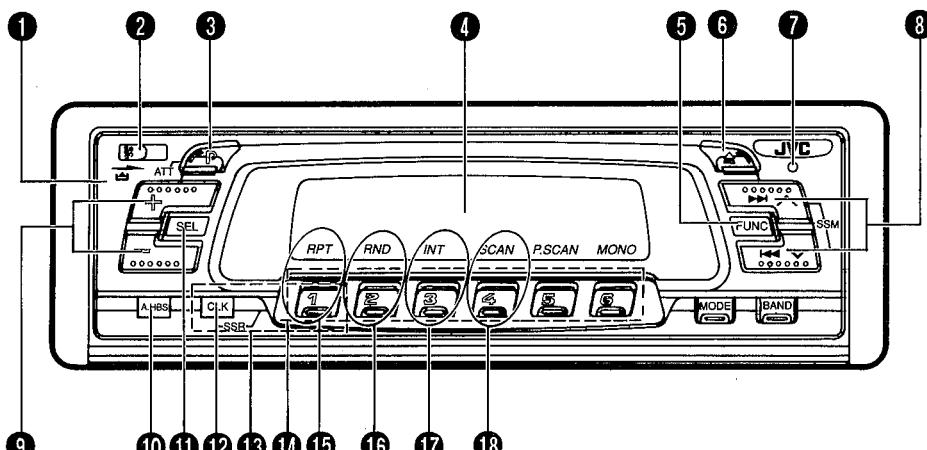

• When used in a 4-speaker system

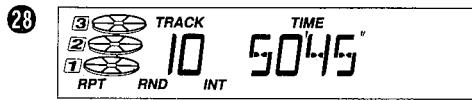

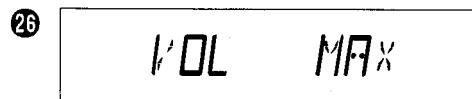

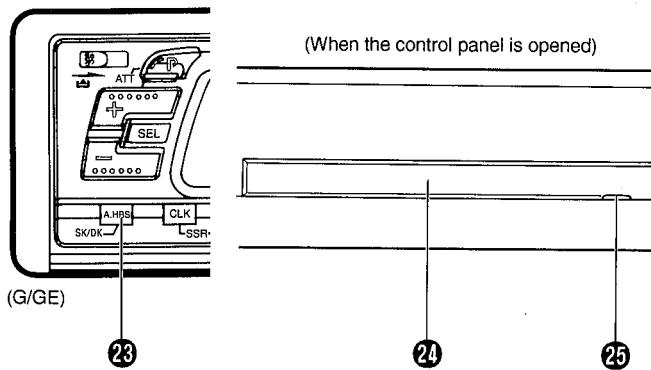

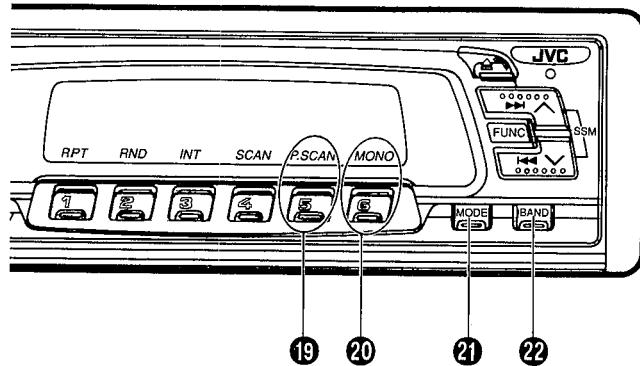

Use this control to balance the volume levels of the front and rear speakers. Set Fader mode using the SEL button and press the + Level Control button to decrease the volume level of the rear speakers, and - to decrease that of the front speakers. The overall volume level can be adjusted in Volume mode. (See page

• When used in a 2-speaker system

Set this control to the center position ("00" is displayed).

LOCATION OF CONTROLS

- 1 Control panel
- 2 Control Panel Release (Δ) switch
- 3 POWER (P)/Attenuator (ATT) switch
POWER: Press to turn the power ON. Press for more than 1 second to turn the power OFF.
ATT: When this button is pressed during operation, the volume drops and the ATT indicator blinks. Press again to return to the original volume.
- 4 Display window
- 5 Function (FUNC) button
- 6 Eject (Δ) button
- 7 Microcomputer Reset button
- 8 Tuning/SSM/Time Adjustment/Skip (search) buttons
Up frequency/Minute adjustment (\wedge)/(\gg)
Down frequency/Hour adjustment (\vee)/(\ll)
- 9 Level Control buttons
Use to adjust the volume, bass, treble, fader and balance.

How To Detach The Control Panel

- ① Slide the Control Panel Release (switch in the direction of the arrow to detach the control panel.
- ② Pull the control panel out of the main unit, as shown below.
- Put the control panel in the provided case for protection.

How To Attach The Control Panel

- ① Align the right side of the control panel with the right side of the holder.
- ② Press the left side to set it correctly.

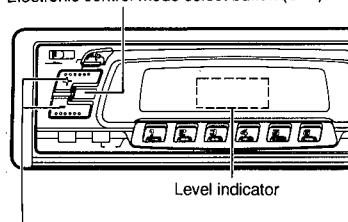

Note:

- Be careful not to damage the connector terminals when attaching/detaching the control panel or while the control panel is removed.

Audio Level Control

Electronic control mode select button (SEL)

Level control buttons

Electronic control mode				
VOL Volume	MIN – MAX	Decreases	MIN – MAX	Boosts
BAS Bass	MIN – 00	Decreases	00 – MAX	Boosts
TRE Treble	MIN – 00	Decreases	00 – MAX	Boosts
FAD Fader	R MAX – 00	Rear	00 – F MAX	Front
BAL Balance	L MAX – 00	Left	00 – R MAX	Right

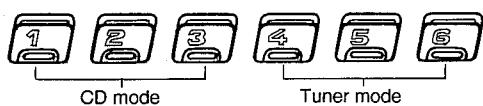

Active Hyper-Bass Sound Button

Press the A.HBS button to listen to hyper-bass sound. (B/E/GI)

Press the A.HBS button for more than 2 seconds to listen to hyper-bass sound. (G/GE)

AOS (Active-illuminated Operating System)

Indicators

The indicators corresponding to each mode turn red in order to make operation simple. (For example the SCAN, P.SCAN and MONO indicators light when Tuner mode engaged. When the MODE button is pressed while in Tuner mode, the SCAN, P.SCAN and MONO indicators blink. If one of the required mode buttons is pressed while the indicators are blinking, the corresponding operation mode is engaged.)

* Each time the power is switched ON, "JVC" is displayed.

* AOS Demonstration mode

In this mode, each of the AOS indicators alternately blinks.

Press the Preset Station button (2) for more than 3 seconds while pressing the FUNC button, to enter AOS Demonstration mode. When in AOS Demonstration mode, normal operation of the unit is possible, with functions being indicated in the display. (After operation is completed, AOS Demonstration mode resumes in 15 seconds.) To cancel this mode, press the Preset Station button (2) for more than 3 seconds while pressing the FUNC button.

CONCERNING COMPACT DISCS AND MAGAZINES

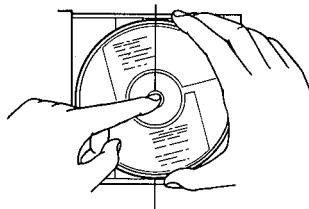

- Use only CDs with the following mark:
- Use only CD magazines with the following mark: (Other magazines cannot be used.)

Notes On Handling Discs

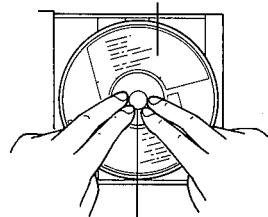

Be sure to keep the discs in their cases. If discs are piled on top of one another without their cases, they may be damaged. Do NOT put discs where they will be exposed to direct sunlight or in places subject to high temperatures and humidity. Avoid leaving discs in your car.

Press down on the center holder.

Lift it out without touching the recorded surface.

Insert with the label facing up.

Gently push the disc to insert it.

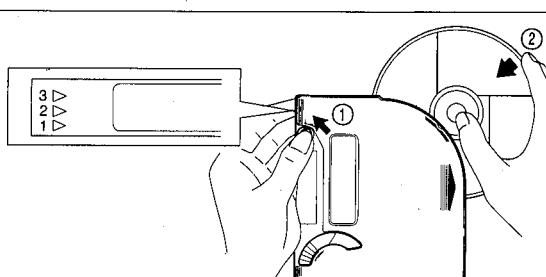

Loading Discs

When loading CDs, insert the discs with the label facing up.

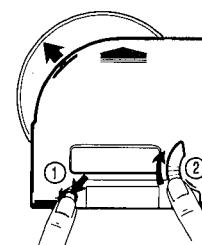

- Disc numbering is as follows: the lowest disc is 1, the middle disc 2, and the top disc 3. Load the discs as required.
- Be aware that if discs are loaded upside down, they CANNOT be played.

Unloading Discs

- ① While pushing the Disc Release knob of the magazine in the direction of the arrow...

Loading Discs**Unloading Discs**

- ② Slide the Disc Eject knob in the direction shown, slightly protruding the discs for easy removal.

**Notes:**

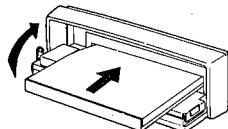

1. Fully insert the CDs when loading them into the magazine.
2. NEVER load more than one CD into each magazine slot.
3. It is recommended to load 3 CDs into the magazine when using it.
4. If there are any rough edges on the CD, be sure to remove them before use.

Note:

When inserting/removing discs, always keep the insertion opening facing upward, to stop the CDs from accidentally falling out.

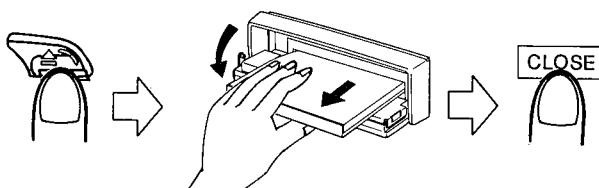

Loading Magazines

- ① Press the Eject button (Δ) to open the Control Panel.
- ② Insert the magazine in the loading slot in the direction shown by mark " \blacktriangleleft ". (After being pushed in part-way, it is automatically pulled in. The Control Panel then closes and CD play starts.)

**Unloading Magazines**

Press the Eject (Δ) button to eject the magazine. The Control Panel opens and the magazine comes out part-way for unloading.

Press the CLOSE button to close the Control Panel after ejection.

**Notes:**

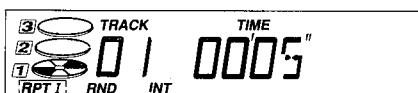

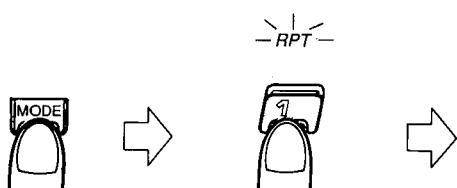

1. After pressing the Eject (Δ) button, do NOT press the CLOSE button when the magazine is still in the loading slot.
2. Magazine loading/unloading is possible even after the vehicle's ignition is turned OFF.

RPT I : Single track repeat

The current or specified track will be played back repeatedly.

RPT II : All-tracks repeat of one disc

All tracks on the current or specified CD will be played back repeatedly.

**Random Playback**

Each time the RND button is pressed, after the MODE button has been pressed and the CD Changer Mode indicators are blinking, the mode changes from RND I (the RANDOM 1 indicator lights) to RND II (the RANDOM 2 indicator lights) to Clear mode, in this order.

RND I :

Randomly plays all tracks on the current disc once, then on each of the following discs in order.

RND II :

Randomly selects and plays tracks from all of the CDs in the loaded magazine.

Δ — RND —

**Intro Scan**

Use to play the first 10 seconds of tracks. With Intro Scan, either the first 10 seconds of all tracks on all discs in the magazine can be intro scanned, or just the first track of every disc in the magazine. Each time the INT button is pressed after the MODE button has been pressed and CD Changer Mode indicators are blinking, the mode changes from Track scan (for all tracks) to Disc scan (for the first track of every disc), to Clear mode.

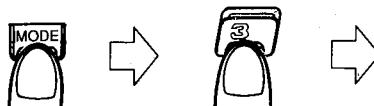

INT I (INTRO 1): Track scan

All tracks on all discs in the magazine are intro scanned. When the required track is located, press the INT button two times to enter Normal Play mode.

