# Safety Precautions

## J (USA) Only

### Important for Laser Products

1. CLASS 1 LASER PRODUCT
2. DANGER: Invisible laser radiation when open and interlock failed or defeated. Avoid direct exposure to beam.
3. CAUTION: Do not open the bottom cover. There are no user serviceable parts inside the unit; leave all servicing to qualified service personnel.
4. CAUTION: The compact disc player uses invisible laser radiation and is equipped with safety switches which prevent emission of radiation when unloading cartridge and the safety interlocks have failed or are defeated. It is dangerous to defeat the safety switches.
5. CAUTION: Use of controls of adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.
6. CAUTION: The laser is able to function, if safety switches are out of function. The laser light is invisible, avoid exposure, do not disassemble the laser unit, but replace the complete unit.

## B/E/G Only

### Important for Laser Products

1. CLASS 1 LASER PRODUCT
2. DANGER: Invisible laser radiation when open and interlock failed or defeated. Avoid direct exposure to beam.
3. CAUTION: Do not open the bottom cover. There are no user serviceable parts inside the unit; leave all servicing to qualified service personnel.
4. CAUTION: The compact disc player uses invisible laser radiation and is equipped with safety switches which prevent emission of radiation when unloading cartridge and the safety interlocks have failed or are defeated. It is dangerous to defeat the safety switches.
5. CAUTION: Use of controls of adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.

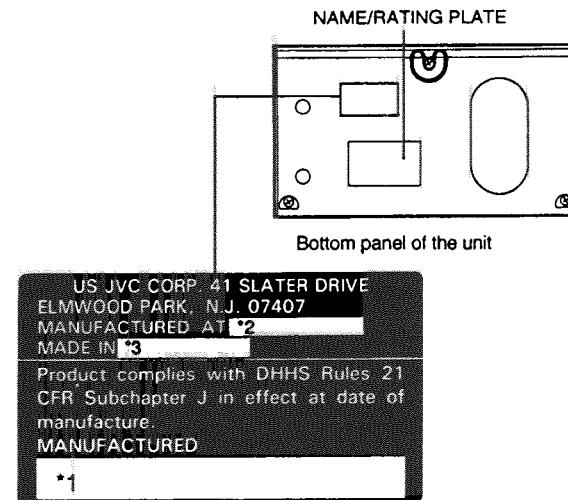

**ADVERSEL:** Usynlig laserstråling ved åbning, når sikkerhedsafbrydere er ude af funktion. Undgå udsettelse for stråling.

**VAROITUS:** Varmuuskytkimen ollessa pois päältä kun laite avataan, siellä kehittyy näkymättöbtä lasersäteilä. Älä pane itseäsi sääteilyn alttiaksi.

**VARNING:** Osynlig laserstråning uppstår vid komponentens öppning när säkerhetsbrytaren är frånslagen.

**ADVARSEL:** Usynlig laserstråling ved åpning når sikkerhetsbryteren er ude af funktion. Unngå utsettelse for stråling.

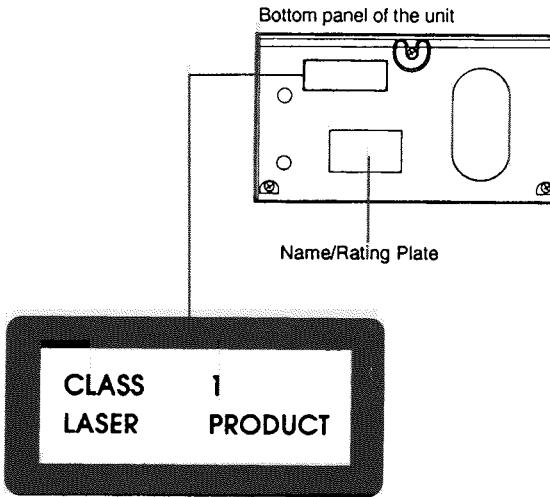

### Identification And Certification Labels

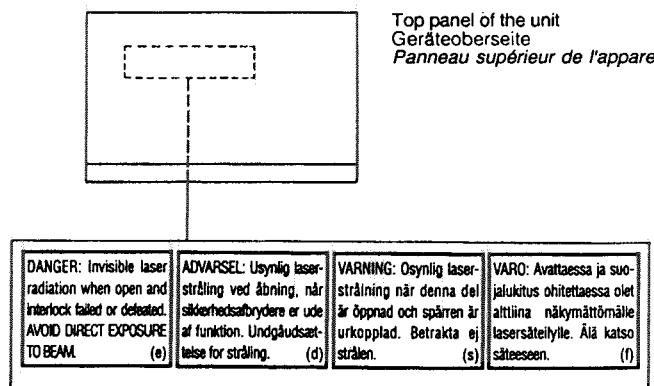

#### Notes

- \*1 The date of manufacture.
- \*2 The ID code of manufacturing plant.
- \*3 Marking of country origin.

### Position And Reproduction Of Labels

Obs:  
Apparaten innehåller laser-komponent av högre laserklass än klass 1.

# CD CHANGER SECTION

## ■ Instructions(Extracts)

### SPECIFICATIONS

#### CD CHANGER SECTION

Frequency response: 5 – 20,000 Hz

Dynamic range: 93 dB

S/N ratio: 96 dB

Distortion: 0.006 %

Wow & flutter: Less than measurable limit

Output terminal: Analog (8 pin x 1), 1.5 V (Full scale)/Less than 1 kΩ

#### GENERAL

Power requirement

Operating voltage: DC 14.4 V (11 V – 16 V

Allowable)

Grounding system: Negative ground

Dimensions (W x H x D):

274 x 75 x 178 mm

(10-13/16" x 3" x 7-1/16")

Gross Weight: 3.6 kg (8.0 lbs)

*Design and specifications subject to change without notice.*

### INSTALLATION

- Before installation, be sure to remove the screw and holder (shown by A) for transportation. Now, stick the seals provided over the holes in the bottom of the unit. (Fig. a)

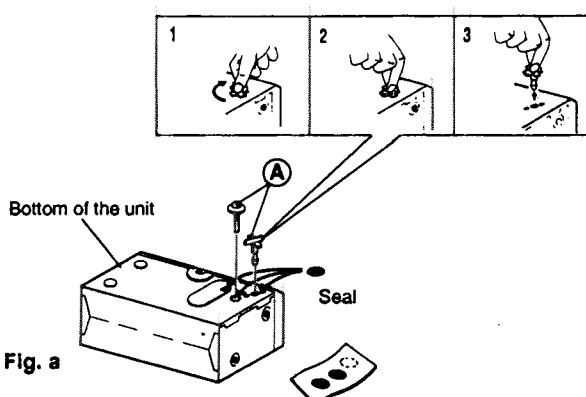

Fig. a

- Avoid installing in the following places
  - Where it would be exposed to direct sunlight or heat directly from the heater or in an extremely hot place.
  - Where it would be subject to rain, water splashes or excessive humidity.
  - Where it would be subject to dust.
  - Where it would be positioned on an incline or unstable place.
  - Above connection cords or on the floor under which there is piping.
  - Where it could damage the car's fittings (spare tire, etc.) in or under the trunk.
- Before drilling holes in the trunk to install the unit, make sure that there is a sufficient space under the trunk so that you do not drill holes in the fuel tank, etc.
- Firmly install the unit using the provided screws.

#### (Example of installation A)

- When installing on the floor of the trunk, etc. using the mounting base

1. Stick spacer on the bottom of the mounting base. (Fig. b)

2. Remove the carpet from the place where the unit is to be installed and mark the position of the mounting base, then stick the mounting base on the floor. (Fig. c)

#### Note:

When sticking the mounting base on the floor, wipe off the surface dirt, oil, etc. and avoid installing on a concave or convex surface.

