1. Main Features

- Detachable Control Panel
- AM/FM Stereo PLL Synthesizer Tuner
- 20 – Station Preset Tuning (FM – 15, AM – 5)
- Preset Scan/Scan/Seek/Manual Tuning
- U – Turn Auto – Reverse Mechanism
- Dolby B Noise Reduction
- 4 – Channel Amplifier System
- Maximum Power Output of 8 watts per channel (Front)/25 watts per channel (Rear)
- Active Hyper – Bass Sound

- Fader Control
- Digital Clock Display
- Mono Button
- Line Output Terminal

*Dolby Noise Reduction manufactured under license from Dolby Laboratories Licensing Corporation. "Dolby" and the double – D symbol  are trademarks of Dolby Laboratories Licensing Corporation.

2. Specifications

AUDIO AMPLIFIER SECTION

Maximum Power Output: (Front) 8 W per channel
(Rear) 25 W per channel
Continuous Power Output (RMS): (Front) 3 W per channel into 4 Ω , 40 to 20,000 Hz at no more than 0.8% total harmonic distortion. (Rear) 12 W per channel into 4 Ω , 40 to 20,000 Hz at no more than 0.8% total harmonic distortion.
Load Impedance: 4 Ω (4 to 8 Ω allowance)
Tone Control Range
Bass: ± 10 dB at 100 Hz
Treble: ± 10 dB at 10 kHz
Frequency Response: 40 to 20,000 Hz
Signal-to-Noise Ratio: 70 dB
Line-Out Level/Impedance: 0.5 V/20 k Ω load (250 nWb/m)

RADIO SECTION

Frequency Range
FM: 87.5 to 107.9 MHz (C/J)
(with channel interval set to 200 kHz)
87.5 to 108.0 MHz (C/J)
(with channel interval set to 50 kHz)
87.5 to 108.0 MHz (A/U)
AM: 530 to 1,710 kHz (C/J)
(with channel interval set to 10 kHz)
522 to 1,620 kHz (C/J)
(with channel interval set to 9 kHz)
531 to 1,602 kHz (A/U)

[FM Tuner]

Usable Sensitivity: 12.1 dBf (1.1 μ V/75 Ω)
50 dB Quieting Sensitivity: 16.3 dBf (1.8 μ V/75 Ω)
Alternate Channel Selectivity: (400 kHz): 65 dB
Frequency Response: 40 to 15,000 Hz
Stereo Separation: 35 dB
Capture Ratio: 2.0 dB

[AM Tuner]

Sensitivity: 20 μ V
Selectivity: 35 dB

CASSETTE DECK SECTION

Wow & Flutter: 0.11% (WRMS)
Fast-Wind Time: 100 sec. (C-60)
Frequency Response: 50 to 15,000 Hz (± 3 dB)
Signal-to-Noise Ratio (Dolby NR-ON): 60 dB
(Dolby NR-OFF): 52 dB
Stereo Separation: 40 dB

GENERAL

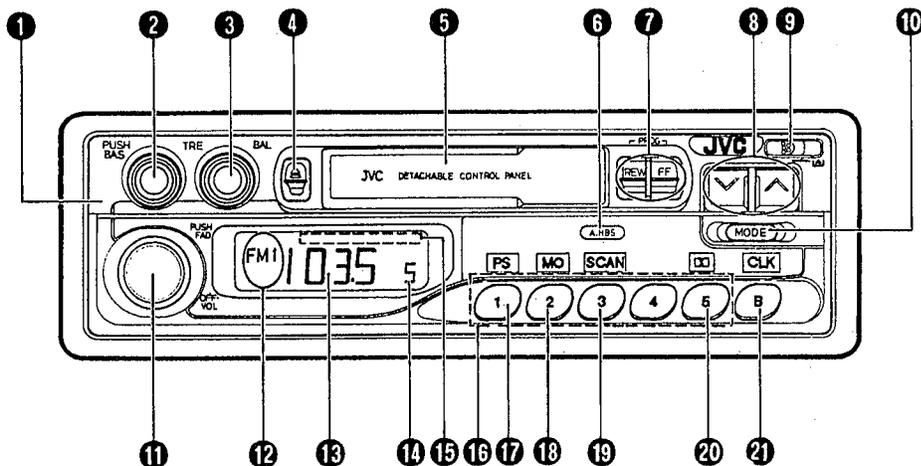

Power Requirement
Operating Voltage: DC 14.4 volts (11 to 16 volts allowance)
Grounding System: Negative ground
Dimensions (W x H x D) Installation Size: 178 x 50 x 151 mm (7-1/16" x 2" x 6")
Panel Size: 190 x 58 x 18 mm (7-1/2" x 2-5/16" x 3/4")
Gross Weight: 1.8 kg (4.0 lbs)

Design and specifications subject to change without notice.

If a kit is necessary for your car, consult your telephone directory for the nearest car audio speciality shop.

3. Instructions (Extract)

LOCATION OF CONTROLS

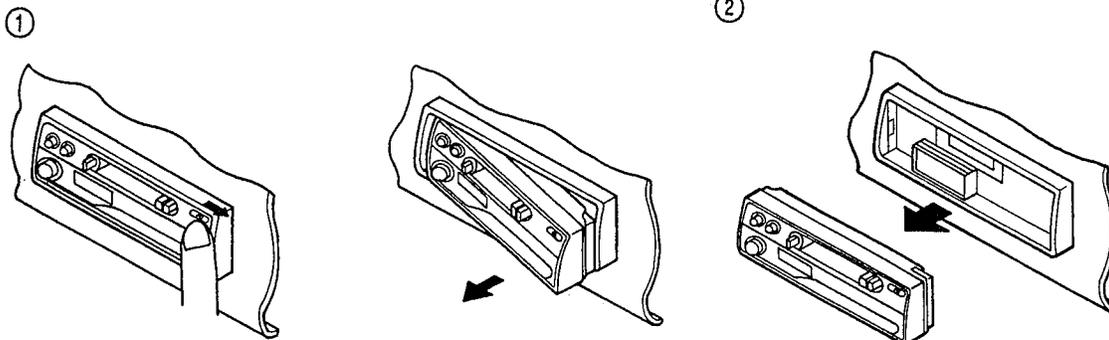

- | | |
|---|---|
| <ul style="list-style-type: none"> ① Control panel ② Treble (TRE)/Push bass (PUSH BAS) Control ③ Balance (BAL) Control ④ Eject (▲) button ⑤ Cassette loading slot ⑥ Active Hyper-Bass Sound (A.HBS) button ⑦ Program (PROG)/REW, FF buttons ⑧ Tuning/Hour/Minute Adjustment
Down (∇) frequency/Hour adjustment
Up (▲) frequency/Minute adjustment | <ul style="list-style-type: none"> ⑨ Control Panel Release (▲) switch ⑩ MODE button ⑪ Power ON-OFF/Volume (VOL)/Push fader (PUSH FAD) controls ⑫ Band indicator (AM-FM1-FM2-FM3) ⑬ Radio Frequency/Time display
TAPE mode display ⑭ Preset Station display ⑮ Indicators
Dolby B (□□) NR
Mono (MO)
ST (FM stereo)
Tape direction (◀▶) ⑯ Preset Station buttons (No.1 to No.5) ⑰ Dolby B NR (□□) button ⑱ Band (B) button |
|---|---|

Active Hyper-Bass Sound Button

Press the A.HBS button to listen to hyper-bass sound. (The A.HBS button lights red.)

How To Detach The Control Panel.

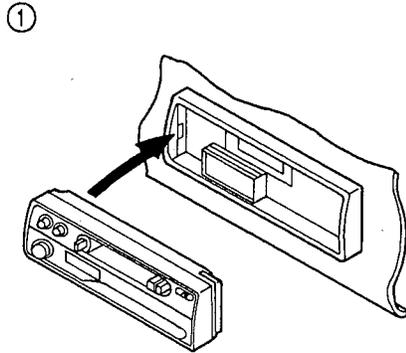

- ① Slide the Control Panel Release (▲) switch in the direction of the arrow to detach the control panel.
- ② Pull the control panel out of the main unit, as shown below.
 - Put the control panel in the provided case for protection.

- Press the following buttons after the MODE button has been pressed and its red indicator is lit. Five seconds after completing the operation, the MODE button's red indicator goes out.
- ⑰ Preset Scan (PS) button
- ⑱ MONO (MO) button
- ⑲ Scan (SCAN) button
- ⑳ Clock (CLK) button

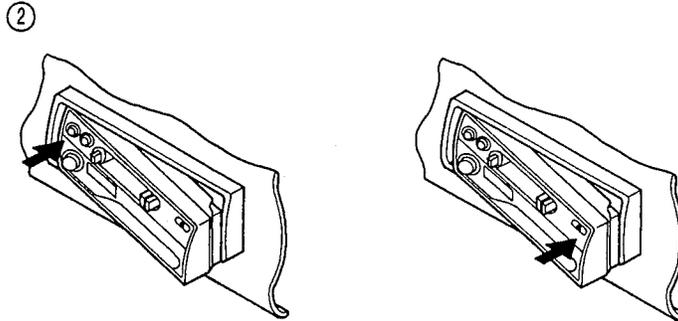

How To Attach The Control Panel

- ① Align the left side of the control panel with the left side of the holder.
- ② Press the left side of the control panel first, then the right side to set it correctly.