INT II (INTRO 2) : Disc scan

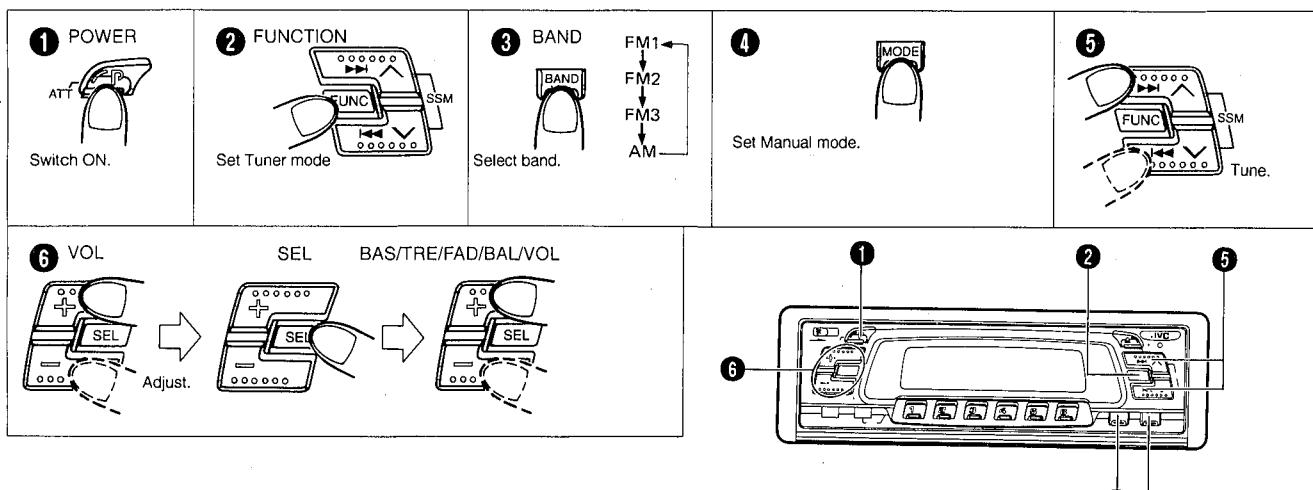

Only the first track on all discs in the magazine is intro scanned. When the required disc is located, press the INT button once to enter Normal Play mode.

Δ — INT —

RADIO OPERATION

Operate in the order shown.

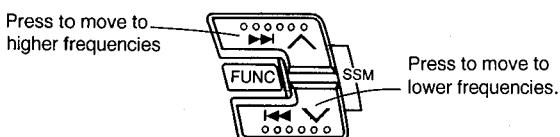

Manual Tuning

Set Manual mode using the MODE button. When the Radio Mode indicators blink, the unit is in Manual mode. Then, by pressing the Tuning button, you can move up/down the frequency band. The band is scanned as long as either side of the button is pressed.

Frequency scan steps are as follows:
FM — in 50 kHz units
MW/LW — in 9-kHz units.

In AM operation, the frequency continuously moves from the MW (522 to 1,620 kHz) to LW (144 to 279 kHz) band and vice versa.

- When approx. 5 seconds have elapsed after completing manual tuning, the unit switches back to Seek mode and the Radio Mode indicators light.

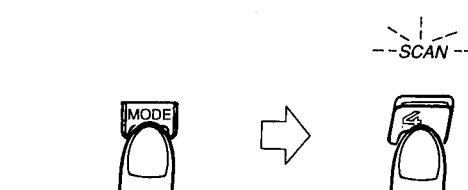

Seek Tuning

The unit is in Seek mode when the Radio Mode indicators light. Then, by pressing the \triangleleft or \triangleright button, the unit tunes to the adjacent station with a higher or lower frequency. In AM operation, the frequency continuously moves from the MW to LW band and vice versa.

Scan Button Tuning

Use the SCAN button for automatic scanning of the FM and AM (MW/LW) frequency bands. Press this button after the MODE button has been pressed and the Radio Mode indicators are blinking, each station is monitored for approx. 5 seconds (the frequency blinks during this time). After 5 seconds have elapsed, the frequency advances to the next station which in turn is monitored for 5 seconds. To stop scanning, press the SCAN button again.

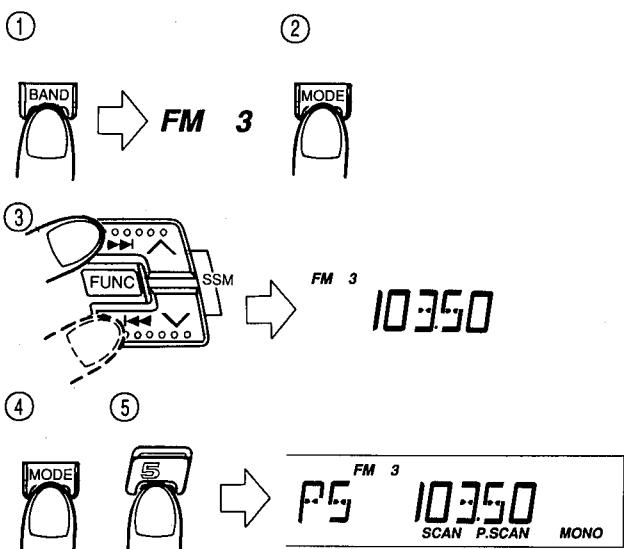

Preset Button Tuning

How to Preset Stations

6 stations in each band (FM1, FM2, FM3 and AM [MW/LW]) can be preset as follows:

- Example (when presetting Preset Station button "5" of the FM3 band to an FM station at 103.5 MHz)

- Select the FM3 band using the BAND button.
- Set Manual mode.
- Tune to the desired station.
- Press the MODE button to release Manual mode.
- Press Preset Station button "5" for more than 2 seconds. (When "MEMO" is displayed and "P5" blinks in the Preset Station display, the station is preset.)

- Repeat the above procedure for the other 5 Preset Station buttons and other bands (FM1, FM2 and AM [MW/LW]).

Notes:

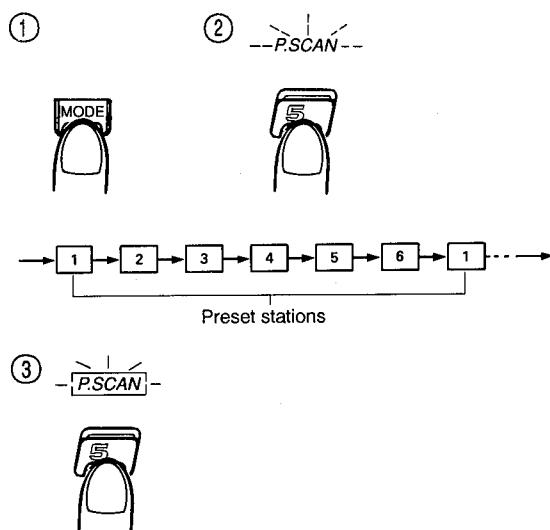

- A previously preset station is erased when a new station is stored in memory.
- The preset stations are erased when the power supply to the memory circuit is interrupted during battery replacement, etc. When this occurs, preset the stations again.

Preset Tuning

- ① Select the band.
- ② Press the required Preset Station buttons (No.1 to No.6).

Preset Scan Button Tuning

This function makes it possible to automatically scan preset FM and AM (MW/LW) stations.

- ① Press the MODE button (Radio Mode indicators blink).
- ② Press the P.SCAN button.
 - Scanning is performed in the order of the preset stations in each frequency band (FM1, FM2, FM3 and AM [MW/LW]). Each preset station is heard for approx. 5 seconds.
- ③ When the required station is heard, press the P.SCAN button again.

Strong-Station Sequential Memory (SSM)

This function searches for FM and AM (MW/LW) stations broadcasting strong signals. The 6 strongest stations are held in memory in the order of increasing frequency, and can be recalled with the Preset Station buttons (No.1 to No.6).

(Procedure)

- ① Press the SSM buttons (\wedge , \vee) for more than 3 seconds.
- ② The strongest signals in the band you are listening to (FM1, FM2, FM3 or AM [MW/LW]) will be searched and selected automatically. Six stations are preset in the Preset Station buttons (No.1 to No.6), in the order of increasing frequency. (During this operation, "SSM" lights in the display.) The unit then automatically tunes to the broadcast stored in Preset Station button "1".

Note:

Previously preset stations are canceled automatically when SSM is used.

Mono Button

When listening to FM, set the MONO button to stereo or mono after the MODE button has been pressed and the Radio Mode indicators are blinking.

Note:

Set to mono when a stereo FM broadcast is too noisy and cannot be heard satisfactorily.

Receiving Traffic Information Broadcasts (G/GE version only)

1. Select the FM1, FM2 or FM3 band using the BAND button.
2. Press the SK/DK button before operation. The SK/DK indicator lights.
3. Perform Seek Tuning to search for a station broadcasting traffic information. When such a station is received, the SK/DK indicator will light and the broadcast can be heard.
4. As long as the tuner is set to receive traffic information stations, even if you are listening to a CD, when traffic information is broadcast, it is automatically heard. When the broadcast is over, CD playback restarts. While listening to traffic information broadcasts, if the signal becomes weak, a stronger station is searched for automatically.

Traffic Information Volume Control

This function adjusts the volume of traffic information broadcasts.

1. Press the SK/DK button while pressing the SEL button; "INFO" will be displayed.
2. While "INFO" is displayed, set the required volume using the Volume Level Control buttons.

Notes:

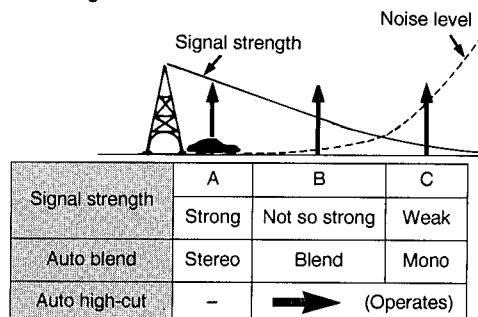

1. The SK/DK button operates when in FM mode only.
2. When listening to an FM broadcast, if the tuner is not set to a traffic information station, after approx. 3 seconds an alarm tone will be heard. If the reception is poor, after approx. 30 seconds an alarm tone will be heard. In such a case, perform Seek Tuning or press the SK/DK button.

FM Pulse Noise Suppressor

This unit has built-in circuitry to effectively eliminate engine noise picked up by the antenna, etc. in the form of FM pulses, for a more favorable FM reception.

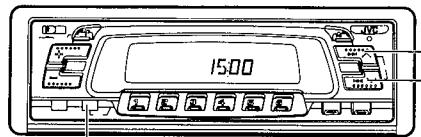

Automatic FM Noise Suppressor (AFNS)

This unit incorporates an automatic FM noise suppression circuit to ensure satisfactory reception of FM broadcasts when a vehicle is moving and signal strengths are continuously fluctuating.

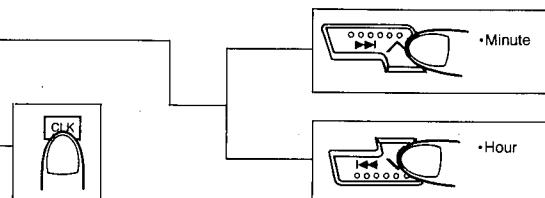

DIGITAL CLOCK DISPLAY

To select Time mode, press the CLK button. When the radio or a CD is operated in Time mode, the displayed time switches to the frequency or elapsed playback time, and returns to Time mode after a few seconds. Press the CLK button again to cancel Time mode.

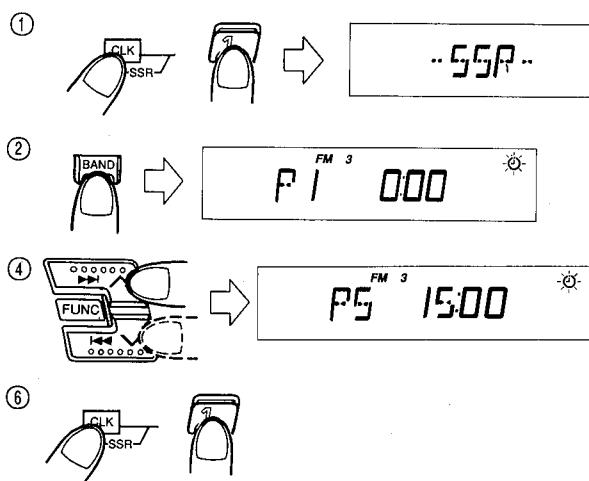

How To Adjust The Time

Make sure the display is in Time mode, then, while pressing the CLK button, press the Hour Adjustment button (↖) to adjust the "hours", and press the Minute Adjustment button (↗) to adjust the "minutes".