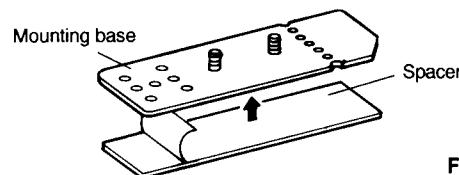

Fig. b

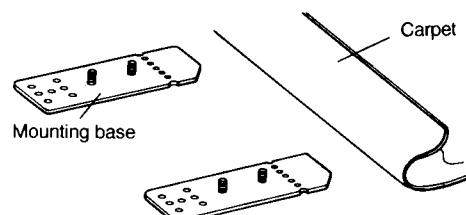

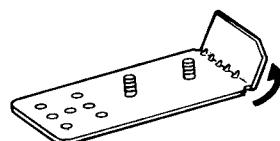

Fig. c

Cut off if it is too long.

- It is recommended that you install the unit directly using tapping screws when mistracking occurs. (See page 8.)

- Cut the carpet so the bolts fit through it. (Fig. d)

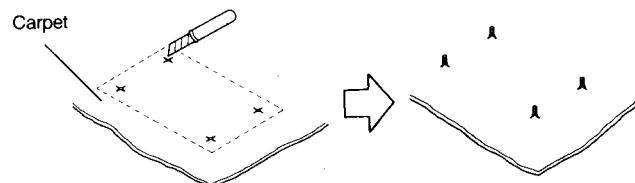

Fig. d

4. Install the mounting brackets on the side panels of the unit using screws (M4 x 8 mm). (Fig. e)

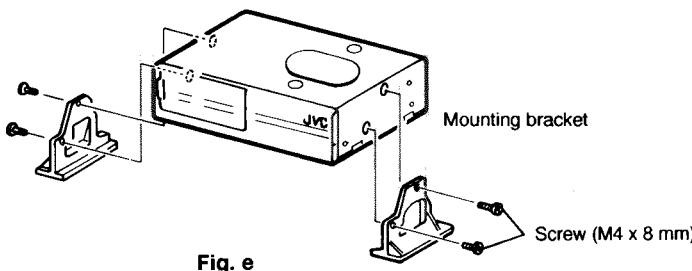

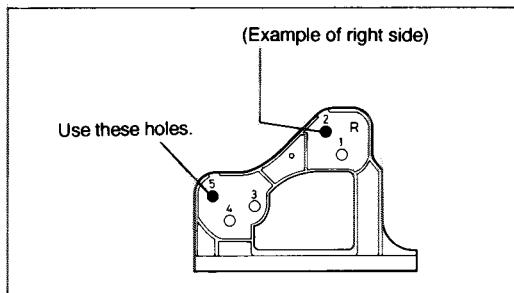

Fig. e

5. Place the unit on the carpet so that the bolts fit in the holes of the mounting bracket and install using washers and nuts (M5). (Fig. f)

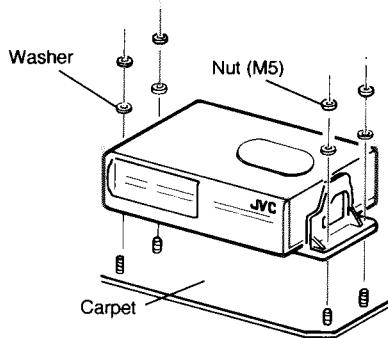

Fig. f

#### (Example of installation B)

- When installing on the floor of the trunk, etc. using tapping screws
1. Install the mounting brackets on the side panels of the unit using screws (M4 x 8 mm) referring to the diagram. (Fig. e)
  2. Install the unit on the floor of the trunk using tapping screws. (Fig. g)

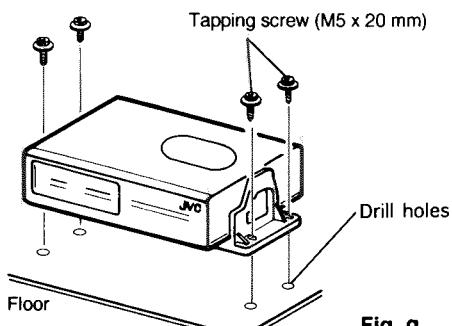

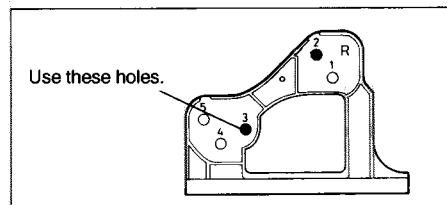

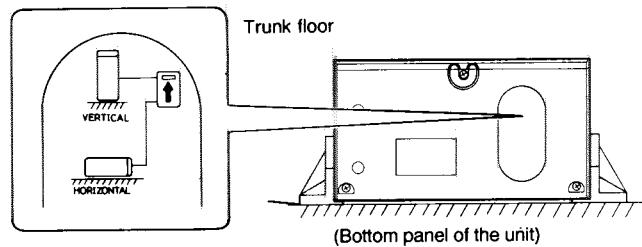

Fig. g

#### (Example of other installations)

- When installing the CD changer upright on the trunk floor. (Fig. h)

#### Notes:

1. To install, refer to the above "Example of installation A or B".
2. When the CD changer is installed upright, set the selector located at the bottom to the "VERTICAL" position. (When it is installed horizontally, be sure to set the selector to the "HORIZONTAL" position.)
  - When installing upright, securely install to the trunk floor.

- When installing the CD changer to hang in the trunk space. (Fig. i)

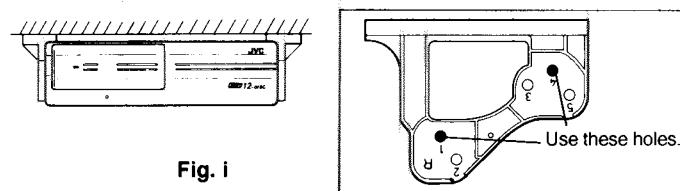

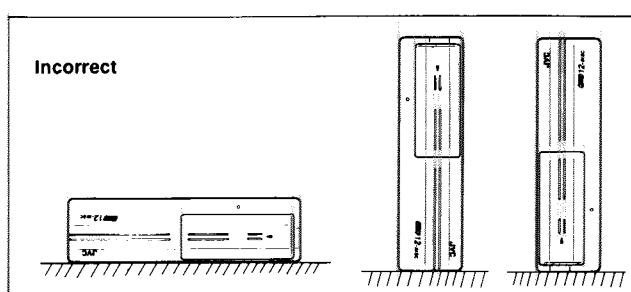

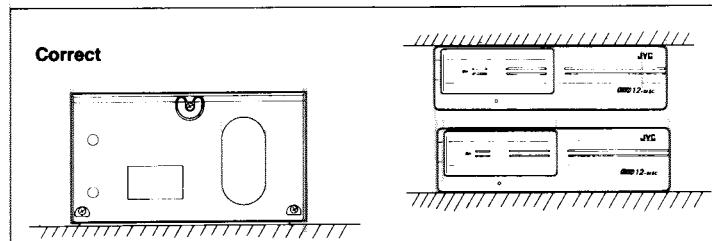

Fig. i

#### Note:

To install, refer to the above "Example of installation A or B".

## ELECTRICAL CONNECTIONS

To prevent short circuits from occurring, while making connections, keep the battery's negative terminal disconnected. We recommend that you make all electrical connections (see Fig. k) before installing the unit. If you're not sure of your ability to correctly install this unit, have it installed by a qualified service technician.

- Be sure to ground this unit to the car's chassis.