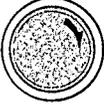

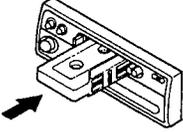

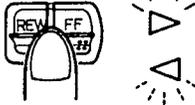

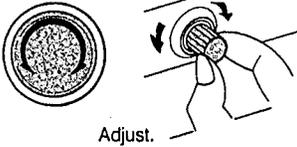

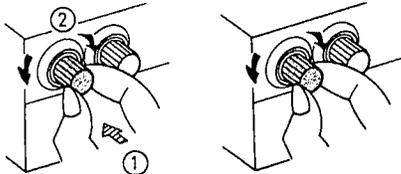

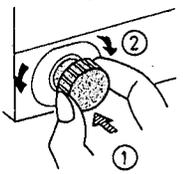

Note:

- Be careful not to damage the connector terminals when attaching/detaching the control panel or while the control panel is removed.

TAPE OPERATION

Operate in the order shown.

<p>1 OFF - VOL</p>  <p>Switch on.</p>	<p>2</p>  <p>Insert a cassette.</p>	<p>3</p>  <p>5</p>  <p>(See page 16.)</p>	
<p>4 PROG</p>  <p>Select program.</p>		<p>5 VOL BAL</p>  <p>Adjust.</p>	
<p>6 PUSH BAS TRE</p>  <p>Adjust.</p>		<p>7 PUSH FAD</p>  <p>Adjust.</p>	

• DOLBY B NR button

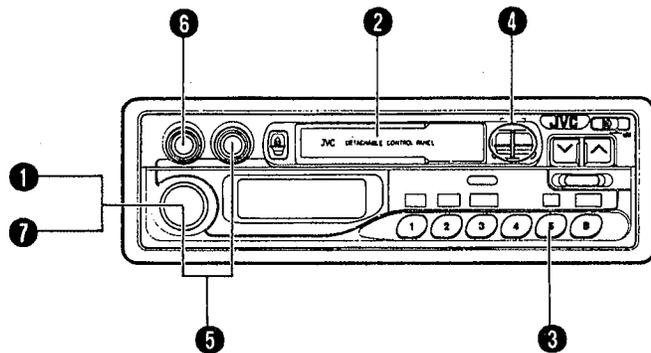

- Set the Dolby B NR (□□) button as required.
- ON — (□□) indicator lights.
- OFF — (□□) indicator goes out.

How To Fast-Forward And Rewind Tapes

Press the FF button to fast-forward the side being played; when the tape end is detected, the tape is reversed and playback starts from the beginning of the other side. Press the REW button to rewind the tape to its beginning, where playback restarts. Lightly press the PROG button to start playback from the current position during fast-forward or rewind.

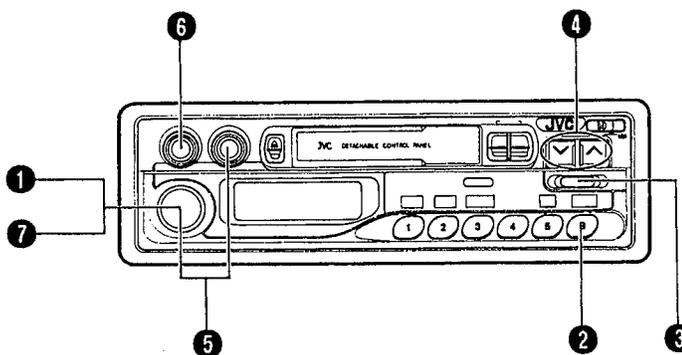

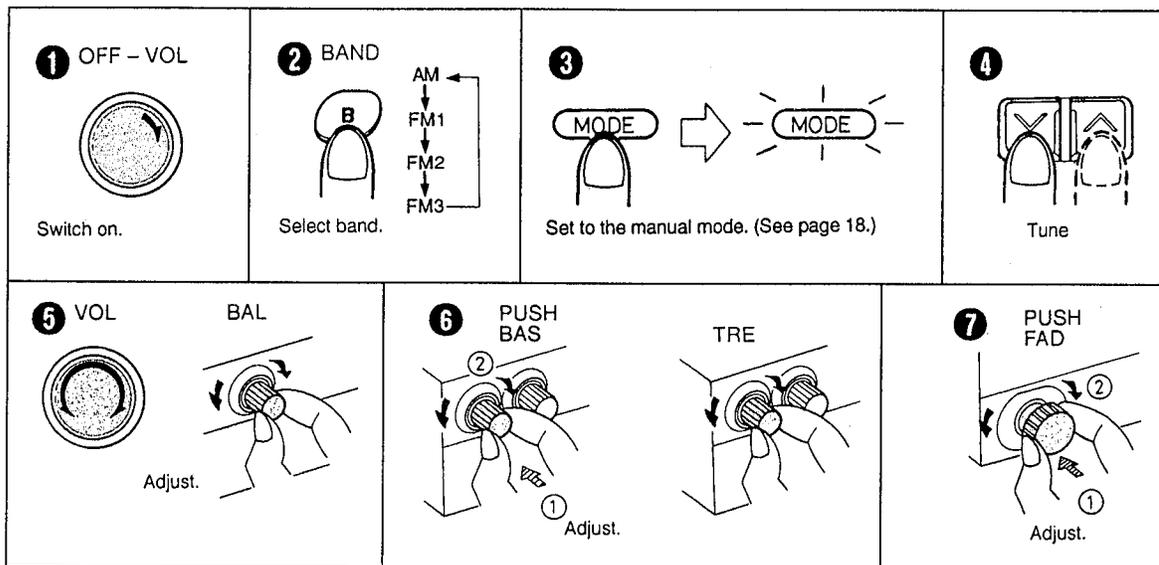

Auto-Reverse Mechanism

When the tape reaches its end, this mechanism automatically switches over to play back the other side. To listen to the other side of the tape during playback, press the PROG button. The change in direction can be checked in the Tape Direction indicator.

RADIO OPERATION

Operate in the order shown.

Manual Tuning

Set Manual mode using the MODE button. When the MODE button's light is red, the unit is in Manual mode. Then, by pressing the Tuning button, you can move up/down the frequency band. The band is scanned as long as either side of the button is pressed.

Frequency scan steps are as follows:
 FM – in 200 kHz/50 kHz units (C/J version)
 FM – in 100 kHz units (A/U version)
 AM – in 10 kHz/9 kHz units (C/J version)
 AM – in 9 kHz units (A/U version)

- When approx. 5 seconds have elapsed after completing manual tuning, the unit switches back to Seek mode and the MODE button's red indicator goes out.

Seek Tuning

The unit is in Seek mode when the MODE button's red indicator goes out. Then, by pressing the or button the unit tunes to the adjacent station with a higher or lower frequency.

Press to move to lower frequencies.

Press to move to higher frequencies.

Scan Button Tuning

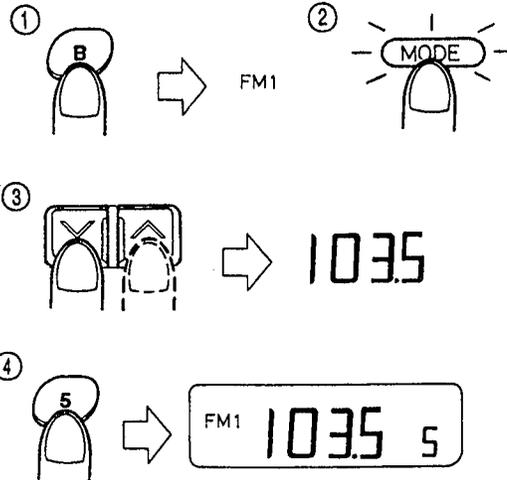

Use the SCAN button for automatic scanning of the FM and AM frequency bands. Press this button after the MODE button has been pressed and the MODE button's indicator is lit, then each station is monitored for approx. 5 seconds (the frequency blinks during this time). After 5 seconds have elapsed, the frequency advances to the next station which in turn is monitored for 5 seconds. To stop scanning, press the SCAN button again.

Preset Button Tuning

5 stations in each band (FM1, FM2, FM3 and AM) can be preset as follows:

● **Example (when presetting Preset Station button "5" to an FM station at 103.5 MHz)**

- ① Select the FM1 band using the Band (B) button.
- ② Set Manual mode.
- ③ Tune to the desired station.
- ④ Press Preset Station button "5" for more than 2 seconds. (When "5" blinks in the Preset Station display, the station is preset.)