SSR (Special-preset Station Reserve)

The SSR (Special-preset Station Reserve) automatically tunes to any FM or AM preset program once a day, at a programmed time from any of the operating modes; tuner or CD. This function guarantees that you will not miss important information such as weather reports or traffic information, etc.

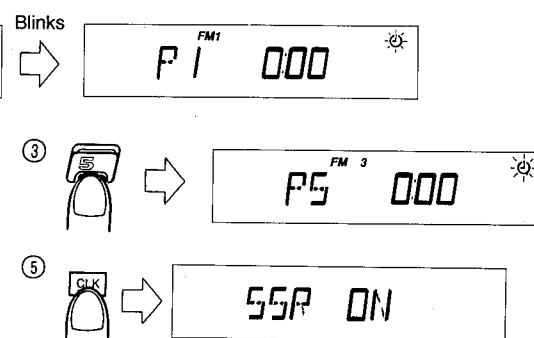

(Procedure)

- ① While pressing the CLK button, press the Preset Station button (1) for more than 2 seconds to preset the program. ("⊕" indicator blinks.)
- ② Perform the next operation while the "⊕" indicator blinks.
- ③ Select the required band (i.e. FM3 in the example) using the BAND button.
- ④ Select the required station (i.e. 5) which has been preset using the Preset Station button.
- ⑤ Set the required time (i.e. 15:00) using the Time Adjustment buttons.
- ⑥ Set SSR to ON using the CLK button.
- ⑦ Press the Preset Station button (1) for more than 2 seconds while pressing the CLK button, to preset SSR. (Presetting is completed when the SSR ON indicator blinks and the "⊕" indicator lights.)
- If the "⊕" indicator stops blinking during presetting, perform the operation again from procedure ①.

- Set the current time before using SSR. (See page 42.)
- The station must be preset before using SSR. (See page 36.)

Example: When setting the FM station which has been preset to Preset Station button (5) of the FM3 band to 15:00.

- While the CLK button is pressed, press the Preset Station button (1) once to check the preset program.
- In order to switch SSR mode OFF after SSR presetting, operate procedures ①, ⑥ and ⑦, however set SSR to OFF in step ⑦. (When the "⊕" indicator has gone out, SSR mode is canceled.)

Notes:

- Once SSR has been set, the start time and broadcast station are stored in the microprocessor. When changing the start time and/or broadcast station, perform procedures ① to ⑦ again.
- After setting SSR, if the preset station is changed, the renewed station data is stored as the program station of SSR.

MAINTENANCE

• Cleaning The Connector

If the control panel is frequently detached, a poor connection may occur with the control panel holder. To minimize this possibility, periodically wipe the connector with a cotton swab or cloth moistened with alcohol, being careful not to damage the connector terminals.

1 Location of main parts

■ KD - GT7 Top side view

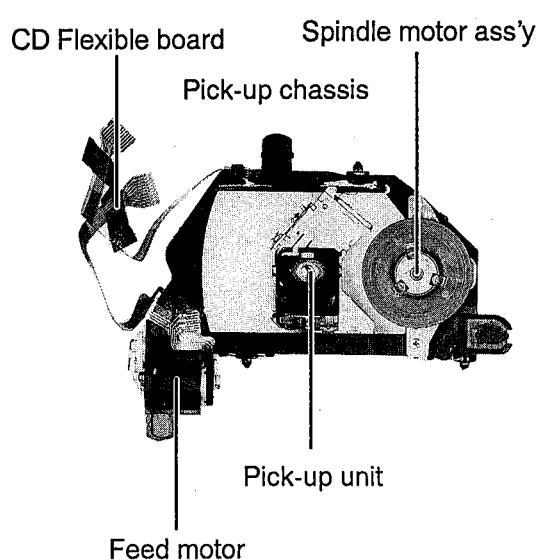

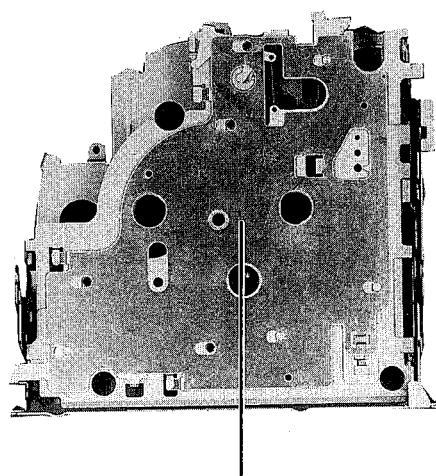

Fig. 1 - 4

■ Magazine holder unit (Top side view)

Magazine holder unit

Fig. 1 - 5

2 Removal of main Parts

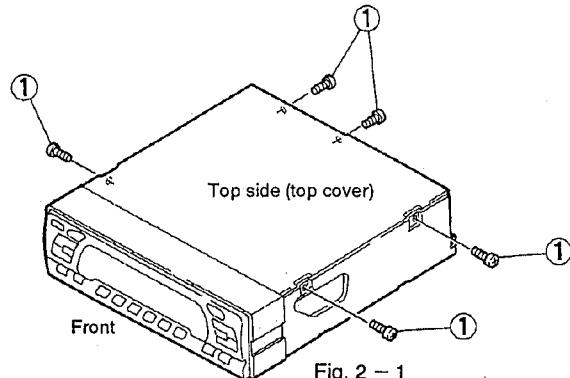

■ Enclosure section

- Set maintenance mode before disassembling the unit.

◆ Setting maintenance mode

Switch ON the power and press the SEL button while the reset button is pressed. Release the reset button first, then release the SEL button after a few seconds. The door opens and the mechanism operation stops to engage maintenance mode.

(When the P.C.B.s are installed and mechanical operations are performed, install them so that the switches and levers do NOT hit each other.)

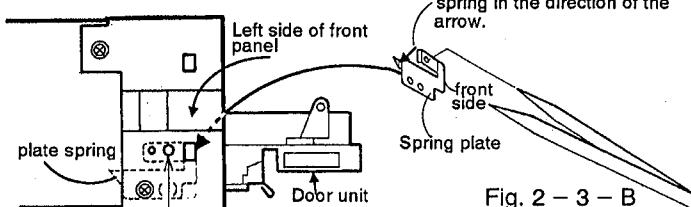

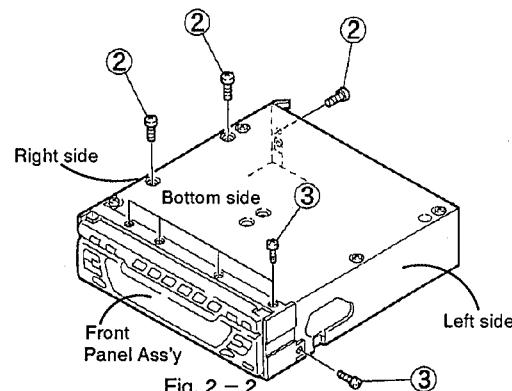

◆ Top cover(See Fig. 2-1)

Remove the five screws ① retaining the top cover.

◆ Front panel ass'y (including control unit)(See Fig. 2-2 and Fig. 2-3)

1. Turn the KD - GT7 upside down and remove the three screws ② retaining the right chassis.
2. Remove the five screws ③ retaining the front panel ass'y.
(Open the door or remove the control panel and remove the combination of the door bracket near the left side and door open/close gear near the chassis.)

Remove the plate spring and center shaft
(GEAR SHAFT) see through this hole.

Fig. 2 - 3 - A

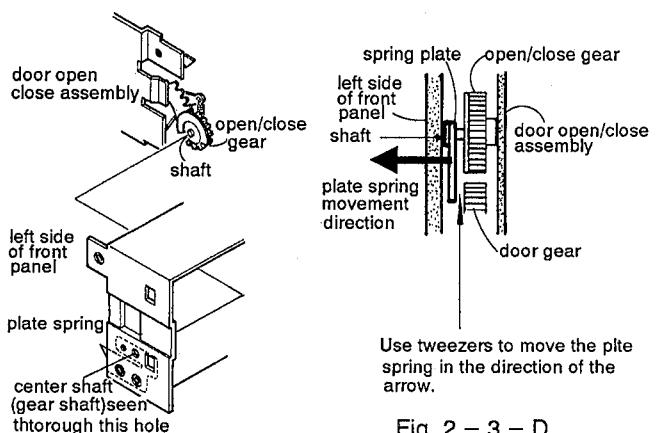

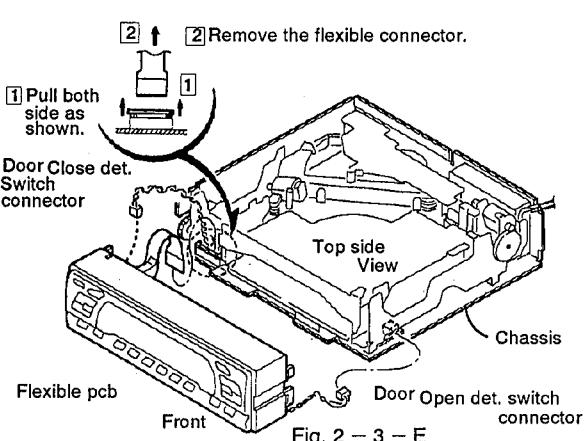

Fig. 2 - 3 - D

3. Turn the unit top side upward and disconnect the two connectors; one on the left side of the front panel and the other on the right side of the unit.

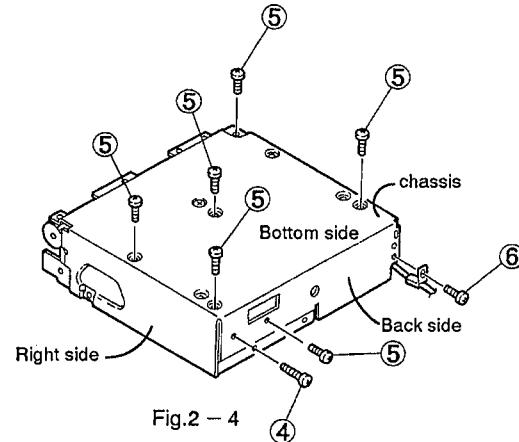

The connector on the right side of the unit is for the door-open detection switch.

The connector on the left side of the front panel is for the door-close detection switch.

4. Remove the front panel ass'y from the chassis and remove the flexible PCB connector from the main PCB.

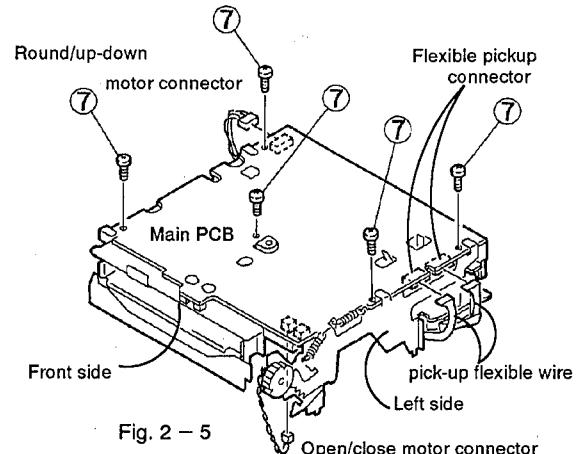

◆ Chassis(See Fig. 2-4)

1. Remove the seven screws ④ and ⑤ retaining the chassis.
2. Remove the screw ⑥ retaining the antenna cord.
3. Remove the chassis. (Be careful NOT to lose the IC plate during removal.)