### Connections

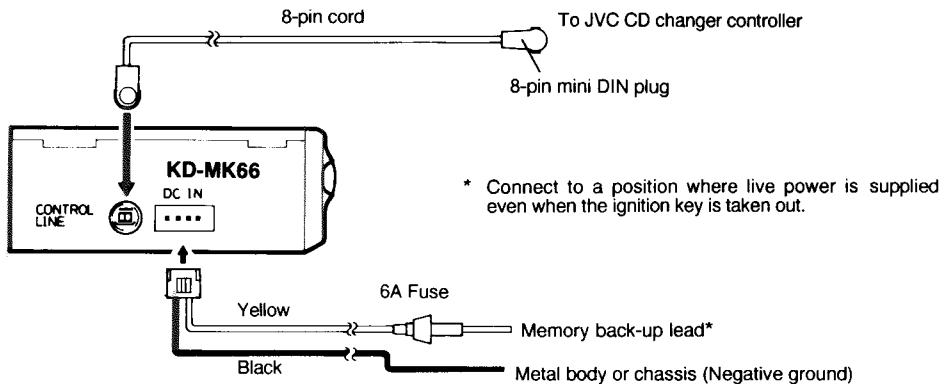

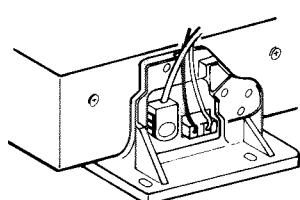

Fig. k

### Note:

- The CD magazine cannot be ejected when the memory back-up lead or cord is disconnected or the fuse is blown.

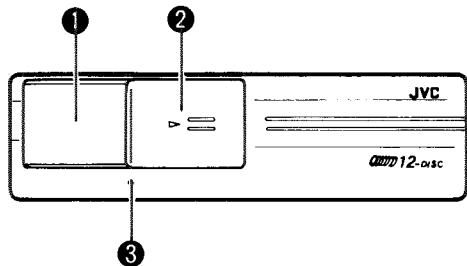

### Microcomputer reset button

After completing installation and connection, load the magazine and press the reset button using a ball-point pen or other pointed instrument to reset the microcomputer.

Normally do not use this button. However, when the power supply is interrupted such as for replacement of the car's battery, press this button. Also press it when the built-in microcomputer does not operate properly due to noise or when the changer does not function correctly when the controller is operated.

## LOCATION OF CONTROLS

- ① CD magazine slot
- ② Door
- ③ Microcomputer reset button

## HANDLING COMPACT DISCS AND MAGAZINES

### How to handle magazines

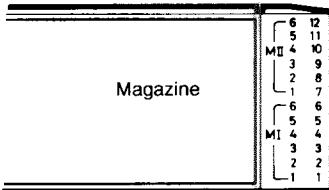

- Care in handling magazines

1. Always keep twelve disc trays loaded in the magazine.
2. When removing or inserting disc trays, hold the magazine horizontally.
3. Place compact discs on trays before inserting them in a magazine. Never put discs directly into magazines.
4. Do not expose it to high temperatures or direct sunlight.
5. Do not disassemble magazines.
6. Take care not to drop or hit magazines. Do not apply excessive pressure to disc trays which have been removed from magazines.
7. Never apply solvents such as benzine, thinner and insecticide to the magazine or disc trays. These solvents may erode their surfaces.

\* Additional magazine (XC-M120) must be purchased separately.

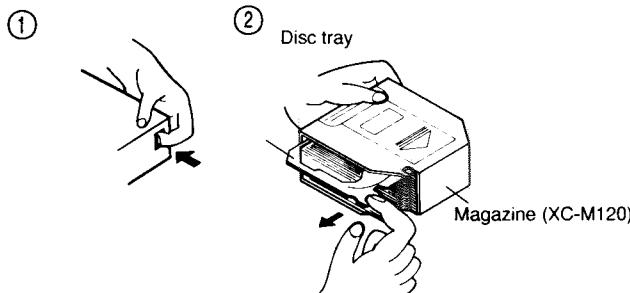

- How to load discs

1. The discs are in numerical order, with 1 at the bottom and 12 at the top. Load discs in the magazine in the required order.

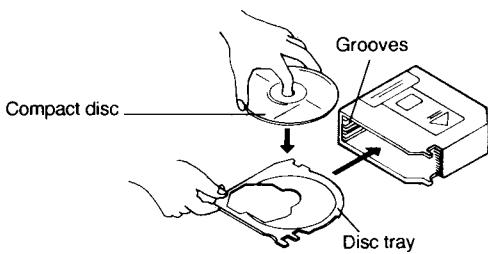

1. Disc trays can be removed from magazines.

- ① While pressing the RELEASE button....
- ② Slide the disc tray partly out.

2. Pull the disc tray completely out of the magazine and place a CD on it with its label side up.

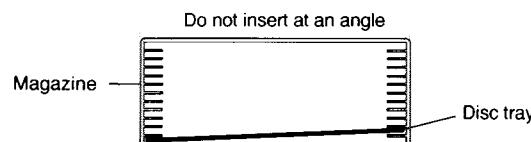

3. Line up the disc tray with the grooves in the magazine, and push the disc tray all the way in. Never bend or force the disc tray into the magazine. It is not necessary to depress the disc tray RELEASE button when inserting the disc tray.

- Check that the disc tray is securely inserted into the magazine. If a CD becomes disengaged from the disc tray, reposition it on the disc tray.

### Notes:

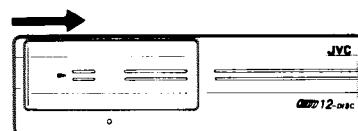

- If a disc tray is inserted at an angle, it may cause a malfunction.

- There are openings in the disc trays through which signals are read from the discs. These openings leave part of the shiny side of the disc exposed. Be careful not to touch the shiny surface of the disc.
- It is not possible to play a compact disc if it is installed upside down.
- Be sure to insert the twelve disc trays when using the magazine. If not, the CD changer may not operate correctly.

### How to load a magazine

1. Open the door.

2. Load a magazine.

- Load a magazine into the CD changer with the "Δ" mark on top (Fig. I) and the CD insertion side to the right.
- If a magazine's label partly peels off, it may cause a malfunction. If this happens, remove the label or stick it on firmly again.

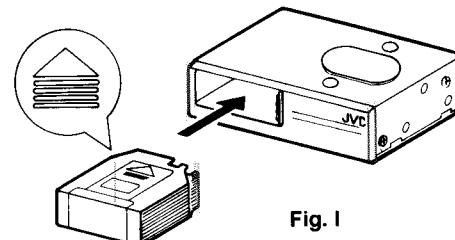

Fig. I

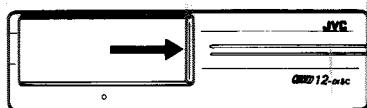

### Caution:

- Do not insert your hands or any foreign object into the loading slot as you may be injured or cause malfunctions or damage.

3. Close the door.
  - The door should be closed other than when a magazine is loaded or unloaded.

### How to unload a magazine

To unload a magazine, open the door fully to the right side to eject the magazine.

#### Note:

When the magazine cannot be ejected, push in the magazine and play the 12th disc once more; when play has ended, repeat the above procedure (i.e., open the door).

#### ● Listening to CDs

- This unit does not have operation buttons to play CDs. CD operations can be performed using the JVC CD changer controller, etc. connected to this unit. For CD operations, refer to the instructions of the CD Changer Controller.

### How to handle CDs

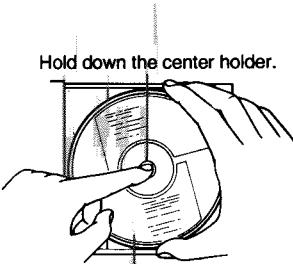

- Use compact discs with the mark shown.

- Do not touch the recorded surface of the disc (reflective side, opposite to the label) when handling the discs.

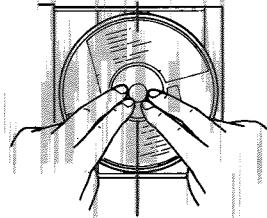

#### ● Storage

Make sure to keep discs in their cases. If discs are piled on top of one another without their cases, they may be damaged. Do not put discs where they will be exposed to direct sunlight or in a place subject to high temperatures and humidity. Avoid leaving discs in your car.

Lift it out without touching the recorded surface.

Insert with the label facing up.

Press gently on the disc to insert.

#### ● Maintenance of discs

- When fingerprints and dirt adhere to a disc, wipe the disc clean with a soft, dry cloth, wiping from the inside towards the edge. If it is difficult to clean, wipe the disc with a cloth moistened with water.
- Do not use record cleaners, benzine, alcohol or antistatic agents.
- Do not damage the label side or stick paper or adhesive to the surface.