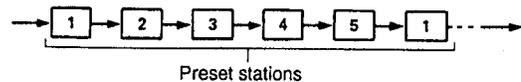

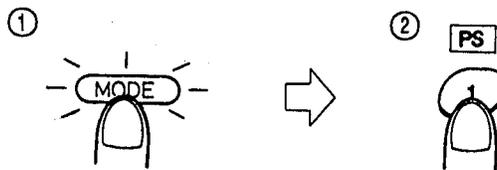

- Repeat the above procedure for the other 4 Preset Station buttons and other bands (FM2, FM3 and AM).

Notes:

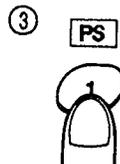

- A previously preset station is erased when a new station is stored in memory.
- The preset stations are erased when the power supply to the memory circuit is interrupted during battery replacement, etc. When this occurs, preset the stations again.

Preset Scan Button Tuning

This function makes it possible to automatically scan preset FM and AM stations.

- ① Press the MODE button (its red indicator lights).
- ② Press the PS button.
 - Scanning is performed in the order of the preset stations in each frequency band (FM1, FM2, FM3 and AM). Each preset station is heard for approx. 5 seconds.
- ③ When the required station is heard, press the PS button again.

Mono Button

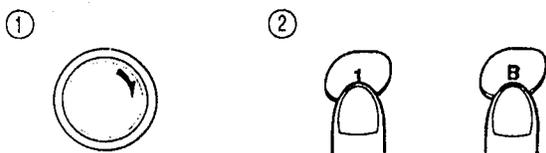

When listening to FM, set the MO button to STEREO or MONO after the MODE button has been pressed and its red indicator is lit.

Note:

Set to MONO when a stereo FM broadcast is too noisy and cannot be heard satisfactorily.

To Change The Intervals Between Channels (C/J version only)

When this unit is shipped, the channel intervals are set to 10 kHz for AM and 200 kHz for FM. If the unit is used in an area other than North or South America, switch as follows:

- ① Switch the power ON.
- ② While pressing Preset Station button 1, press the Band (B) button for more than 3 seconds.

Performing this procedure sets the channel intervals to 9 kHz for AM and 50 kHz for FM.

To switch back to the original intervals, repeat the above operation.

DIGITAL CLOCK DISPLAY

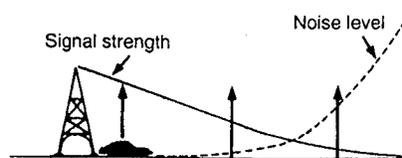

When the MODE button is pressed or a tape is loaded, the MODE button lights red. While lit, each time the CLK button is pressed, the time, tuner or tape information (when a tape is loaded) is displayed. When the tuner is operated in Time mode, the frequency is displayed, then, after a brief period will return to Time mode. When listening to a tape, "TAPE" or the current time is shown in the display.

How To Adjust The Time

Make sure the display is in Time mode with the MODE button lit in red. Then, while pressing the CLK button, press the Hour Adjustment button (∨) to adjust the "hours", and press the Minute Adjustment button (∧) to adjust the "minutes".

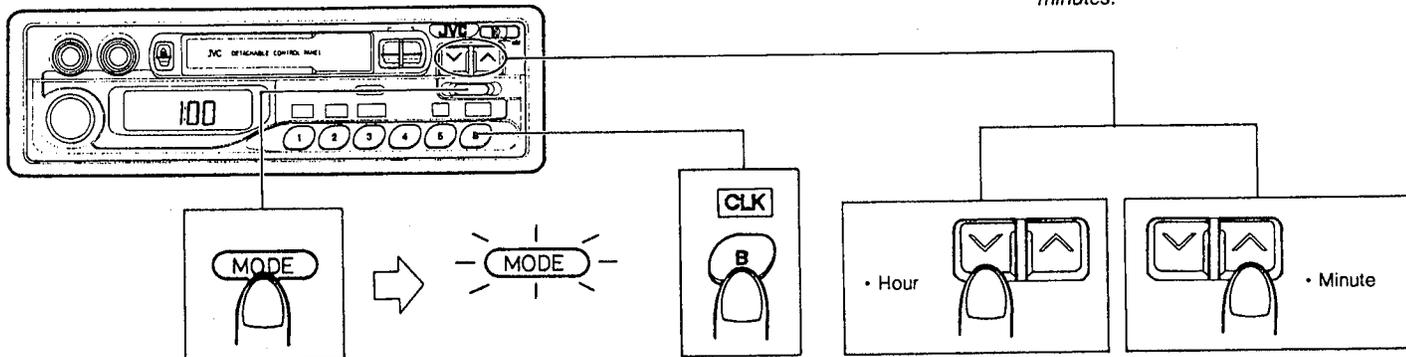

Automatic FM Noise Suppressor (AFNS)

This unit incorporates an automatic FM noise suppression circuit to ensure satisfactory reception of FM broadcasts when a vehicle is moving and signal strengths are continuously fluctuating.

	A	B	C
Signal strength	Strong	Not so strong	Weak
Auto blend	Stereo	Blend	Mono
Auto high-cut	-	➔	(Operates)

minutes.

INSTALLATION (IN-DASH MOUNTING)

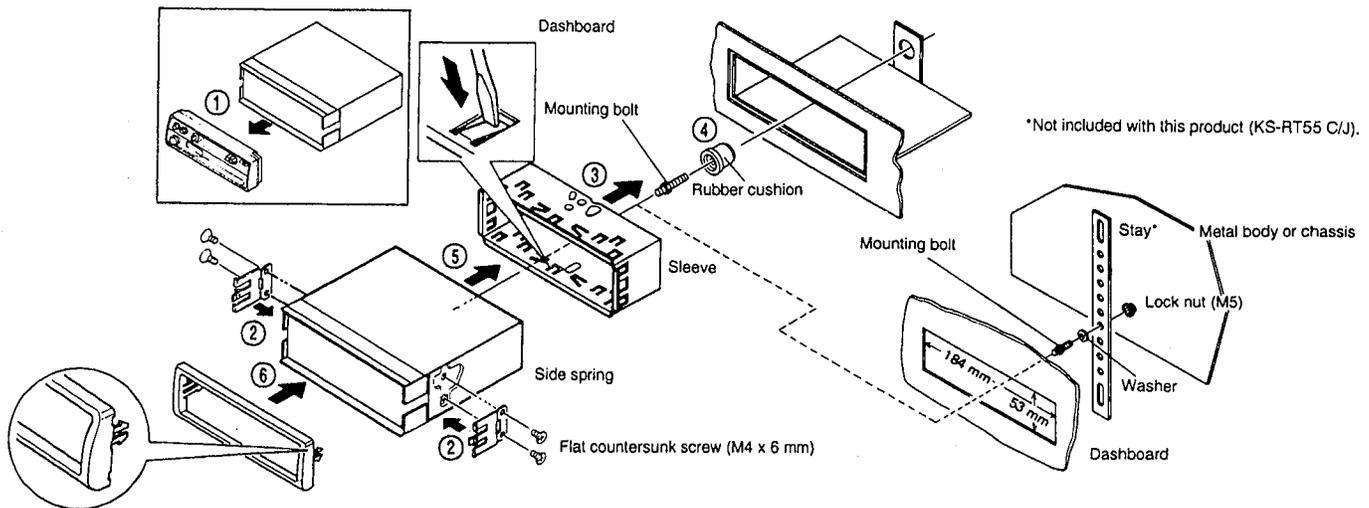

IMPORTANT

- Before using this unit for the first time, press the Eject button fully, to reset the mechanism.

- The following illustration shows a typical installation. However, you should make adjustments corresponding to your specific car. If you have any questions or require information regarding installation kits, consult your JVC car audio dealer or a company supplying kits.

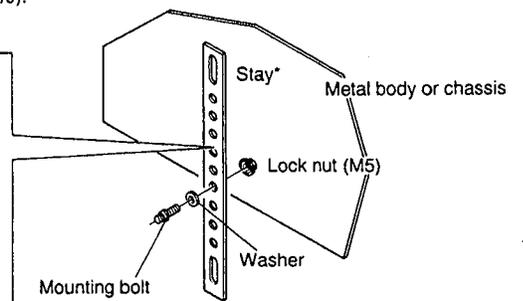

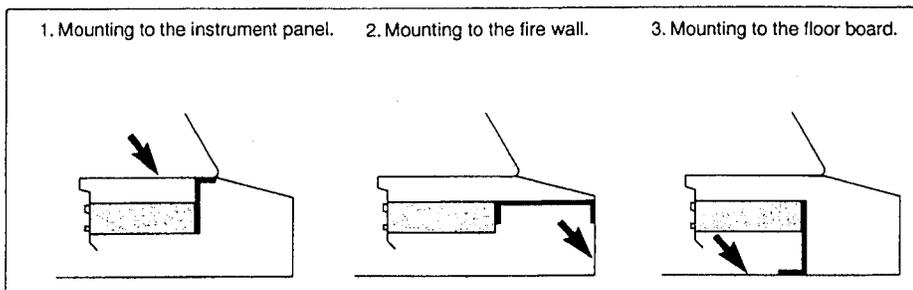

- Follow the numbers for mounting.