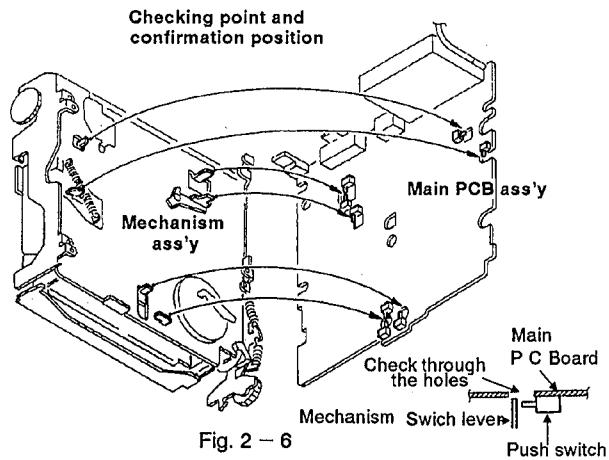

◆ Main PCB Ass'y(See Fig. 2-5 and Fig. 2-6)

1. Disconnect the four connectors from the main PCB.
Remove the flexible pickup connector from the left side of the unit.
Remove the round/up-down motor connector from the right side of the unit.
Remove the door motor connector from the front side of the unit.
2. Remove the five screws ⑦ retaining the main PCB ass'y, then remove the main PCB ass'y.

Note when assembling

Before installing the main PCB ass'y, check through the 6 holes of the main PCB that the switch lever is NOT overlapped by the push switch.

■ Disassembling the mechanism

Notes:

- When the mechanism parts are disassembled and reassembled, it is easy to damage the switches on the PCB. Therefore, disassemble the main PCB ass'y before removing the mechanism parts.
- Set the unit to Maintenance mode before disassembly. (If it is NOT possible, perform trouble section section.)
- Check that the magazine rack faces downward. (If it is NOT possible, perform trouble shoot section)

Disassembly of the unit can be performed after checking the above.

◆ Magazine holder unit(See Fig. 2-7~ig. 2-9)

- Remove the two screws ② retaining the magazine holder unit.
- Release the engagement lever with the rear of the unit slightly elevated, then slide the magazine holder unit toward you to remove it.

Checking points when assembling(See Fig.2-7 and Fig. 2-10)

Check the engagement lever through the holes in Fig. 2-7 and apply a locking component.

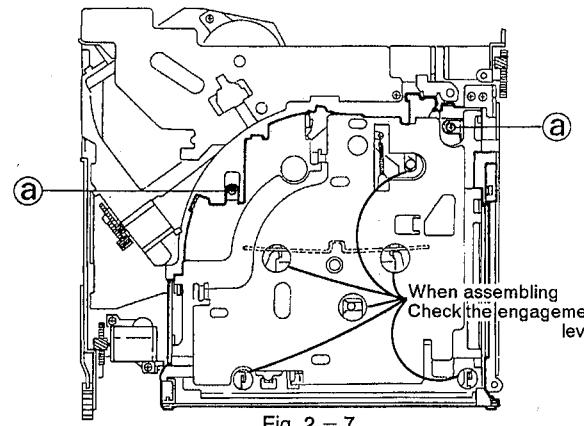

Fig. 2 - 7

The bottom side of the magazine holder

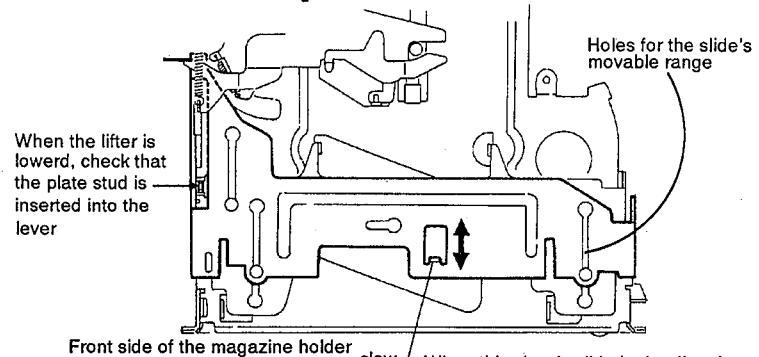

Fig. 2 - 8

When this claw is slide in the direction of the arrow, the magazine lifter move up and down(The illustration shows the lifter in the lower position.)

If the plate stud is NOT inserted into the lever, perform the following

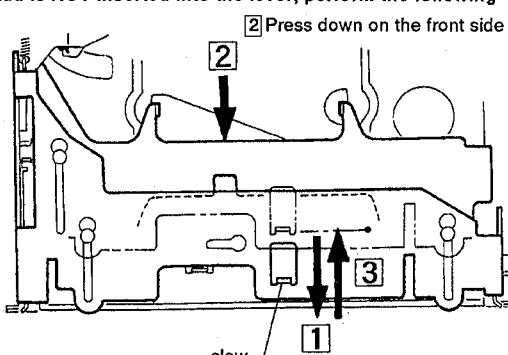

Fig. 2 - 9

- Slide the claw in the front direction
- When the claw is slide in the rear direction, the correct engagement position is obtained.

Check the parts engagement through the holes shown in Fig. 2 - 7

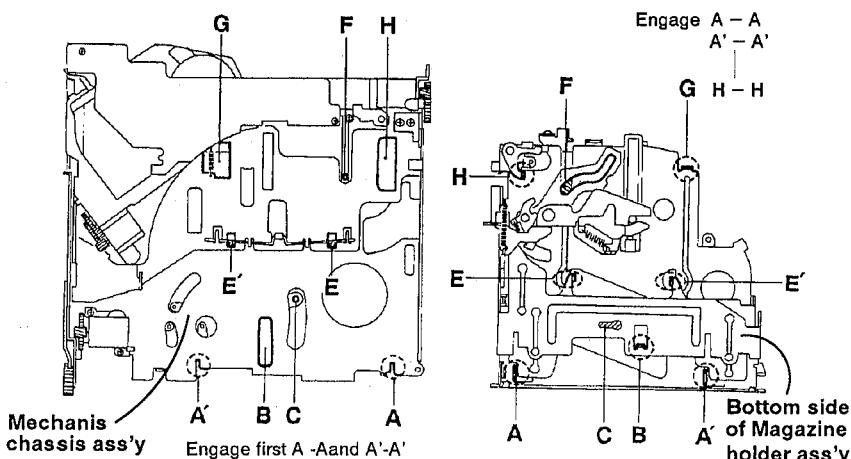

Fig. 2 - 10

◆ Door opener unit(See Fig. 2-11 ~Fig. 2-13)

1. Remove the two screws ⑥ retaining the door opener unit on the left side of the unit.
2. Remove from the rear of the unit and slide the unit toward you to disengage the claws of the front panel.

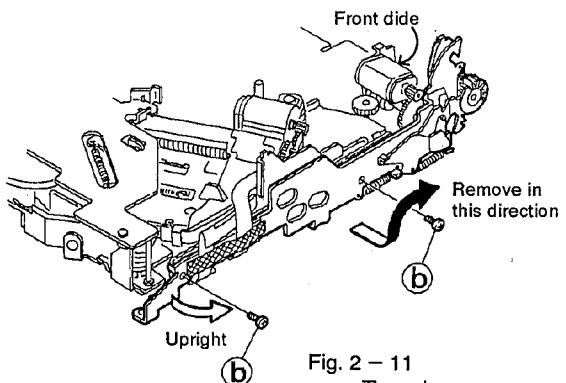

Fig. 2-11
Top view

◆ Guide plate unit(see zfig. 2-14 and Fig. 2-15)

Remove the two screws ⑦ retaining the guide plate ass'y.

◆ Pickup unit(See Fig. 2-16)

1. Disengage the guide plate ass'y.
2. Remove the three nuts ⑧ fixing the pickup chassis.
3. Remove the damper spring from the pickup - chassis by disengaging the 3 claws ⑨.
4. From the chassis holes on the left side, press the levers and - open the pickup chassis holder to remove the pickup unit.

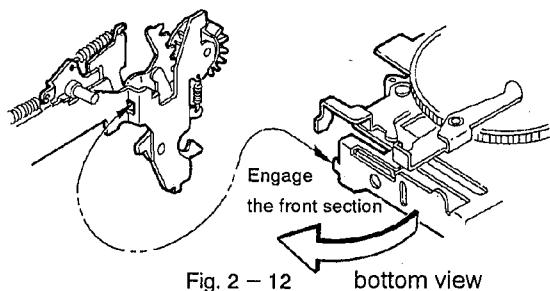

Fig. 2-12 bottom view

Assembling illustration

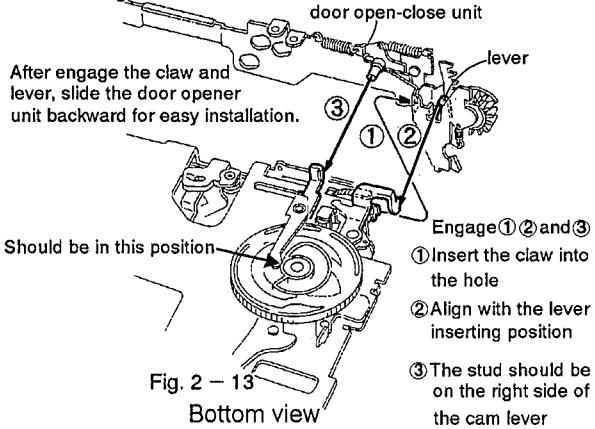

Fig. 2-13
Bottom view

◆ Spindle motor assembling(See Fig. 2-16)

1. Remove the two screws ⑨ retaining the spindle motor.
2. Remove the solder of the spindle motor wire from the back side of the pickup chassis.

◆ Pickup assembling(See Fig. 2-17)

1. Remove the two screws ⑩ fixing the pickup feed shaft.
2. When replacing the pickup, remove the leaf spring of the sliding section.
3. Perform flexible connector processing in the same way as in the parts replacement.

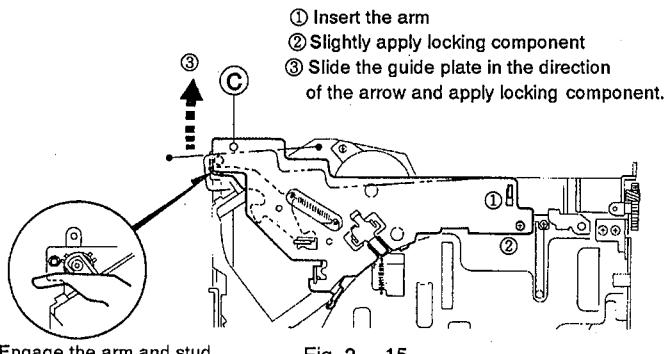

Fig. 2-15

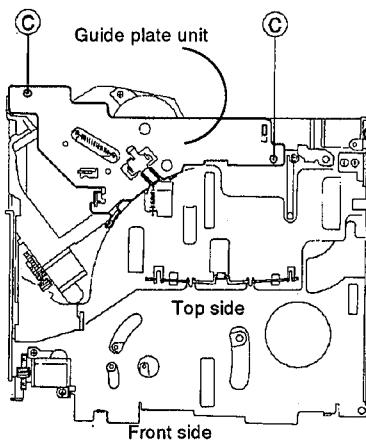

Fig. 2-14

◆ Motors (open-close/round/up-down motors)

● Open-close motor unit(See Fig. 2-18)

1. Remove the two screws ① retaining the actuator motor unit.

(When removing the motor ass'y only, remove the two screws ⑩.)

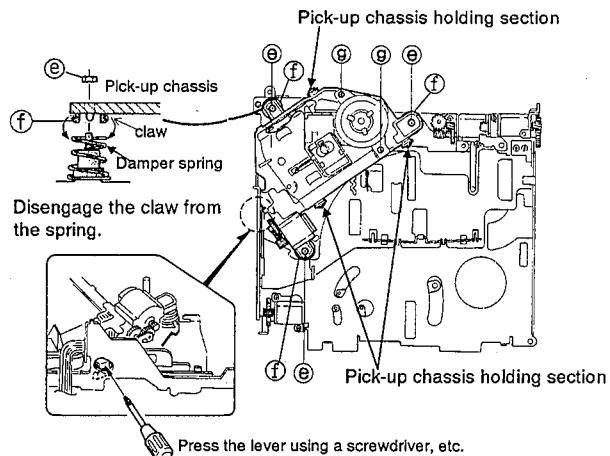

Fig. 2 - 16

● Round motor unit(See Fig. 2-18)

1. Remove the two screws ⑫ retaining the round motor unit.
2. Remove the two screws ⑪ retaining the motor ass'y.

● Up-down motor unit(See Fig. 2-18)

1. Remove the three screws ⑬ retaining the up-down motor ass'y.
2. Remove the two screws ⑭ retaining the motor ass'y.

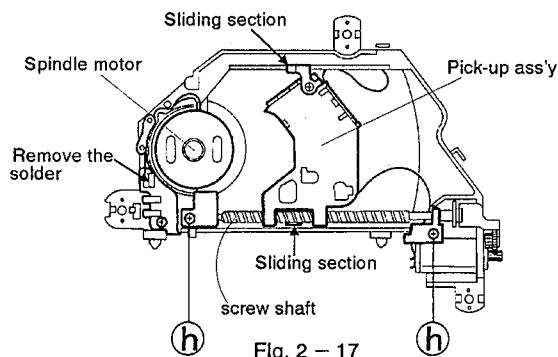

Fig. 2 - 17

◆ Sub-chassis unit(See Fig. 2-19)

1. Remove the two screws ⑮ and ⑯ retaining the sub-chassis bracket. (When the bracket is removed, the sub-chassis is removed simultaneously.)