## 1 Location of main parts

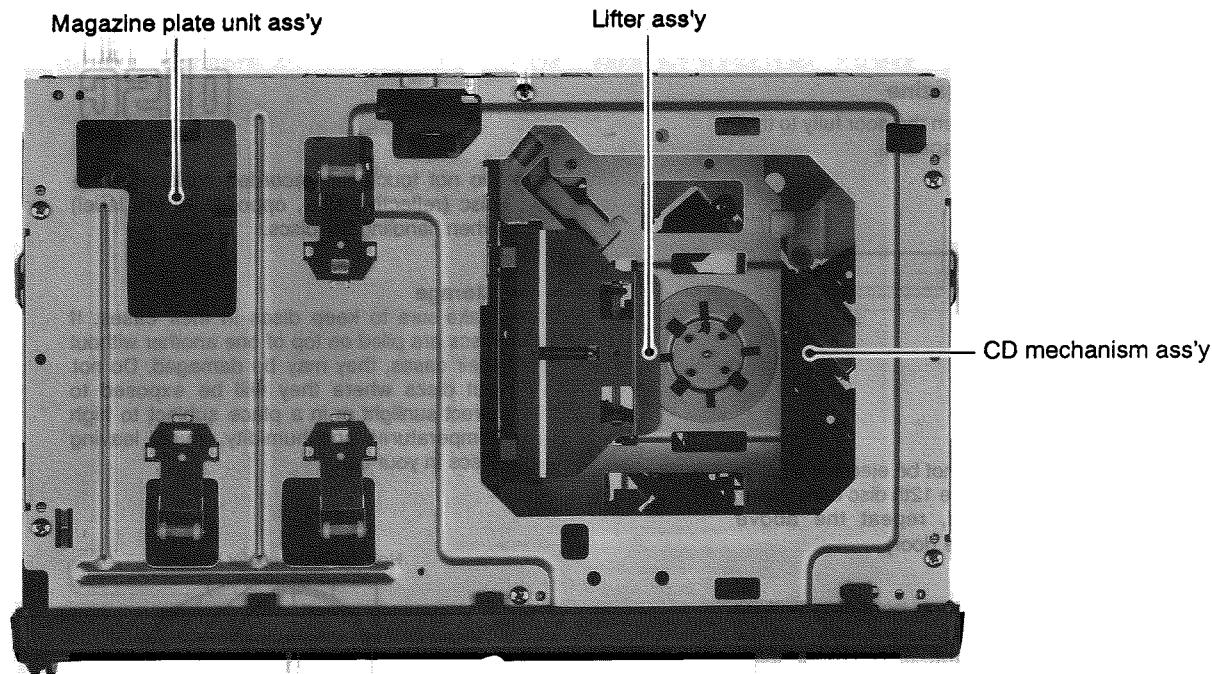

Fig.1 - 1

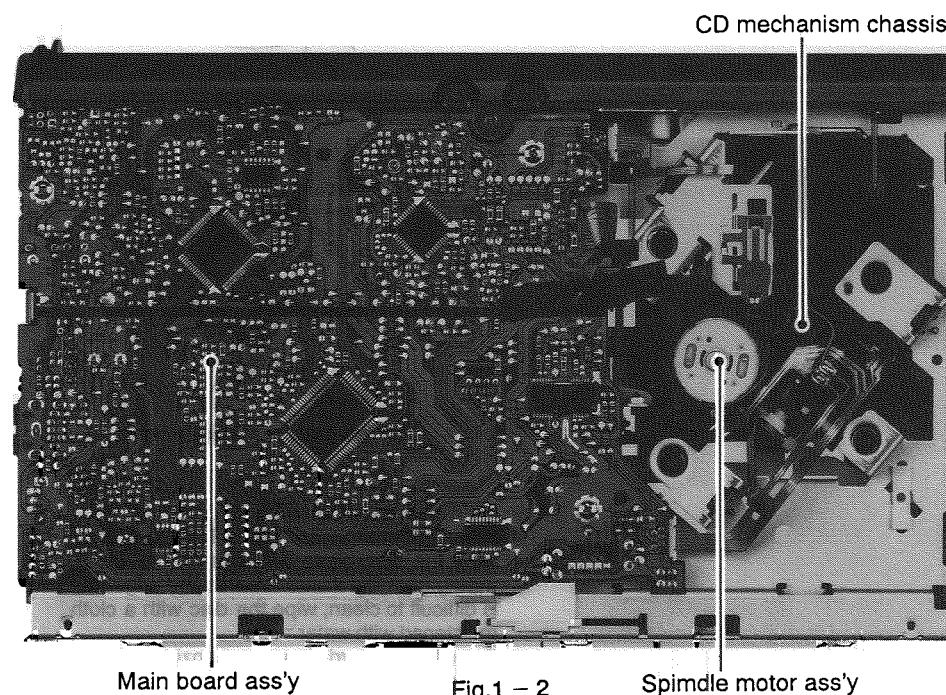

Fig.1 - 2

### ◆ CD mechanism ass'y

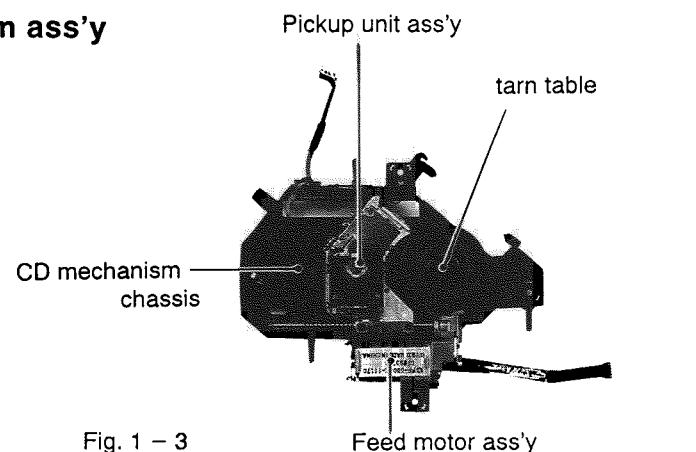

Fig. 1 - 3

## ■ Positioning diagram of switches and motors, etc.

### ◆ Top view

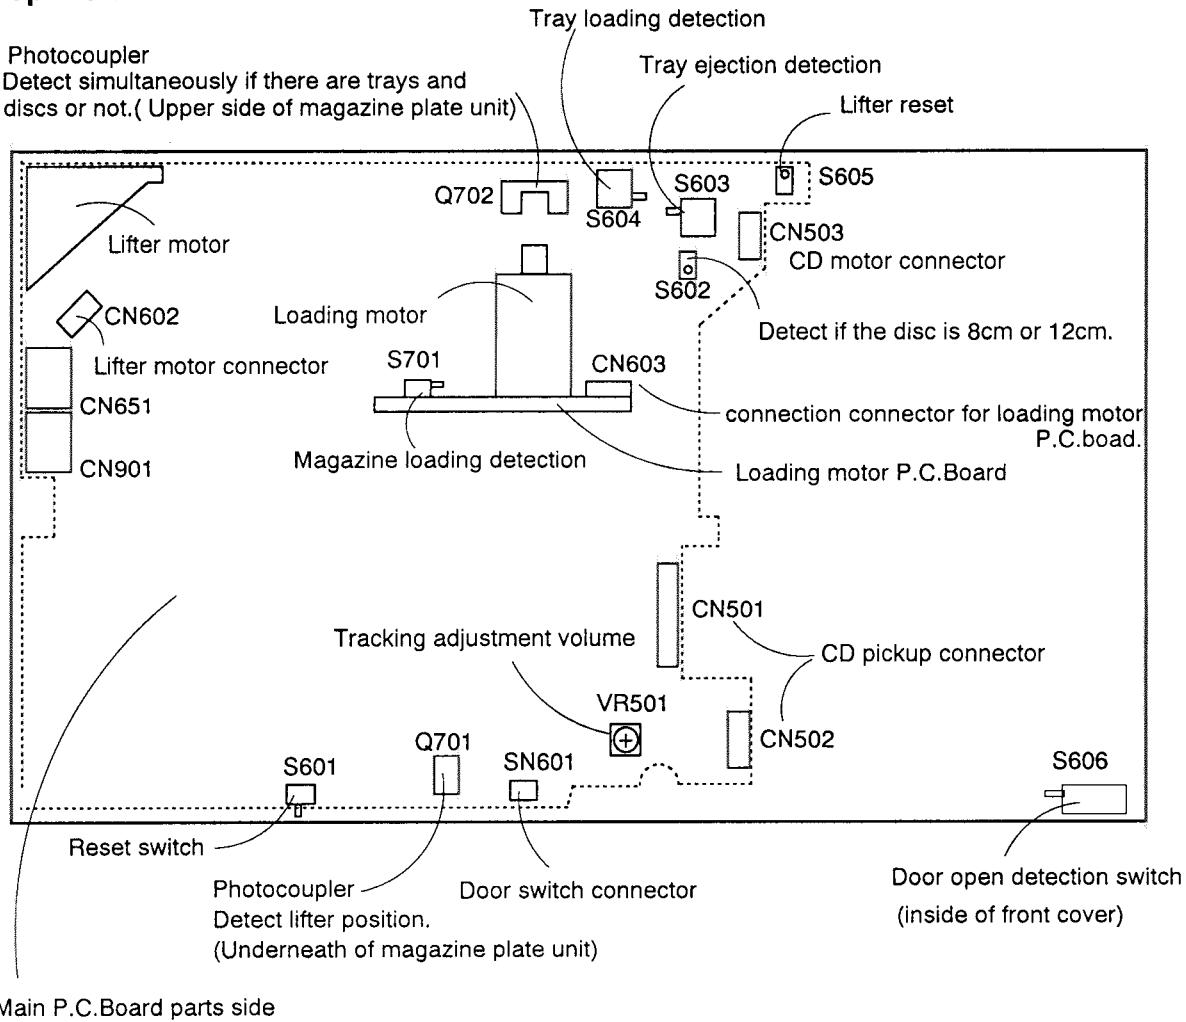

Fig. 1 – 4

★ Lifter motor and Q702 photocoupler can be seen from the top view. Other parts are indicated by cord, but not seen.

## 2 Removal of main parts

### Procedures for removal of parts(Described considering assembly)

#### ◆ Main P.C.B. Ass'y

Remove the four screws retaining the top cover, bottom cover, front panel ass'y and main P.C.B. Remove the flexible wire from the CD mechanism ass'y.

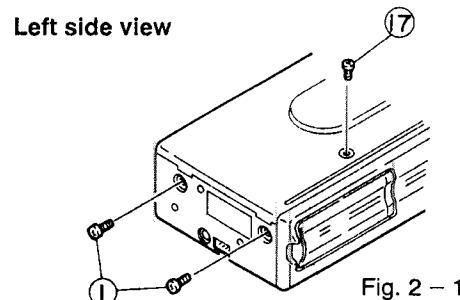

Fig. 2 - 1

#### ◆ Lifter Ass'y

Remove the top cover, bottom cover, front panel ass'y, top plate ass'y, rear panel ass'y and lifter ass'y.

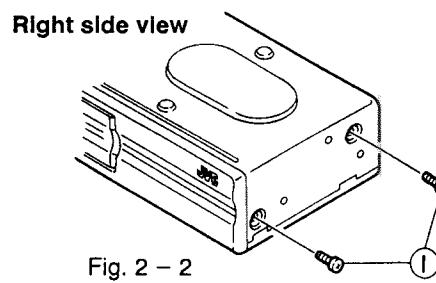

Fig. 2 - 2

#### ◆ CD Mechanism

Remove the top cover, bottom cover, front panel ass'y, top plate ass'y, rear panel ass'y, lifter ass'y and CD mechanism ass'y.

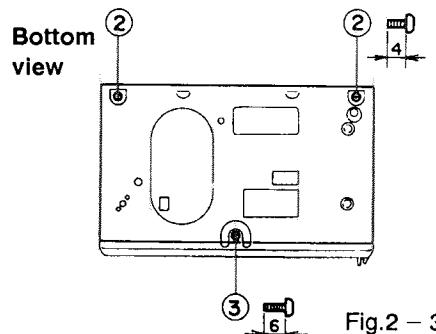

Fig. 2 - 3

#### ◆ Magazine Plate Unit

Remove the top cover, bottom cover, front panel ass'y, top plate ass'y, rear panel ass'y and lifter ass'y and magazine plate unit.