- 1 Slide the Control Panel Release (▲) switch to the right and remove the control panel.
- 2 Attach the 2 side springs.
- 3 Install the sleeve in the dashboard.
 - * After the sleeve is correctly installed in the dashboard, bend the appropriate tabs to hold the sleeve firmly in place, as shown.
- 4 Fix the mounting bolt to the rear of the unit's body and place the rubber cushion over the end of the bolt.
- 5 Slide the unit into the sleeve until they are locked together.
- 6 Attach the trim plate.

- Examples for use of the back stay:

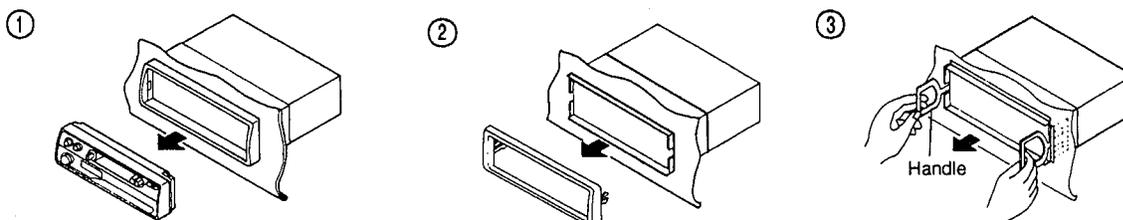

*Not included with this product (KS-RT55 C/J).

Removing the unit

- Before removing the unit, release the rear section.

- ① Remove the control panel.
- ② Remove the trim plate.
- ③ Insert the 2 handles between the side springs and the sleeve, as shown. Then, while gently pulling the handles away from each other, slide out the unit.

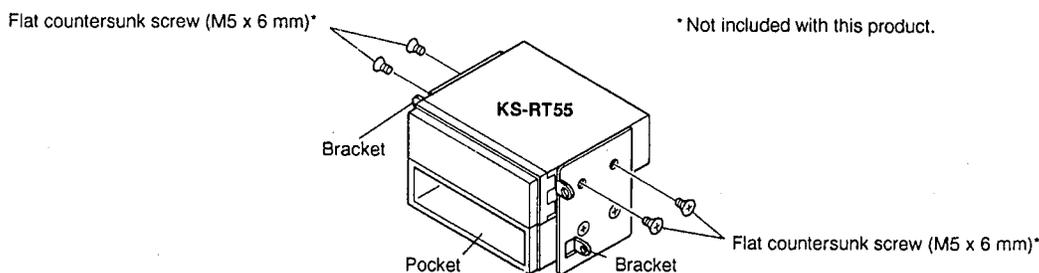

When installing the unit without using the sleeve.

In a Toyota for example, first remove the car radio and install the unit in its place.

Notes:

- When installing the unit on the mounting bracket, be sure to use the 6 mm-long screws. If longer screws are used, they could damage the unit.
- When the unit is installed on the mounting bracket, or the unit with the mounting bracket is installed to the car body, adjust the installation position so that the control panel can be attached/detached without difficulty.

ELECTRICAL CONNECTIONS

To prevent short circuits, we recommend that you disconnect the battery's negative terminal and make all electrical connections before installing the unit. If you are not sure how to install this unit correctly, have it installed by a qualified technician.

Note:

This unit is designed for a 12-volt DC negative ground. If your vehicle does not have this system, a voltage inverter is required, which can be purchased at JVC car audio dealers.

- Maximum input of the speakers should be more than 25 watts at the rear and 8 watts at the front, with an impedance of 4 to 8 ohms.

CAUTIONS:

As this unit uses BTL (Balanced Transformerless) amplifier circuitry (floating ground system), please comply with the following:

1. Do NOT connect the black-lined speaker leads to a common point.
2. Do NOT connect the speaker leads to the metal body or chassis.
3. Cover the terminals of the leads that are NOT used with insulating tape, to prevent them from shorting.

- Be sure to ground this unit to the car's chassis.