★ Notes when assembling(See Fig. 2-20)

1. Insert the stud into the slit of the chassis on the left side.
2. Check that the movable parts are fixed and NOT floating on the main chassis.

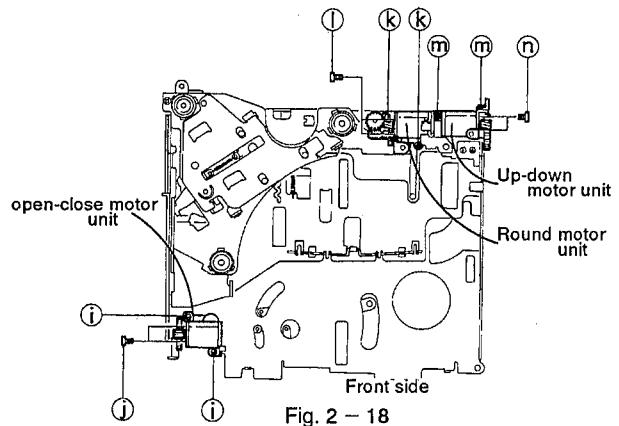

Fig. 2 - 18

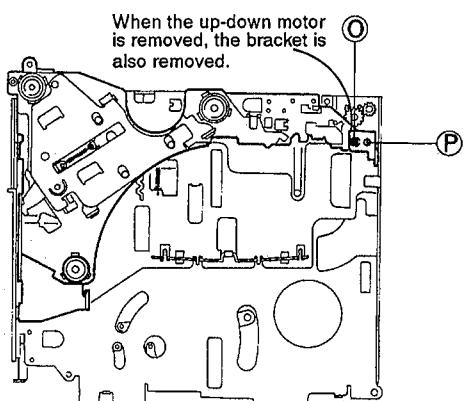

Fig. 2 - 19

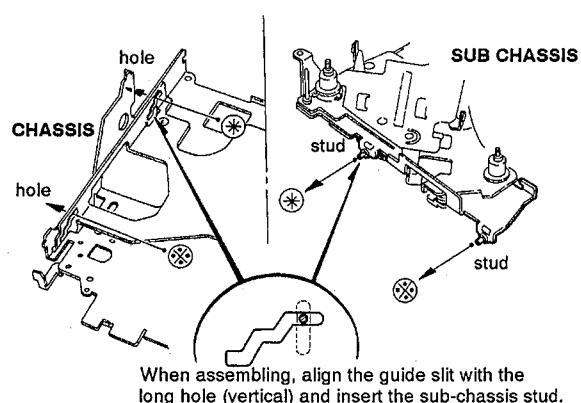

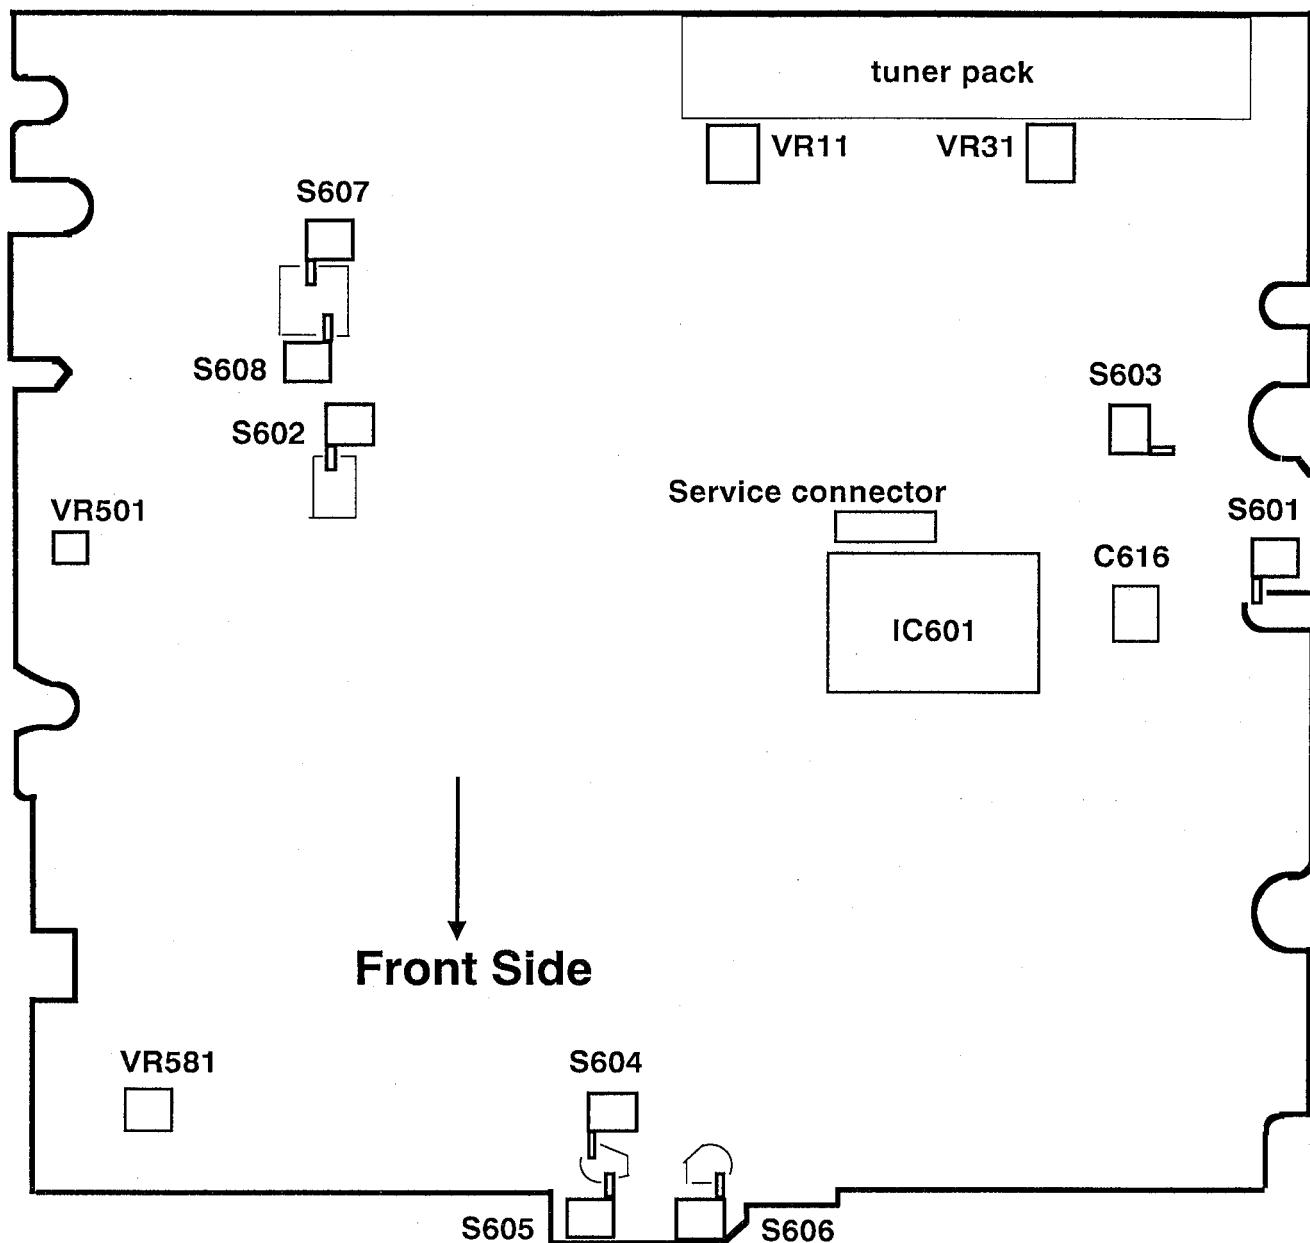

Fig. 2 - 20

■ Equipment required

- ◊ AM standard signal generator
- ◊ FM standard signal generator
- ◊ Stereo modulator
- ◊ Oscilloscope(Digital oscilloscope(100MHz)
- ◊ Electric volt meter
- ◊ Digital tester
- ◊ tracking offset meter
- ◊ Pulse jitter meter

■ CD Section

● Measuring instruments

- ◊ Test disc (JVC CTS - 1000)
(CRG - 1242)

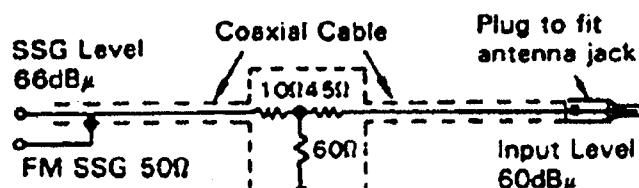

■ Radio section

● Measuring instruments

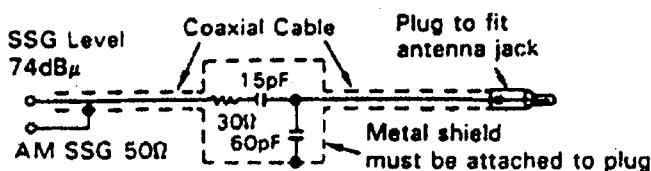

- ◊ FM : 400Hz, 22.5kHz deviation
- ◊ FM STEREO : 1kHz, 67.5kHzDEVIATION
Pilotsignal : 7.5kHz
- ◊ AM : 400Hz, 30%, modulation
- ◊ Output impedance : 50 Ω

● Dummy antenna

- ◊ FM dummy antenna

- ◊ AM dummy antenna

● Preset memory initialization

Band	Preset Memory					
	M1	M2	M3	M4	M5	M6
FM (MHz)	87.5	89.9	97.9	105.9	108	87.5
MW (kHz)	144	153	522	603	1404	1620

- ◊ Manual Tuning (UP-DOWN) frequency

FM : 50kHz step

AM : 9kHz step

● Input level

- ◊ FM : 66dB μ V(SSG OUT LEVEL)

- ◊ AM : 74dB μ V(SSG OUT LEVEL)

■ Adjusting jig list

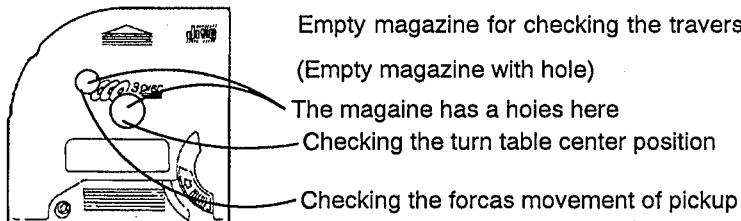

◆ Test disc

Test disc JVC CTS - 1000
CRG - 1242

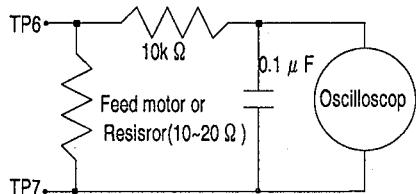

◆ Jig wire

	VWH216 - 16FPZ - JIG	16Pin connector(CN601)card wire Main board to control panel
	VWH211 - 11FPZ - JIG	16Pin connector(CN501)card wire Main board to CD mechanism
	VWH210 - 10FPZ - JIG	16Pin connector(CN502)card wire Main board to CD mechanism
	VDM3450 - 008CA	8Pin connector(for chackerjig board)
	VDM3450 - 006CB	6Pin connector(CN603) Main board to round /up-doun motor
	VDM3450 - 002CC	2Pin connector(CN602) Main board to open-close motor