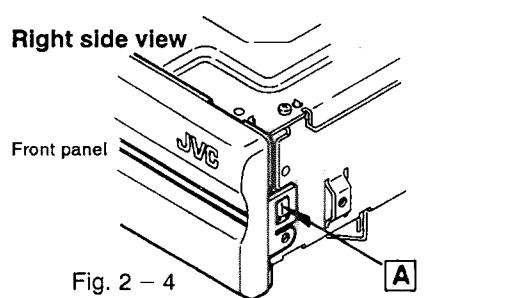

Fig. 2 - 4

#### ◆ Loading Gear Ass'y

Remove the top cover, bottom cover, front panel ass'y, top plate ass'y, rear panel ass'y, lifter ass'y, magazine plate unit ass'y and loading gear ass'y.

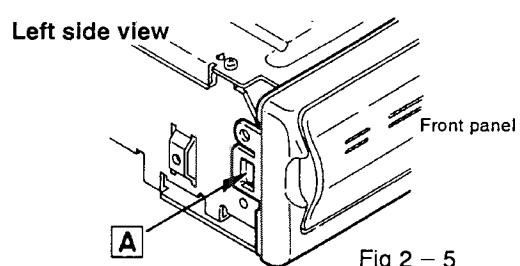

Fig 2 - 5

### Disassembly procedure for KD - MK66

#### ■ External case sections

##### ◆ Top Cover (see Fig.2-1~Fig. 2-2)

1. Remove four retaining screws ① from the left and right.
2. Remove one screw ⑦ retaining the front side of top cover.
3. Remove by pushing the right side of top cover inward to lift it up.

##### ◆ Bottom Cover (see Fig.2-3)

1. Remove two screws ② retaining the bottom cover.
2. Remove one screw ③ retaining center section of bottom cover.

##### ◆ Front Panel (see Fig.2-4~Fig. 2-6)

1. Slightly pull out the panel while disengaging the right and left tabs A.
2. Remove the door switch connector (CN601) from the front panel door in the center of main P.C.B.

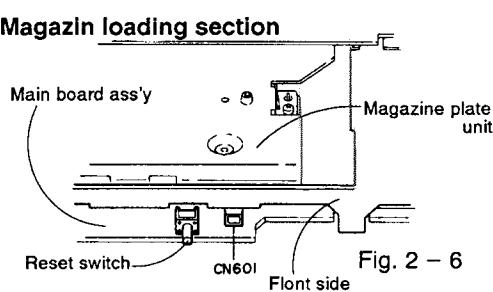

Fig. 2 - 6

## ■ Mechanism section (remove in the following order)

### ◆ Top Plate Ass'y (see Fig. 2-7)

1. Remove the six screws ⑥ retaining the top plate.
2. Lift up the top plate and slide it to the front so that the safety rod is vertical, then remove it from the right side.