A. 4-Speaker Connections

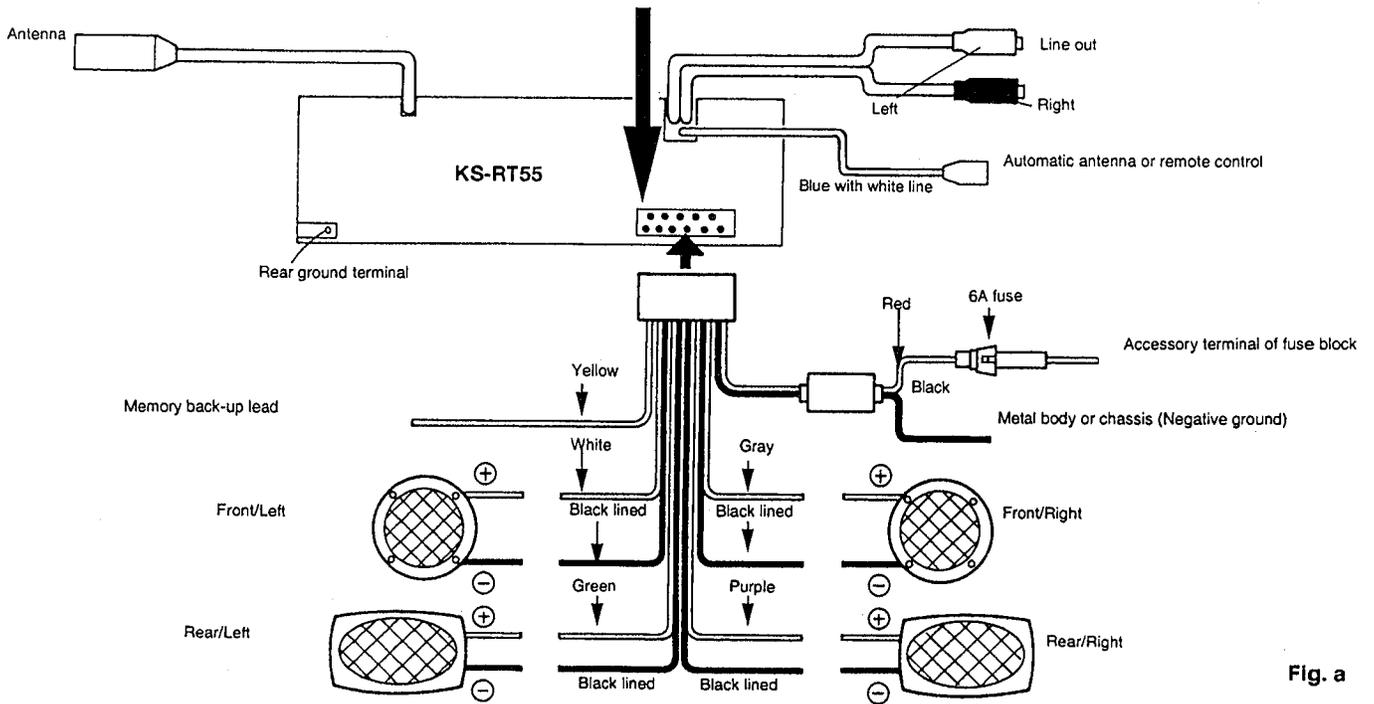

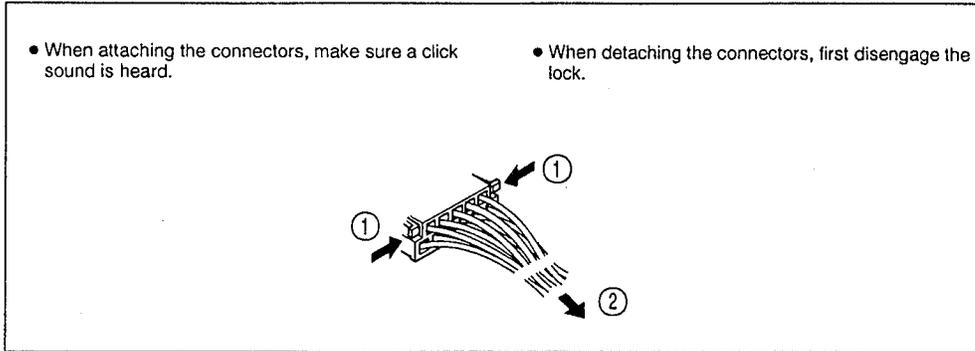

Fig. a

B. 4-Speaker connections when adding a power amplifier

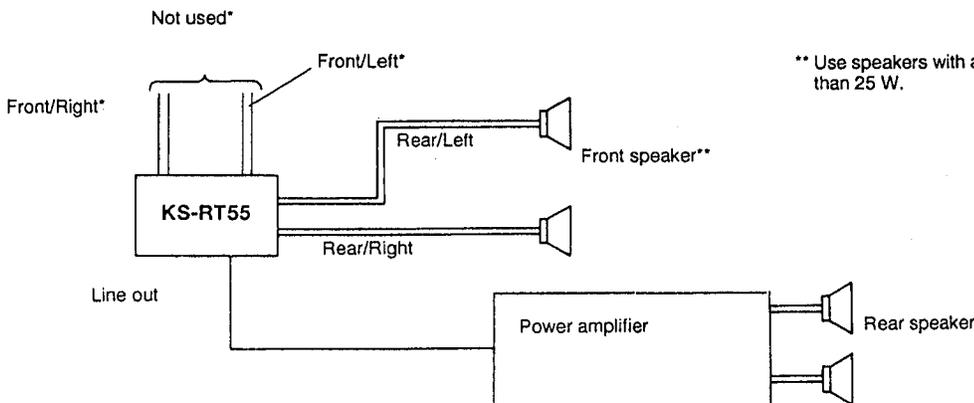

Fig. b

- When making 4-speaker connections using an external power amplifier, connect the front speakers to the rear speaker terminals (do not use the front speaker terminals); this enables use of the Fader control (see page 10).

C. Line Terminal Connections (Line Out)

Since this unit has line-out terminals, an amplifier and other equipment can be used to upgrade your car stereo system.

- With an amplifier, connect this unit's line-out terminals to the amplifier's line-in terminals.

D. Automatic Antenna Connections

To use the automatic antenna, connect its remote lead (blue with white lines) terminal. For details of installation, see the automatic antenna's Instruction Manual.

E. Memory Back-Up Lead

Connect this lead to a LIVE power source (supplied even when vehicle ignition is OFF).

F. Fader Control

- **When used in a 4-speaker system**
Use this control to balance the volume levels of the front and rear speakers.
Turn counterclockwise to decrease the volume level of the rear speakers, and clockwise to decrease that of the front speakers. The overall volume level can be adjusted with the volume knob.
- **4-Speaker connection system by adding a power amplifier**
Turn clockwise to decrease the volume level of the rear speakers (connected to external power amplifier), and counterclockwise to decrease that of the front speakers (connected directly to receiver).
- **When used in a 2-speaker system**
Set this control to the center position.

MAINTENANCE

• Cleaning The Head

After several hours of use, the playback sound may become muffled or wow and flutter may be noticeable. This is usually due to a deposit of oxide on the tape head, capstan and pinch roller. The easiest way to overcome this problem is to use a head-cleaning tape, which can be purchased from your JVC car audio dealer.

• Cleaning The Connector

If the control panel is frequently detached, a poor connection may occur with the control panel holder. To minimize this possibility, periodically wipe the connector with a cotton swab or cloth moistened with alcohol, being careful not to damage the connector terminals. Your unit requires very little attention, but you will be assured of top performance only if you follow the above notes.

Your unit requires very little attention, but you will be assured of top performance only if you follow the above notes.

TAPE CARE HINTS

It is very important to keep your tapes clean. Always return them to their storage boxes after playback.
Never store tapes in direct sunlight, high humidity or extremely hot temperatures.
Never play dirty or dusty tapes — they can damage the head.
Slack tape in a cassette can cause trouble by becoming entangled with the capstan or pinch roller.
This may also cause the auto-reverse mechanism to malfunction. Avoid this by tightening the tape, as shown.

Note:

Always remove cassettes from the loading slot when not listening to them, as the tape may become slack.