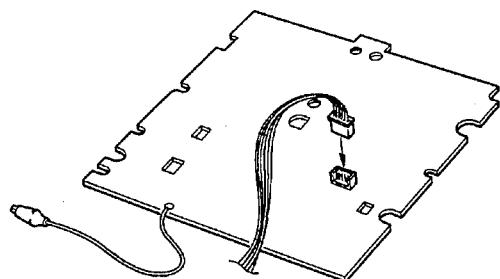

◆ Jig magazine

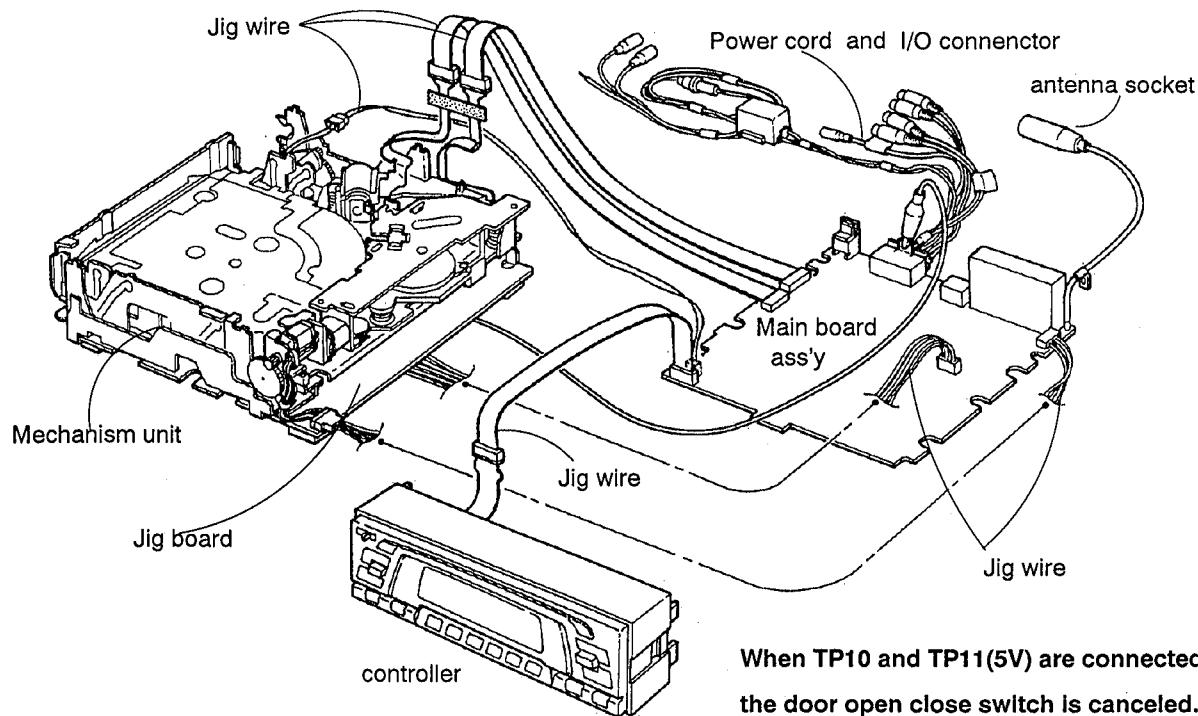

◆ Feed motor adjusting jig

◆ Adjusting jig board

◆ Jig wire connections

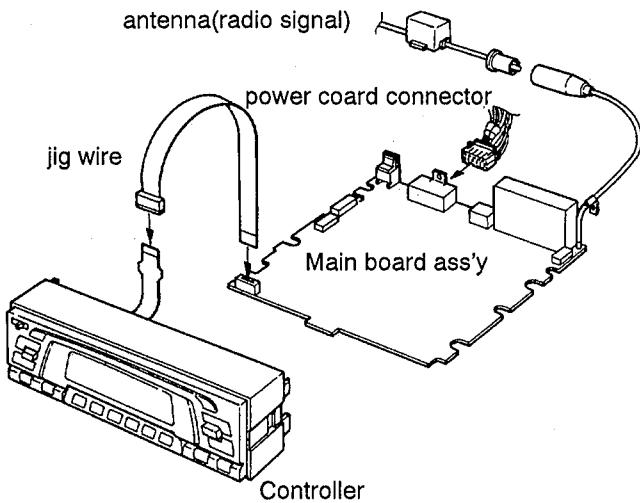

**When TP10 and TP11(5V) are connected,
the door open close switch is canceled.**

◆ How to repair the radio

1. Follow the disassembly procedure to remove the external casing, internal mechanism and main P.C.B.
2. Short circuit CP604 on the main P.C.B. with solder. (Door open/close SW.)
3. Use the 16-pin connector wire (VWH216-16FPZ-JIG) to connect the operation panel and main P.C.B.
4. Connect the power cord and antenna to the main P.C.B.
5. Switch the unit ON and set radio mode in the following procedure:
 - 1) Switch ON the DC power supply.
 - 2) After PL101 on the main P.C.B. lights, it goes out 15 seconds later.
 - 3) Five (5) seconds after PL101 goes out, switch ON the power of the GT7. After ERROR is displayed for 5 seconds the power of the GT7 is switched ON, then select radio mode.

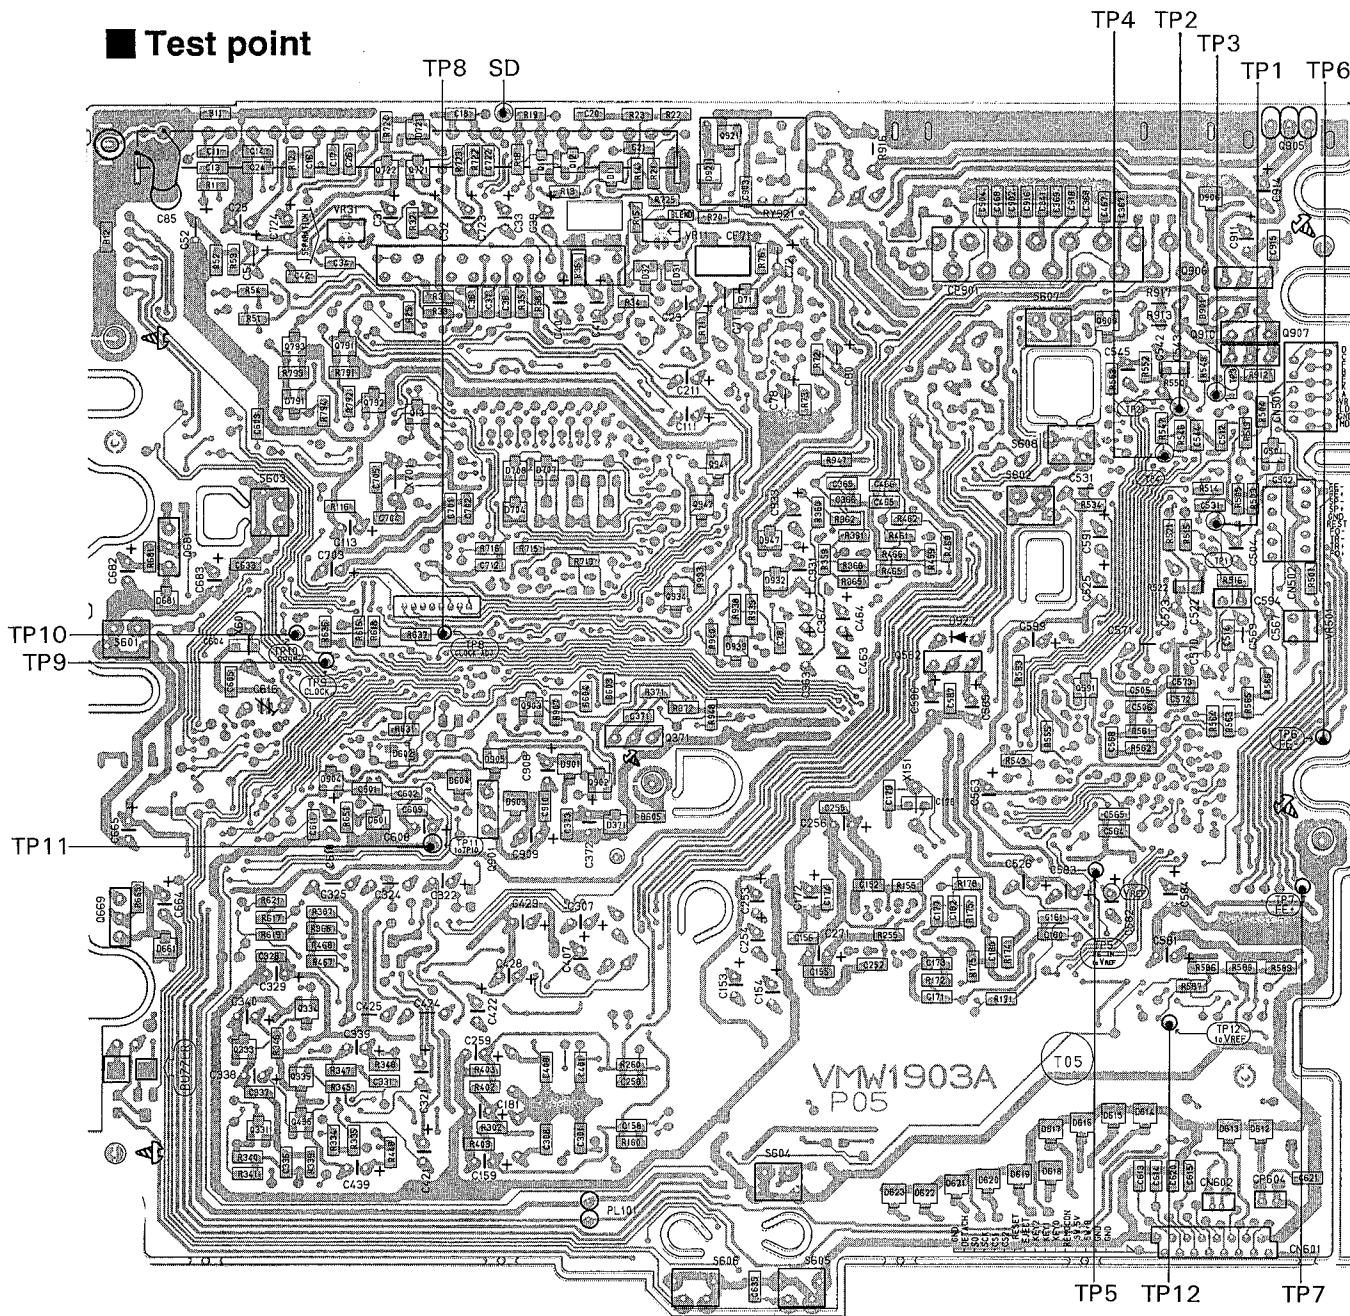

The above procedure repairs the radio.

Note:

When the power is switched OFF during the above operation, leave the unit for 5 seconds before switching ON again.

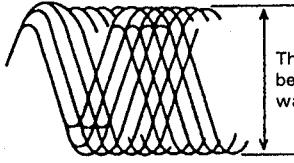

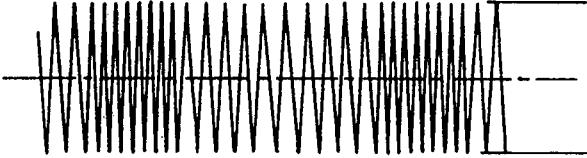

■ Test point

When TP10 and TP11 (5 V) are connected, the door open/close switch is canceled.