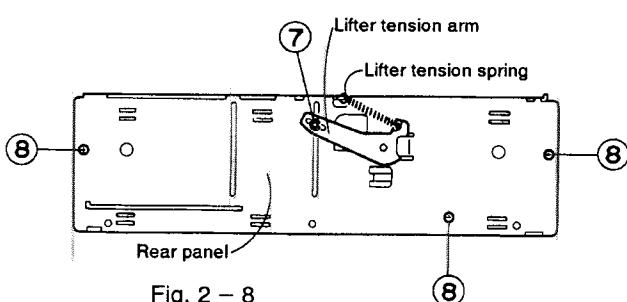

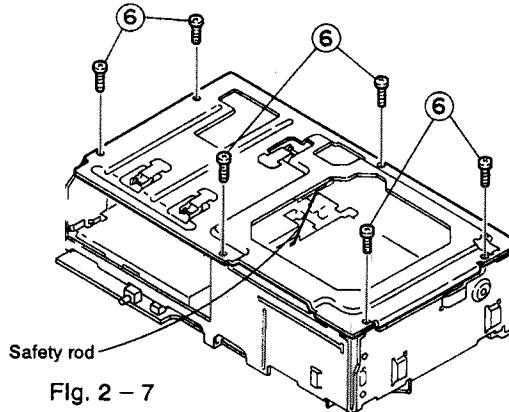

### ◆ Rear Panel (see Fig. 2-7~Fig. 2-10)

1. Remove the lifter tension arm spring.
2. Remove the one E-washer ⑦ of lifter section.
3. Remove the lifter tension arm.

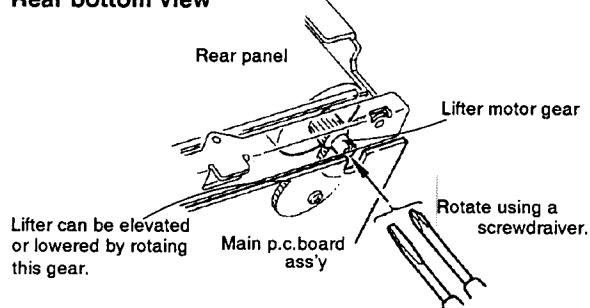

Note:

With the unit's front side facing you and the unit placed on its bottom, float the reset switch connected to the main P.C.B.

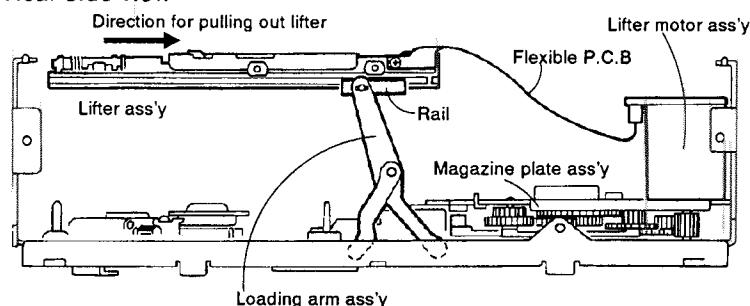

4. Turn the lifter motor clockwise from the main P.C.B. to elevate it to the uppermost position. (The torque of lifter motor is small.)
5. Remove three screws ⑧ retaining the rear panel to remove it.
6. Remove the flexible P.C.B. for the lifter ass'y sensor from the lifter motor P.C.B connector.
7. Remove the front side arm of lifter ass'y, then pull the lifter ass'y towards the magazine slot and remove it from the rear loading arm.

Rear bottom view

Rear side view

### ◆ Magazine Plate Unit (see Fig. 2-11)

1. Remove three screws ⑨ and ⑩ retaining the magazine plate unit.
2. Lift up the magazine plate unit to remove the lifter motor from the main P.C.B. connector.

### ◆ Loading Gear Ass'y (see Fig. 2-12)

1. Remove one screw ⑪ retaining the loading gear and remove the connector between the main P.C.B. and motor P.C.B.

Note:

When the loading gear is removed, the internal gear is disengaged, so care should be taken when handling the gears. (Do not reassemble the gears by placing them in the wrong direction.)

#### Top View

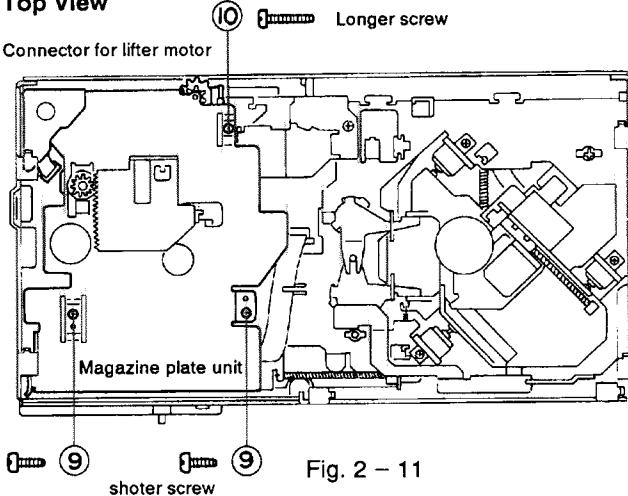

Fig. 2 - 11

#### Top View

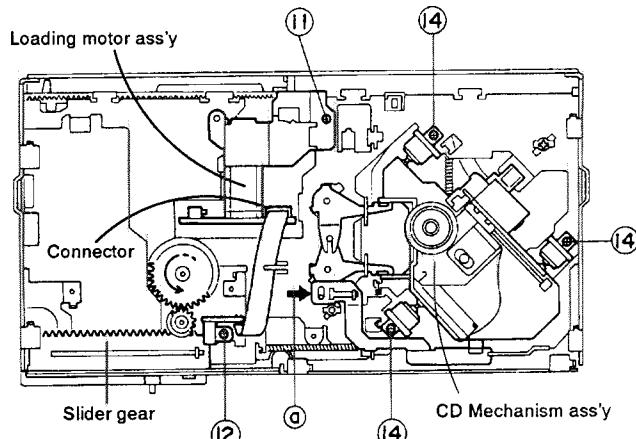

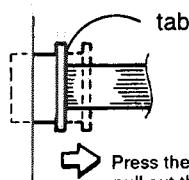

Fig. 2 - 12

Press the tabs in the direction of the arrow to pull out the flexibleP.C.B

2. Remove four tension springs between the CD mechanism and chassis.
3. Facing the front of the unit, remove the three screws ⑭ retaining the damper.
4. Remove the stopper by pressing section ⑮ indicated by the arrow to disengage the CD chassis hold arm.
5. Lift the chassis slightly and remove the CD mechanism ass'y, (Be careful -- the coil springs are easily removed.)

#### Bottom View

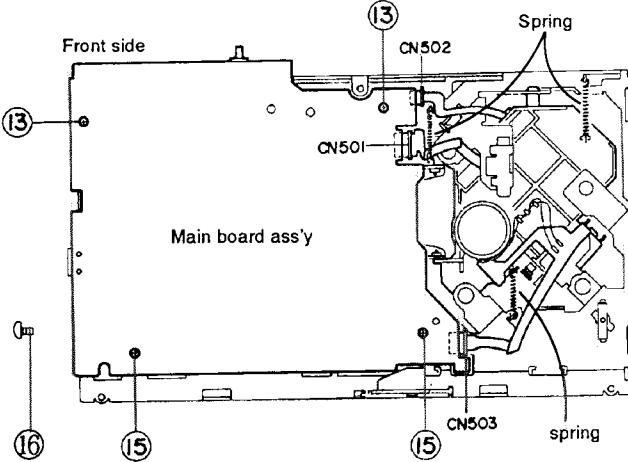

Fig. 2 - 13

### ◆ Main P.C.B. Ass'y

1. Remove four screws ⑯ and ⑰ retaining the main P.C.B. ass'y.
2. Remove the one screw ⑯ reatining the transister.

## ■ Note When assembly

### ◆ Up/down gear position during chassis assembly

Install the center holes of the up/down gear and slider gear so that they are vertically aligned.