4. Location of Main Parts

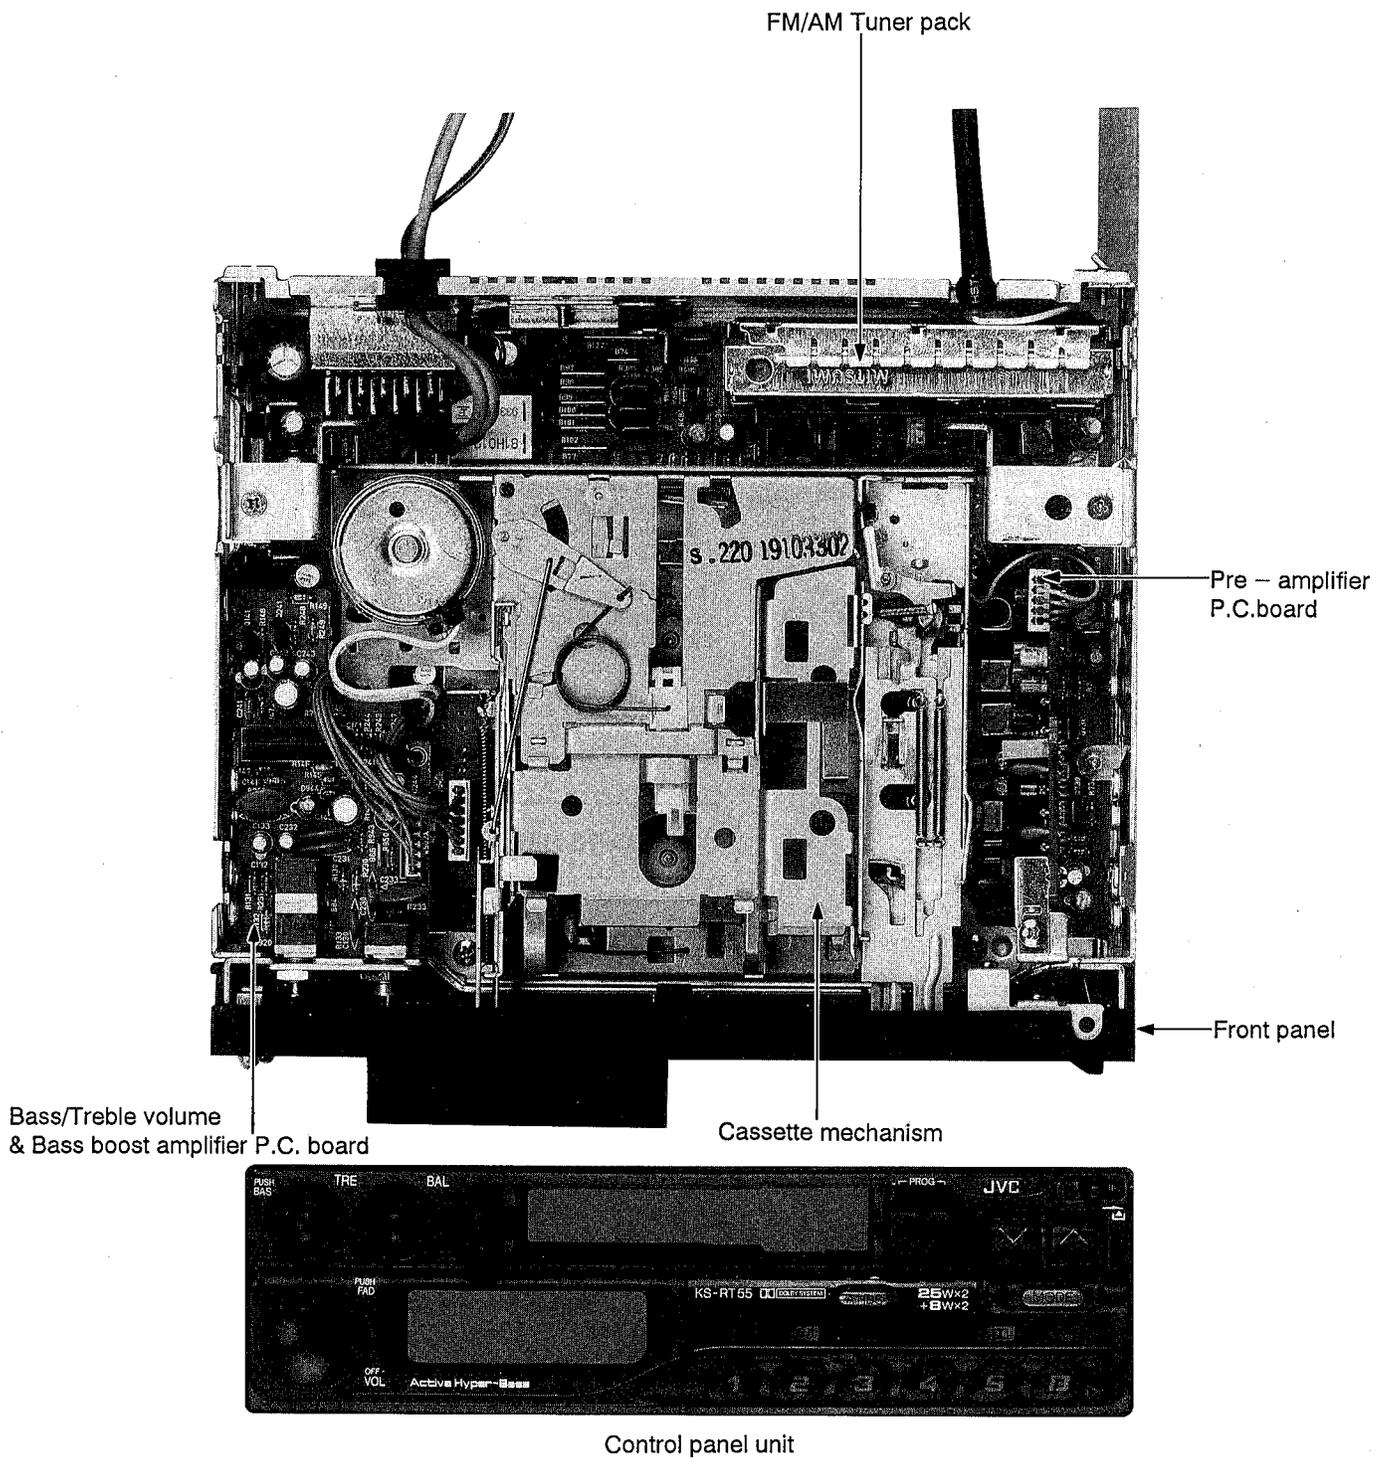

Fig. 4-1

5. Removal of Main Parts

■ Method of removing the top cover (Refer to Fig. 5-1)

1. From the back of the body, remove the two screws (1) retaining the top cover.
2. Insert a minus screw driver into the clearance between the body and top cover and disengage the two engagements (A and B) retaining the top cover.

■ Method of removing the bottom cover (Refer to Fig. 5-1)

1. From the back of the body, remove the one screw (2) retaining the bottom cover similarly according to the top cover removing method.
2. Insert a minus screw driver into the clearance between the body and bottom cover and disengage the two engagements (C and D) retaining bottom top cover.

■ Method of removing the front panel (Refer to Figs. 5-2 and 5-3)

1. Press the control panel release button and remove the control panel from the body.
2. Disengage the four engagements (a, b, c and d) retaining the front panel with a minus screw driver.
3. When the front panel has been removed, the connector CP905 on the relay P.C. board attached to the front panel and the connector CJ905 on the main amplifier P.C. board will be disconnected automatically.

■ Method of removing the cassette mechanism assembly (Refer to Fig. 5-4)

1. From the connector CP903 on the preamplifier P.C. board, remove the # 5 PIN connector outgoing from the head relay P.C. board.
2. From the connector on the cassette mechanism control P.C. board, remove the # 7 PIN connector outgoing from W901 on the main amplifier P.C. board.
3. Remove the four screws (3 × 2 and 4 × 2) retaining the cassette mechanism assembly.

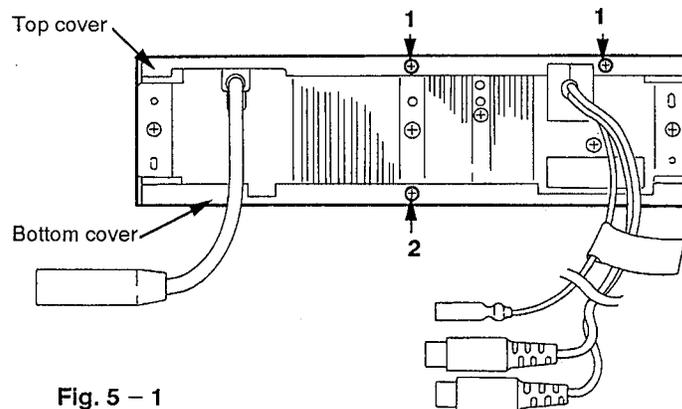

Fig. 5-1

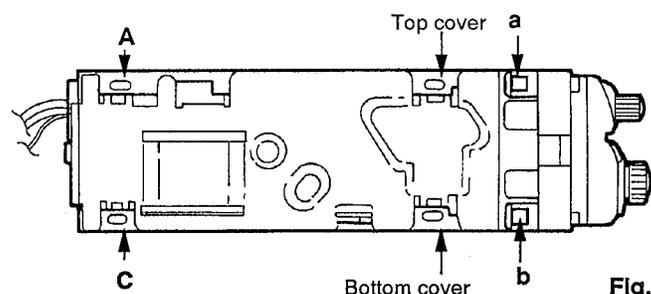

Fig. 5-2

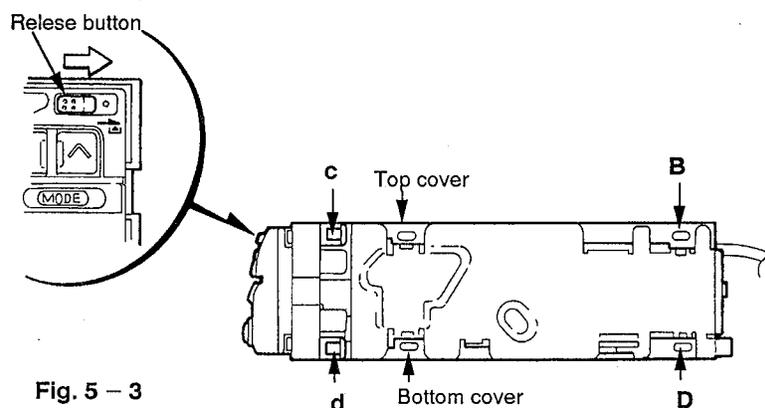

Fig. 5-3

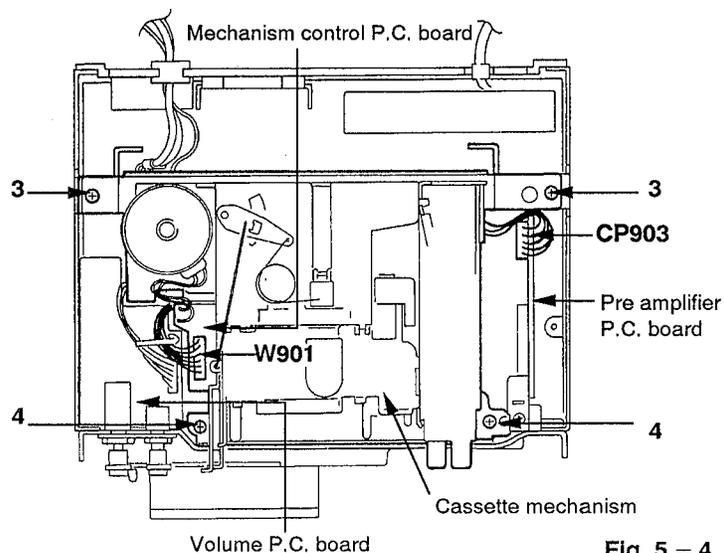

Fig. 5-4

■ **Method of removing the preamplifier P.C. board (Refer to Fig. 5-5)**

1. Remove the one screw (5) retaining the preamplifier P.C. board.
2. Disengage the connection between the connector CP901 on the preamplifier P.C. board and the connector CP906 on the main amplifier P.C. board.

■ **Method of removing the volume P.C. board (Refer to Fig. 5-5)**

1. Remove the two shaft knobs from the [BASS /TREBLE] volume shaft.
2. From the body, remove the two nuts retaining the [BASS/TREBLE/BALANCE] volume.

■ **Method of removing the FF/REW lever assembly (Refer to Figs. 5-6 and 5-7)**

1. Remove the cassette mechanism assembly (Refer to [Method of removing the cassette mechanism assembly]).
2. From the cassette mechanism assembly, remove the two screws (6) retaining the mechanism holder.
3. From the cassette mechanism body, remove the one screw (7) retaining the FF/REW lever assembly (Refer to Fig. 5-7).
4. Raise the LL/REW lever assembly in the direction of the arrow as indicated in Fig. 5-7.
5. Remove the tip of the FF/REW lever assembly from the notch hole on the chassis (Refer to Fig. 5-7).

■ **Method of removing the PLAY head (Refer to Figs. 5-7 and 5-8)**

1. Remove the top cover (Refer to [Method of removing the top cover]).
2. Remove the cassette mechanism assembly (Refer to [Method of removing the cassette mechanism assembly]).
3. Remove the FF/REW lever assembly (Refer to [Method of removing the FF/REW lever assembly]).
4. From the cassette mechanism assembly, remove the one screw (8) retaining the head relay P.C. board.
5. Remove the two screws (9) retaining the PLAY head. Meanwhile, be sure to adjust the head azimuth and height successively from A to D at the time of reassembly.