■ CD section

Item	Conditions	Adjustment and Confirmation	Standard Value	Adjusting
1.Feed motor offset adjustment	Measuring instruction Measurement jig Oscilloscope	1) Connect the measurement jig to both TP6 and TP7. 2) Connect TP5 and TP12 to Vref (TP2). 3) Adjust using VR581 so that DC power is 0 V.	0V ± 20mV	VR581

Item	Conditions	Adjustment and Confirmation	Standard Value	Adjusting
2. jitter check	Measuring instruction Jitter meter	1. with the jitter meter connected between TP1 and TP2, playback the test disc (TRACK 1) to confirm that the meter reads 25 n-sec or less.	25 n-sec or less	
3. RF level (eye-pattern) check	Measuring instruction Oscilloscope	1. Connect the oscilloscope between TP1 and TP2 to confirm that peak-to-peak value of eye-pattern waveform is within $1.2 \pm 0.3V$	$1.2 \pm 0.3V$	
		Eye pattern waveform  This amplitude should be maximum and the waveform clear.		
4. Tracking offset adjustment	Measuring instruction Oscilloscope	<p>Adjustment procedure</p> <p>1. Connect the oscilloscope between TP2 and TP3 .</p> <p>2. Play back the disc.</p> <p>3. Short circuit TP2 and TP4.</p> <p>4. Adjust VR501 so that the DC level of the tracking error signal (oscilloscope waveform) becomes zero. when the tracking offset meter is used for measurement, it should read "0" (zero).</p> <p>Note : Adjust VR501 so that the waveform is vertically symmetric about the zero level. use a direct coupling oscilloscope input.</p>	zero level	VR501
		Tracking offset waveform  Set the P-P center of the DC level to zero.		
5. Outermost circumference		1. Directly access the outer circumference track 31, check that play is performed normally and that abnormalities including sound jumping do NOT occur.		
6. Outer to inner circumference		1. Skip from the outer circumference track 24 (also possible with other disc's outermost circumference) to track 1 and check the time till play starts. Normally it is less than 5 seconds.		

■ Tuner section

Item	Conditions	Adjustment and Confirmation	Standard Value	Adjusting
1. Clock frequency adjustment	Mesuring instructions F.counter	Ground TP8 to the microprocessor +5V (TP11) and adjust C616 so that the output frequency of TP9 is 524288 ± 4 Hz.	524288 ± 4 Hz.	C616
2. Separation adjustment	Mesuring instructions FM SSG	1. SSG: 97.9 MHz, 66 dB (Stereo reference modulation) 2. First, turn VR11 clockwise from the bottom side. 3. Next, adjust VR31 when in radio reception mode so that the L channel output becomes minimum.	clockwise position minimum level	VR11 VR31
3. Blend adjustment	Mesuring instructions FM SSG	1. SSG: 97.9 MHz, 52 dB (Stereo reference modulation) 2. In radio reception mode, adjust VR11 so that the channel separation is 20 dB.	20dB	VR11
4. Usable sensitivity	Mesuring instructions FM SSG	1. With 97.9 MHz 20 dB reception, the output difference between MOD ON/OFF should be more than 30 dB. 2. With 1000 kHz 36 dB reception, the output difference between MOD ON/OFF should be more than 20 dB.	more than 30 dB. more than 20 dB.	
5. Signal to Noise ratio/Inter-station muting	Mesuring instructions FM SSG	1. With FM reference input reception, the output difference between MOD ON/OFF should be more than 52 dB. 2. When SSG output is changed from 66 dB to -19 dB, the output difference should be more than 10 dB. 3. With AM reference input reception, the output difference between MOD ON/OFF should be more than 46 dB.	more than 52 dB.	
6. Stereo separation / blend	Mesuring instructions FM SSG STEREO modulator	1. When the reference input of stereo reference modulation is received, the separation should be more than 24 dB. 2. Separation 20 dB input should be in the range of 49 to 55 dB. 3. When the MODE and MO buttons are pressed, check that a monaural broadcast is heard. Also check that the MONO and MO indicators light in the LCD display. 4. When the MODE and MO buttons are pressed again, check that a stereo broadcast is heard. Also check that the STEREO and ST indicators light in the LCD display.	more than 24 dB.	

Item	Conditions	Adjustment and Confirmation	Standard Value	Adjusting
7. Seek	Mesuring instructions FM SSG AM SSG	1. AM 1000 kHz 26 to 38 dB, FM 97.9 MHz 24 to 38 dB. 2. When the UP or DOWN button is pressed, seek tuning starts in the corresponding direction and stops in the above specified range. Seek tuning should NOT stop at a signal weaker than specified above.		
8. Preset/ Preset scan		1. Select a required broadcast station and keep pressing the required preset button (1 - 6). 2. Presetting is complete when the preset number button blinks and "MEMO" is displayed. 3. When the MODE and PS buttons are pressed, scan tuning of the preset frequency should be performed.		
9. SSM (Strong Station Memory)		1. Press the UP and DOWN buttons simultaneously for more than 3 seconds to check that "-SSM-" is displayed. 2. When the frequency is displayed again, check that the strong stations are stored to the preset memory.		
10. CD/Tuner level difference	Mesuring instructions Test disc FM SSG AM SSG	1. With reference to the input of standard disc track 1, check the REF input reception level of each band. FM: -20 dB dB AM: -20 dB dB		
11. Band/ F.Step		1. Each time the BAND button is pressed, the BAND should change from FM1, FM2, FM3 to AM. 2. The frequency changes in one step increments when using the UP and DOWN buttons. FM: 0.2 MHz step AM: 10 kHz step		
12. Output level check for power amp.	Input: Line-in terminal Output: Speaker terminal	1. When 1 kHz 1.5 V is applied to the line-in terminal, the speaker output level should be 9 V (20 W) or over. Moreover, confirm that the current consumed at this time is 8 A low less.	more than 9 V (20 W)	

4 Explanation of mechanism control

■ Trouble shoot of mechanism

1. Error display

- ERROR4**.....Feed motor error
- ERROR11**....Up/down motor error
- ERROR12**....Door open/close error
- ERROR13**....Magazine close error
- ERROR14**....Magazine open error and other open/close motor errors
- ERROR15**....Pickup return error
- ERROR16**....Pickup return error and other round motor errors

2. Function and direction operation of each motor

(1) Function

Up/down motor.

Loading/eject and subchassis up and down

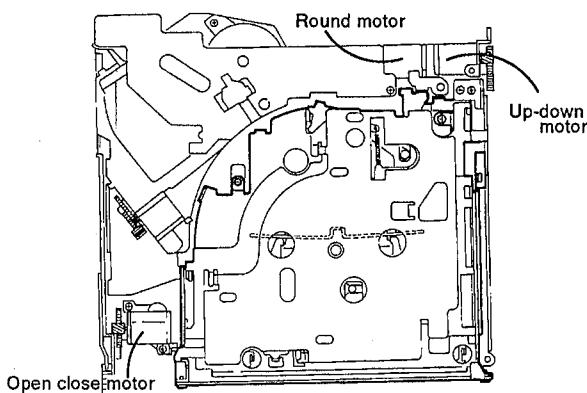

Round motor Pickup movement, disc holder control and floating control.

Open/close motor

Door open/close and magazine open/close

(2) Direction of motor operation

	Clockwise operation	Counterclockwise operation
UP Down motor	Loauding	Eject
Round motor	Moving pickup	Returning pickup
Open-Close motor	Door close and magazine open	Door open and magazine close

3. Recovering and repair procedure

Switch the power OFF and ON again, then set the mechanism to Maintenance mode. When recovery is NOT completed after resetting, select the correct procedure while referring to the ERROR display:

1) ERROR4

This indicates a feed string error. It is required to check the feed motor and the actuator section.

2) ERROR11

This indicates an up/down motor string error. It is required to check the up/down drive gear section.

When the mechanical lock is performed, even when the up/down motor can be rotated back and forth, perform the following recovery operation since there is a possibility of a magazine assembly defect or a disc slipping out of the magazine:

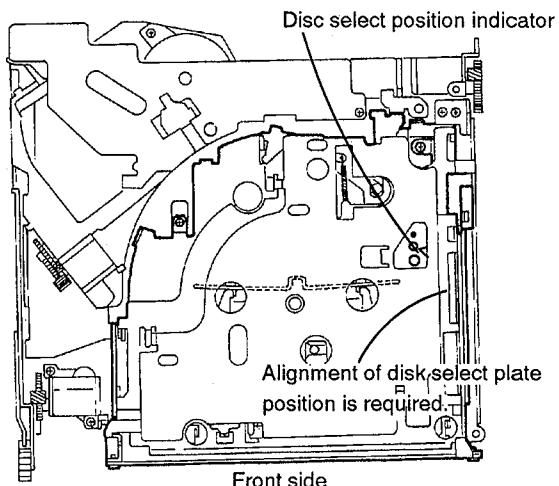

(1) Rotate the up/down motor back and forth, as long as the mechanical lock is NOT performed, and move the disk select plate to the center display position on the magazine holder.

(2) Turn the open/close motor clockwise once, to set the OPEN status, then confirm the abnormality of the disc slip-out.

When this occurs, unload the disc.

(3) With the above method, if recovery is NOT complete, remove the front plate and unload each tray one by one.

Note: When the magazine holder is closed, it is necessary to align the upper/lower disc select plates.

3) ERROR12

This indicates an error during door open/close. Confirm the damage of the SW attached to the front panel and the door openermechanism.

4) ERROR13

This indicates a disc slip- out or a pickup movement defect. (A magazine holder close defect can also considered.) When a disc slips out, confirm the cause by removing the disc in the same way as in procedure "2) ERROR11". When the pickup movement is defective, check if the pickup returns to its stopper position.

5) ERROR14

The cause of this error is largely because the magazine will NOT open. It is most probably generated from a wrongly- positioned disc select plate. Move the disc select plate to the center display position in the same way as in procedure "2) ERROR11", then try magazine open/close operation again. Following this, it is required to check the up/down drive gear.

6) ERROR15 / ERROR16

This indicates a round motor error. Check if the pickup movement, disc hold control and floating control are operating correctly.

Since ERROR15 may be generated due to an non-chucking defect, check the magazine and magazine holder unit, etc.

* Recovery and repairs have been based on typical defects.

■ Mechanism Control Specifications

1. Microprocessor timer setting during mode change

Set the microprocessor timer when each mode change is performed, in order to detect any abnormal operation of the mechanism.

Refer to the separate chart for each mode's actual timer setting value.

When processing has NOT finished within the timer setting, perform ERROR processing.

2. During tuner mode.

ACC - OFF (PS1 = L) or detachable panel removal, based on eject, magazine - closure and floating - lock positions in standby mode position.

During play, standby mode position should be in the floating - lockposition. When the mechanism moves up and down during a discchange, the standby position should be set to the end of theoperation, or when the mechanism is in play mode or the magazineis opening/closing, the position should be set to the magazine - close or floating - lock position.

Set to the magazine - close or eject position duringloading/ejecting.

When selecting the tuner, the PLAY key code should be transmitted to the standby position.

When Power Save 2 is switched OFF, processing should be interrupted, and when switched ON, processing should be resumed.

3. Door open/close processing (magazine loading /unloading)

When magazine loading is performed by changing the Loading Start End SW (SW1) from L to H, the specified disc (normally Disc 1) is played. However, when Standby mode is engaged, the pickup movement stops just before play starts.

When loading is performed by switching the Door Open SW from OFF to ON, the lifter base is moved to the specified disc position (normally Disc 1) and stops just before pickup movement starts.

When the magazine is NOT loaded, the lifter base moves to the Disk 3 position and stops operation without

the pickup moving.

Eject operation is performed when the Eject key is pressed.

When moving from door OPEN to door CLOSE rotating the O/C motor

When the door open/close operation has finished, if the Door Close SW (or Door Open SW) is NOT switched ON, stop the motor till the SW turns ON, then proceed to the next operation.

4. Error display

The following are mechanism errors that may occur:

ERROR4.....Feed motor error

ERROR11.....up/down motor error

ERROR12.....door open/close error

ERROR13.....magazine close error

ERROR14.....Magazine open error and other open/close motor errors.

ERROR15.....pickup return error

ERROR16.....Pickup return error and other round motor error

5. Mechanism running (operation) and moving to the maintenance position

When the ACC Is ON and the Eject key is pressed during resetting,perform mechanism running (operation) after the initial setting ofthe mechanism position.

When the unit is reset as usual, the mechanism position is initially set and the running operation ends. (However, when the power is switched ON using the Power key, normal operation is performed.)

Mechanism running mode is repeated as follows; magazine loading → Disc 1 play → Disc 2 play → Disc 3 play → Disc 2 play → Disc 1 play → Disk 3 play → magazine eject. The play time of each disc is 10 seconds and when no magazine is detected, mechanism running mode is released.

Regarding the maintenance position, with the main PWB, it is in the mechanism assembly position (the mechanism detection switch and mechanism lever are in the release position).

6. Processing during play

Refer to the CD microprocessor control specifications (Nov. 19th, 1991) for TOC reading and play processing.