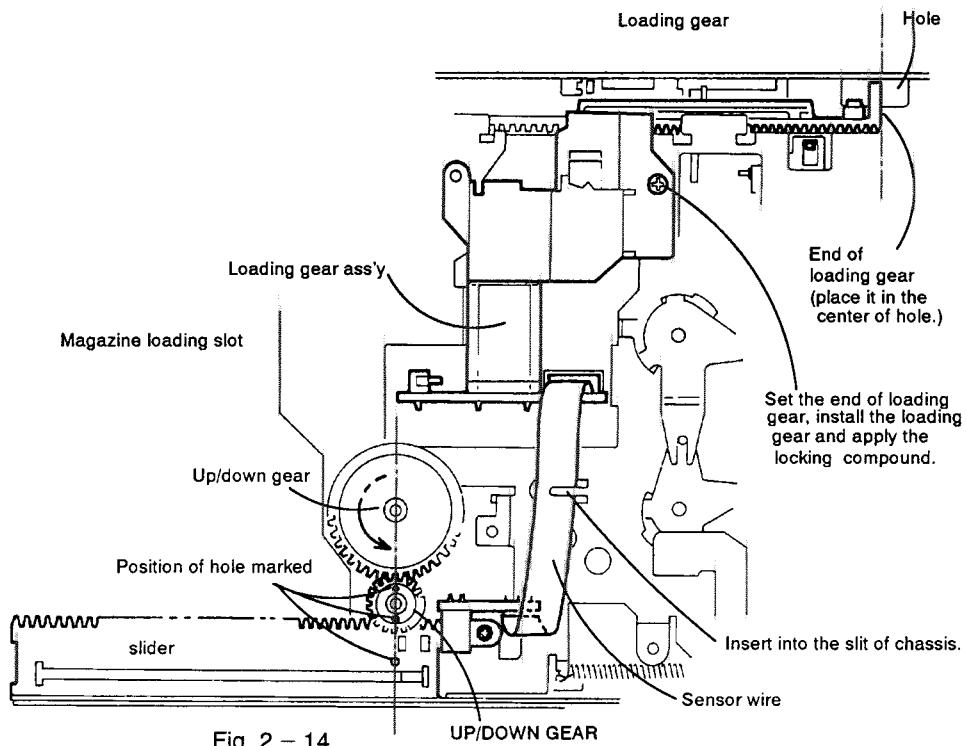

Fig. 2 - 14

### ◆ Gear position when assembling the magazine plate unit

1. Align the gear positions of magazine plate unit ass'y with each other and install the gears in the chassis.
2. Note when installing the chassis.

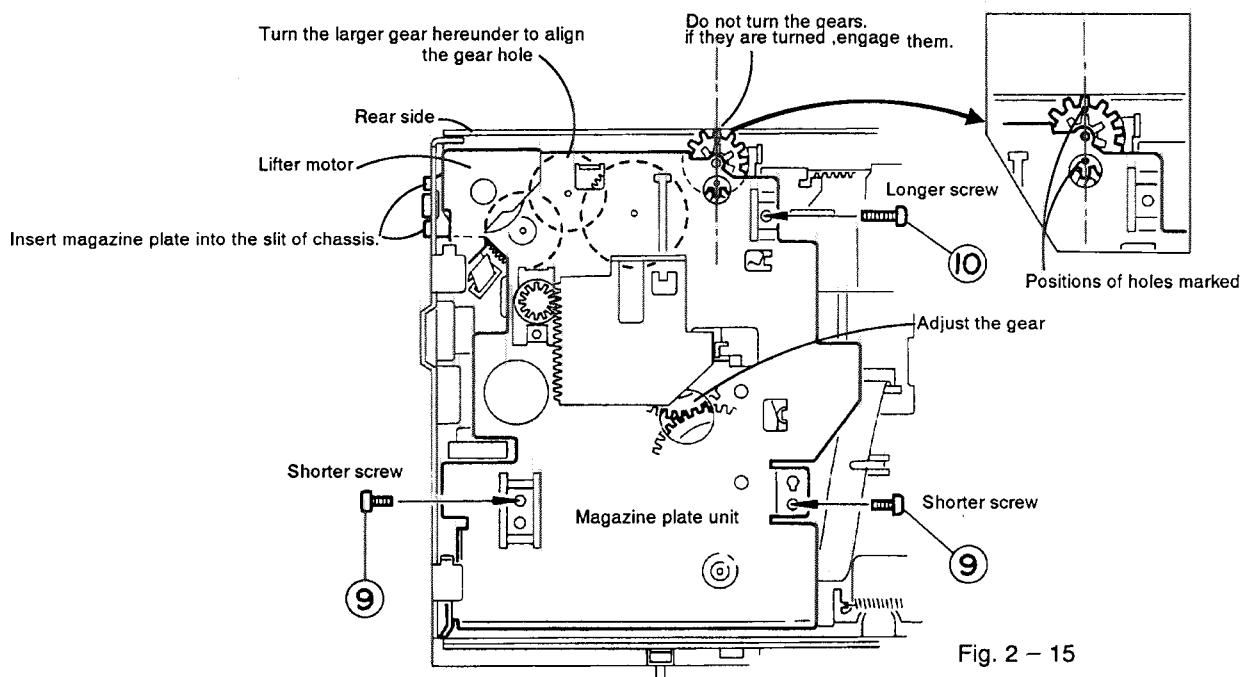

Fig. 2 - 15

### ◆ CD Mechanism Ass'y

#### Procedure

1. Check that four suspension springs ㉙ and ㉚ are installed onto the CD mechanism chassis.
2. Check dampers' ㉛ installation and direction.
3. Press the flexible P.C.B. in the specified position.
4. Install section Ⓐ onto the chassis.
5. Set suspension spring ㉚ in the chassis hole.
6. Assemble the CD mechanism unit while pressing section Ⓑ and set the remaining three suspensions according to the chassis guide.
7. Install the damper to the chassis.