■ **Method of removing the pinch roller assembly (Refer to Fig. 5-8)**

1. Remove the top cover (Refer to [Method of removing the top cover]).
2. Remove the cassette mechanism assembly (Refer to [Method of removing the cassette mechanism assembly]).
3. Remove the FF/REW lever assembly (Refer to [Method of removing the FF/REW lever assembly]).
4. Remove the nylon washers retaining the pinch roller assemblies on the right and left sides).

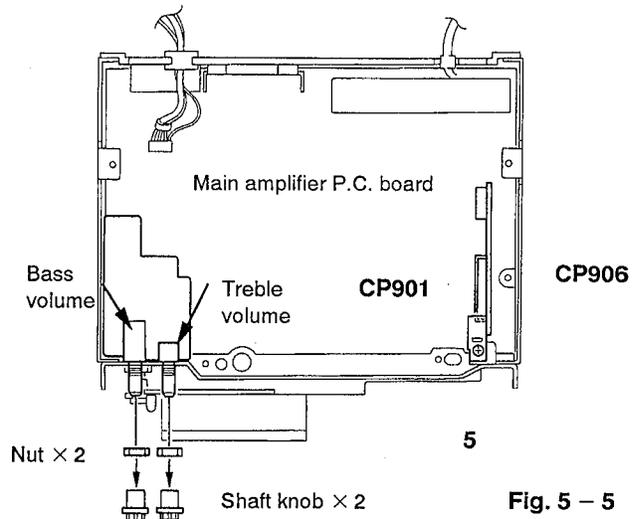

Fig. 5 - 5

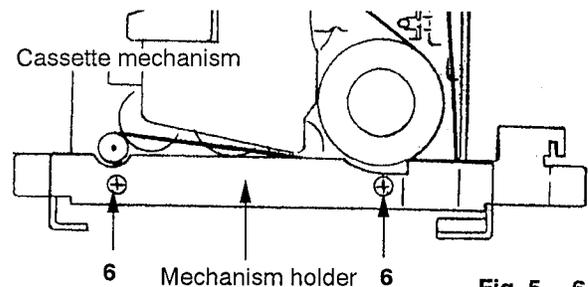

Fig. 5 - 6

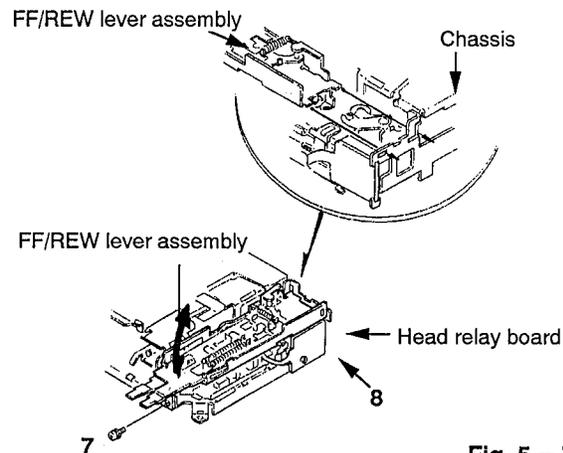

Fig. 5 - 7

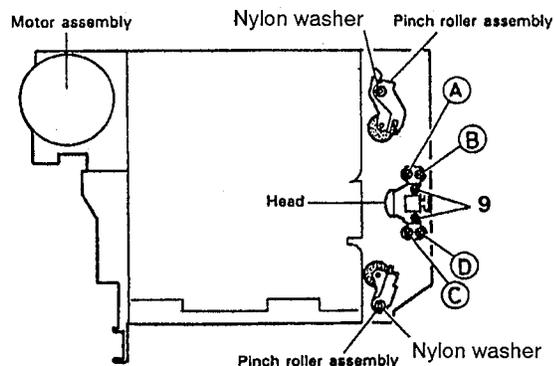

Fig. 5 - 8

6. Main Adjustment

■ Test Instruments required for adjustment

1. Digital oscilloscope(100 MHz)
2. AM Standard signal generator
3. FM Standard signal generator
4. Stereo modulator
5. Electric voltmeter
6. Digital tester
7. Tracking offset meter
8. Pulse jitter meter
9. Test Tapes
 VTT721 For Output level measurement
 VTT724 For DOLBY level measurement
 VTT739 For playback frequency measurement
 VTT712 For wow flutter&tape speed measurement
 VTT704 For head azimuth measurement
10. Torque gauge.....Cassette type for CTG – N
 (mechanism adjustment)
 TW – 2111A(FWD PLAY)
 TW – 2121A(REV PLAY)

■ Measuring conditions (Amplifier section)

- Power supply voltage..... DC14.4V(10.5~16V)
 Load impedance..... 4 Ω (Speaker connection)
 4 Ω (SPEAKER OUT:2ch)

● Standard volume position

Balance and Bass &Treble volume to be centre. Output level to be adjusted to 1.4V with test tape VTT724.

■ Tuner section

Manual tuning up/down frequency

FM : 0.2MHz step

AM : 10kHz step

Setting of referance frequency of SSG

AM mode 400Hz, 30%modulation

FM mono mode 400Hz, 22.5kHz deviation

FM stereo mode1kHz, 67.5kHz dev.,
 pilot 7.5kHz dev.

Output level..... 0dB(1 μ , 50 Ω /open terminal)

Dummy load

Exclusive dummy for AM, FM should be used. Using FM dummy load, 6dB loss occurs between SSG output and antenna input.

Standard Input.....AM:74dB μ , FM:66dB μ

The 6dB loss need not to be considered since direct reading figures are applied in this working standard.

Initial preset stations

Band	1	2	3	4	5
FM1(MHz)	87.5	89.9	97.9	105.9	107.9
AM(kHz)	530	600	1000	1500	1710

■ Arrangement of adjusting position (Test point : refer to page 28.)