However, on page 32

when an abnormality occurs up to three* times during focus search, it is regarded as an ERROR. After focusing, when a CLV servo or TOC reading error is generated, perform focus search again and if the abnormality occurs twice*, "NO DISC" is considered.

* (The number of times can vary after the trial setting.)

■ Pin function of system control IC, (IC601)UPD78044GF

PIN No.	Name of Signal	I/O of micon.	I/O of unit	Initialize after reset	Active mode	Pin function

74	LCD 1 CS	O	O	O(L)	H	Driver control chip select for LCD1
75	RELAY	O	O	O(L)	H	Power relay control signal output
76	MUTE	O	O	O(L)	L	Audio mute control signal output
77	CD REMOTE	O	O	O(L)	H	CD remote output pin. (SWCT2) *1
78	HYPER BUS	O	O	O(L)	H	Active Hyper- Bass control (SWCT3) *1
79	CD ON	O	O	O(L)	H	CD LSI ON
80	O - C MOTOR 1	O	O	O(L)		Open/Close motor control signal 1

■ Pin function of tuner control IC, (IC701)UPD17003AGF

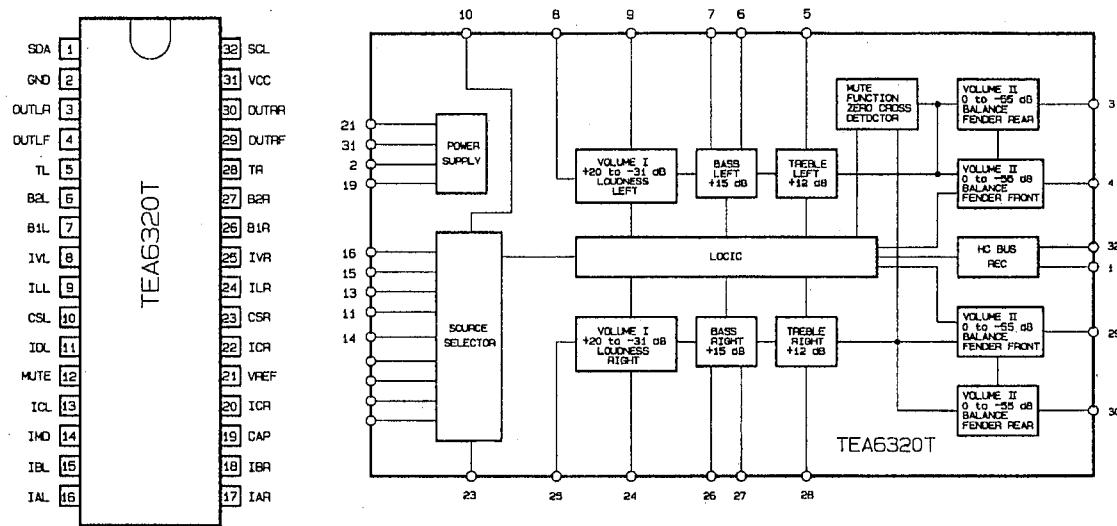

Pin No.	Name of Signal	I/O of micon.	Active mode	Pin function
1	AGC	O	L	AGC output - L during auto seek
2	MUTE	O	L	Mute output - L during muting
3		I/O		
4		I/O		
5	J - BUS SCK	I/O	H	J BUS clock input and output
6	J - BUS SCK	O	H	J BUS data output
7	J - BUS SI	II/o	H	J BUS data input
8		O		
9		O		
10		I		
11	J - BUS INT	I	H	J BUS interruption input pin
12		I		
13	CE	I	H	Microprocessor chip enable input pin. Microprocessor operates normally at H.
14	J - BUS I/O SEL	O	H	J BUS input and output select output
15	DK IN	I	L	DK input - L when DK is ON
16	SK IN	I	L	SK input - L when SK is ON
17	ST IN	I	L	ST input (both FM and AM) - L when ST is detected
18		O		
19	TU OUT	O	H	Tuner output - H when outputting tuner sound
20	DK OUT	O	H	DK output - H during DK interrupt operation
21	WT	O	H	900 Hz, duty cycle of 50%. 0.5 second ON and 0.5 second OFF. Warning tone output 900 Hz
22	WTL	O	H	H during warning tone output
23	MONO OUT	O	H	Mono output - L when mono is forcibly output
24	BAND 1 OUT	O	H	Band 1 - FM/AM band select output
25	BAND2 OUT	O	H	Band 2 - LW/SDK band select output
26	FM IF COUNT IN	I	H	FM IF count input
27	AM IF COUNT IN	I	H	AM IF count input
28	SM IN	I	H	S strength meter signal input
29	SD IN	I	H	Station detector input
30	Vdd1	I		Power supply pin
31	AM OSC IN	I	H	AM local oscillator input
32	FM OSC IN	I	H	FM local oscillator input
33	GND			GND
34	Xtal OUT	O		Crystal pin
35	Xtal IN	I		Crystal pin
36	Error out 0	O		PLL ERROR out 1
37	Error out 1	O		PLL ERROR out 2
38	LPF INPUT	I		LPF input pin for built-in PLL
39	LPF OUTPUT	I		LPF output pin for built-in PLL
40	LPF Vdd	I		LPF power supply
41	Vdd2			Power supply pin
42~72				Not used
73	KEY OUTPUT	O		
74	KEY OUTPUT	O		
75	KEY INPUT	I		Initial setting input
76	KEY INPUT	I		Initial setting input
77	KEY INPUT	I		Initial setting input
78	KEY INPUT	I		Initial setting input
79	DYNAS	O		Dynas output
80	LOCAL SCAN	O		Local scan output

NOTES

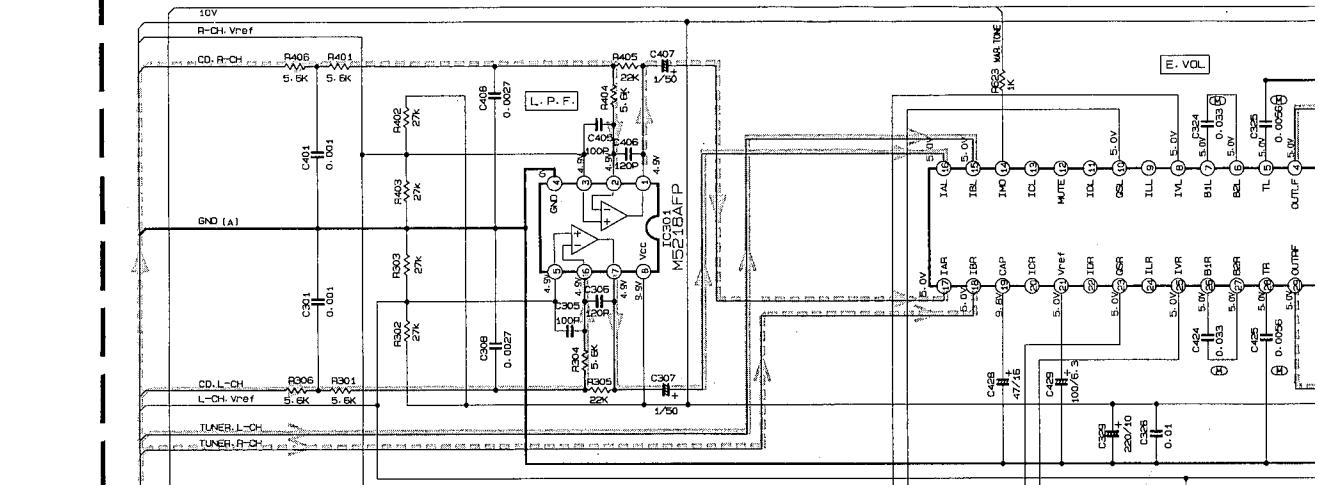

- VOLTAGES ARE DC-MEASURED WITH A DIGITAL VOLT METER WITHOUT INPUT SIGNAL. CONDITION — CO MODE.
- UNLESS OTHERWISE SPECIFIED:
ALL RESISTORS ARE 1/10W 45% METAL GLAZE RESISTOR.
ALL CAPACITORS ARE 50V 0.025UF CERAMIC CAPACITOR.
ALL INDUCTORS ARE 100MH 1.5A 45% DIL-16.
ALL CAPACITANCE VALUES ARE IN μF (PF).
ALL E-CAPACITORS ARE SHOWN IN THE FORM OF CAPACITANCE (μF) / RATED VOLTAGE (V).
— 50V 0.05UF NYLAR CAPACITOR OR 50V 45% THIN FILM CAPACITOR.

NOTES

- 1. VOLTAGES ARE DC-MEASURED WITH A DIGITAL VOLT METER WITHOUT INPUT SIGNAL.
- CONDITION --- CD MODE
- 2. UNLESS OTHERWISE SPECIFIED:
 - ALL RESISTORS ARE 1/4W $\pm 5\%$ METAL GLAZE RESISTOR.
 - ALL CAPACITORS ARE 50V OR 25V CERAMIC CAPACITOR.
 - ALL RESISTANCE VALUES ARE IN OHM Ω .
 - ALL CAPACITANCE VALUES ARE IN PF (PF).
 - ALL ELETROLYTIC CAPACITORS ARE IN THE FORM OF (UF) μ F RATED VOLTAGE (V).
 - ④ --- 50V $\pm 5\%$ WAXAR CAPACITOR OR 50V $\pm 5\%$ DYNACAP M.CAPACITOR.

10 Exploded view of hideawy amp. and removal procedure

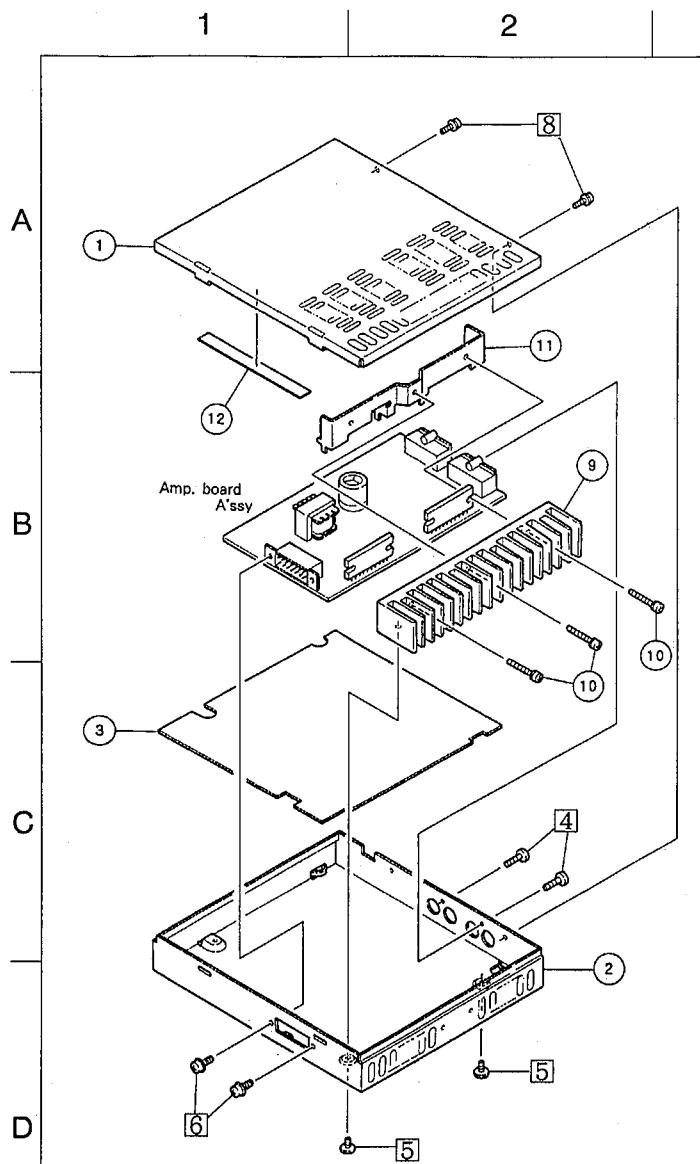

Fig. 10 - 1

■ Removal of main parts

◆ Top cover

(refer to white numerals in black circles.)

1. Remove two screws ⑧ retaining the top cover.
2. Slightly open the part which is secured by the screws and move the top cover rearward to take off.

◆ Amplifier board assembly

1. Remove two screws ⑥ retaining the controller connector .
2. Remove tow screws ④ retaining the RCA jack.
3. Remove two screws ⑤ retaining the heat sink from the bottom side.