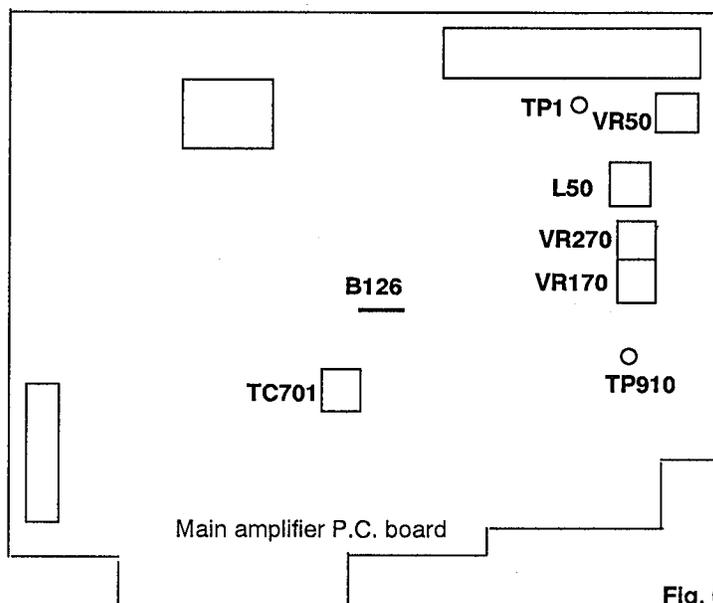

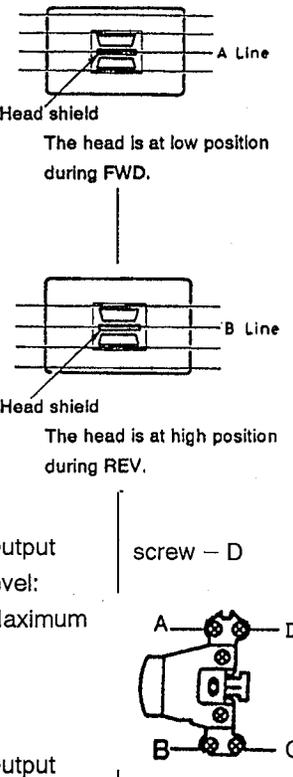

Fig. 6 – 1

■ Tape section adjustment

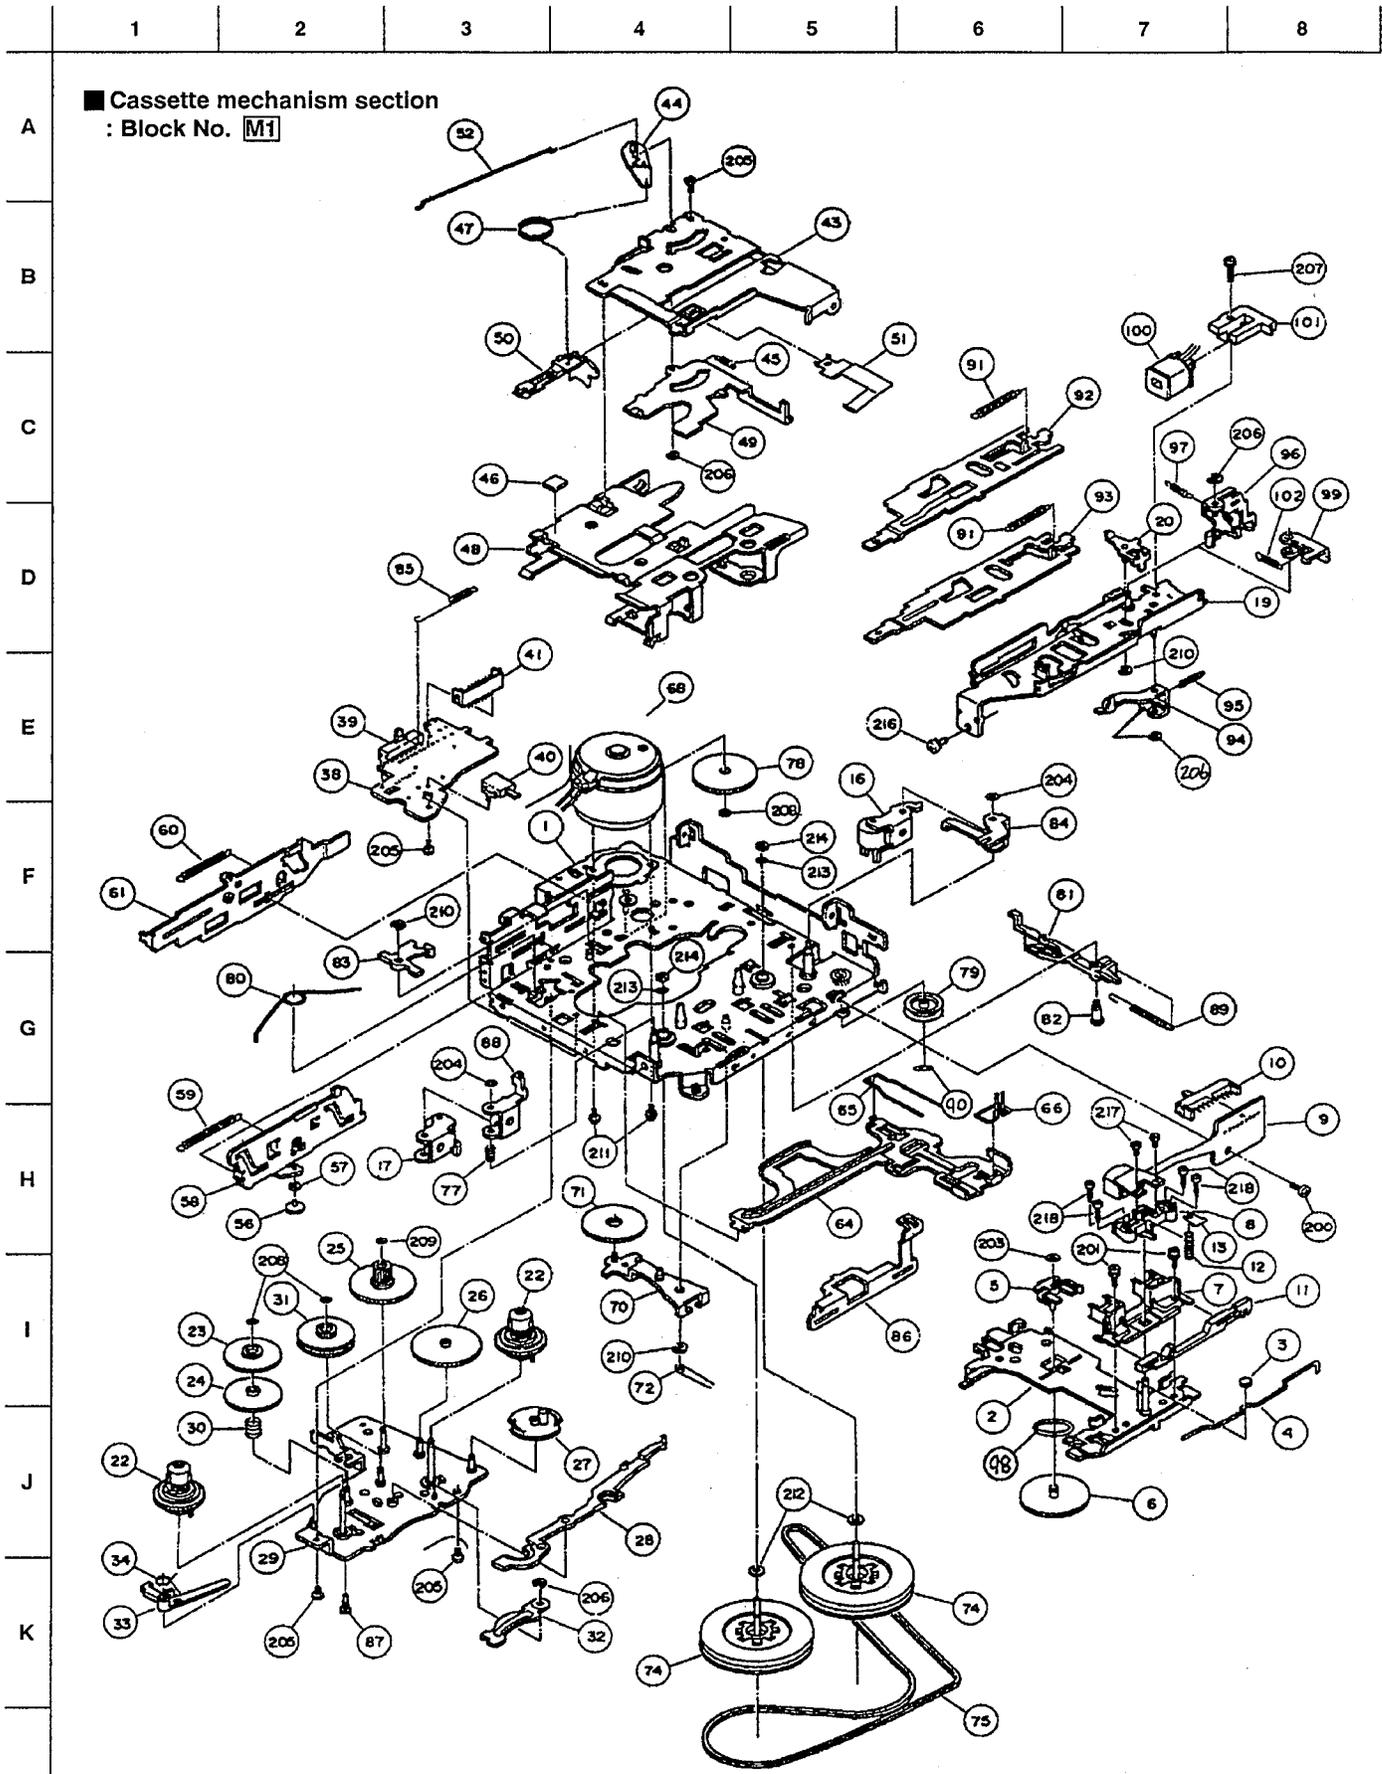

Item	Conditions	Adjustment and Confirmation methods	S.Values	Adjust
<p>1. Head Azimuth Adjustment</p>	<p>Test tape: SCC – 1659 VTT704</p>	<p>★ In case the head and its height have been changed, it will be necessary to adjust the height of the head.</p> <p>1. Adjustment of the height of head</p> <p>1)When the mirror tape SCC – 1659(2line tape) is travelling in the FWD. direction ,adjust the screws A and B so that the line A is located at the center of the shield plate between the head channels.</p> <p>2)When the mirror tape SCC – 1659(2line tape) is travelling in the REV.direction, adjust the screws C and D so that the line B is located at the center of the shield plate between the head channels.</p> <p>2. NOTES

1. VOLTAGES ARE DC-MEASURED WITH A DIGITAL VOLT METER WITHOUT INPUT SIGNAL.
CONDITION — FM MODE AM MODE —
2. UNLESS OTHERWISE SPECIFIED
ALL RESISTORS ARE 1/8W 1% CARBON RESISTOR.
ALL RESISTORS ARE 1/8W 1% METAL GLAZE RESISTOR.
ALL CAPACITORS ARE 50V CERAMIC CAPACITOR OR 50V MYLAR CAPACITOR.
ALL RESISTANCE VALUES ARE IN OHMS.
ALL CAPACITANCE VALUES ARE IN PICOFARADS.
ALL CAPACITORS ARE SHOWN IN THE FORM OF CAPACITANCE (PF)/RATED VOLTAGE (V).
ALL DIODES ARE 1SS133 OR
 - Ⓢ POLYPROPYLENE CAPACITOR
 - Ⓣ 50V 1% MYLAR CAPACITOR OR 50V 1% THIN FILM CAPACITOR