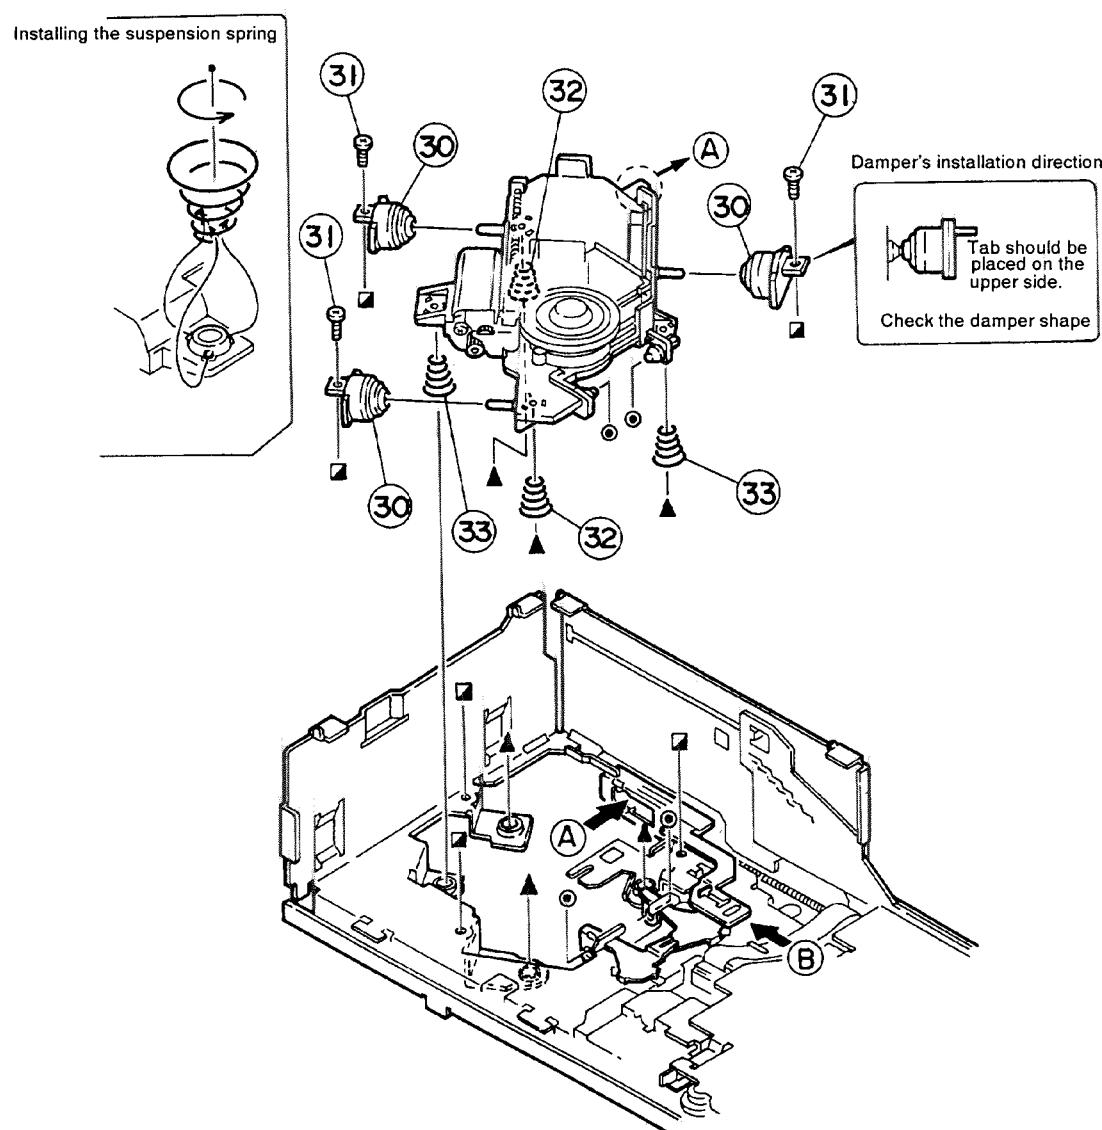

Fig. 2 – 16

### ◆ Installing the Lifter and Rear Panel

1. Check the gear position of magazine plate.
2. Press the lifter into the hook, then install the lifter's front side to the uppermost position.
3. Install the lifter sensor flexible onto the motor P.C.B.
4. Set the rear panel slider to the near CD mechanism.
5. Use your finger to fix the rear panel ass'y slider.
6. Engage the lifter at the uppermost position of rear panel ass'y.
7. Install the rear panel and check that the end of slider gear and gear mark are aligned.

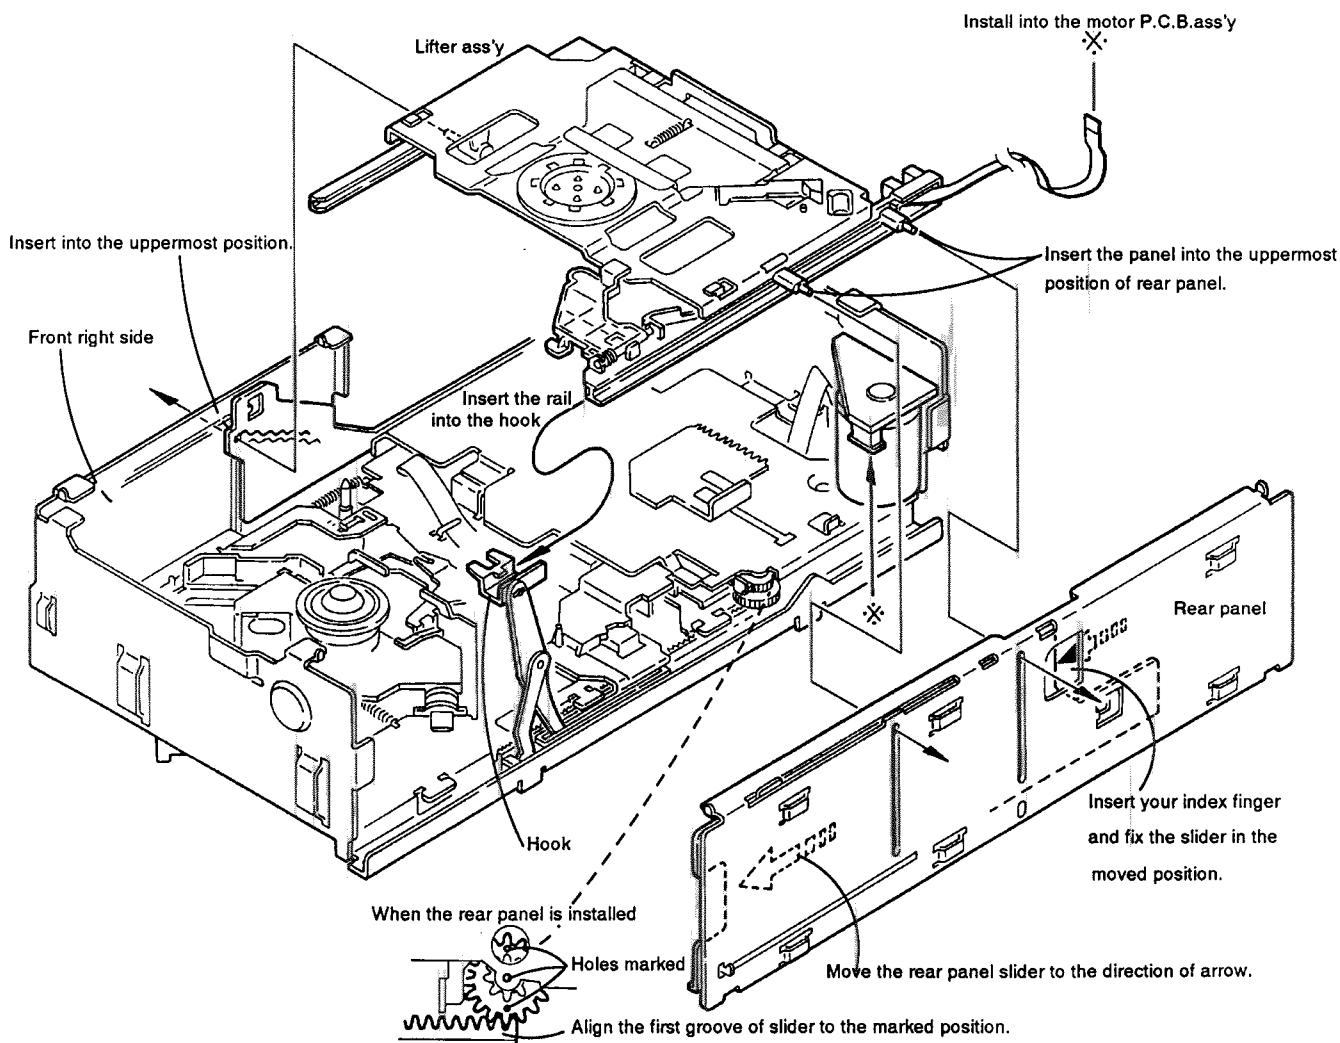

Fig. 2 – 17

### 3 Main adjustment

#### ■ Main adjustment instruments

- ◆ Oscilloscope (Digital oscilloscope (100 MHz))
- ◆ Electronic voltage meter
- ◆ Digital test
- ◆ Tracking offset meter
- ◆ Pulse jitter meter

#### ■ CD measuring disc

- ◆ Standard test disc : JVC CTS-1000

or

: MTD-D1

#### ■ Adjustment position view

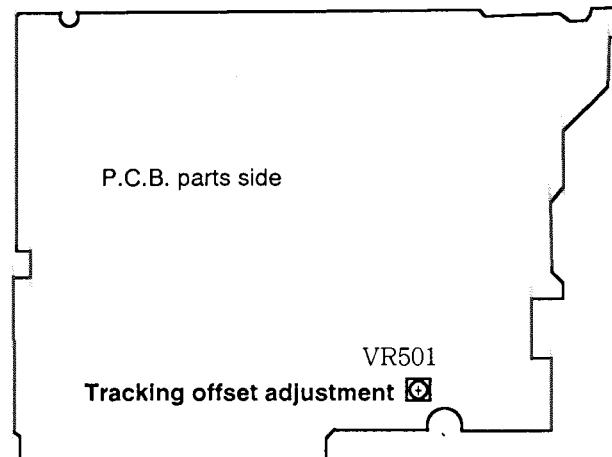

Fig. 3 - 1

#### ■ P.C.B. test point view(pattern side)

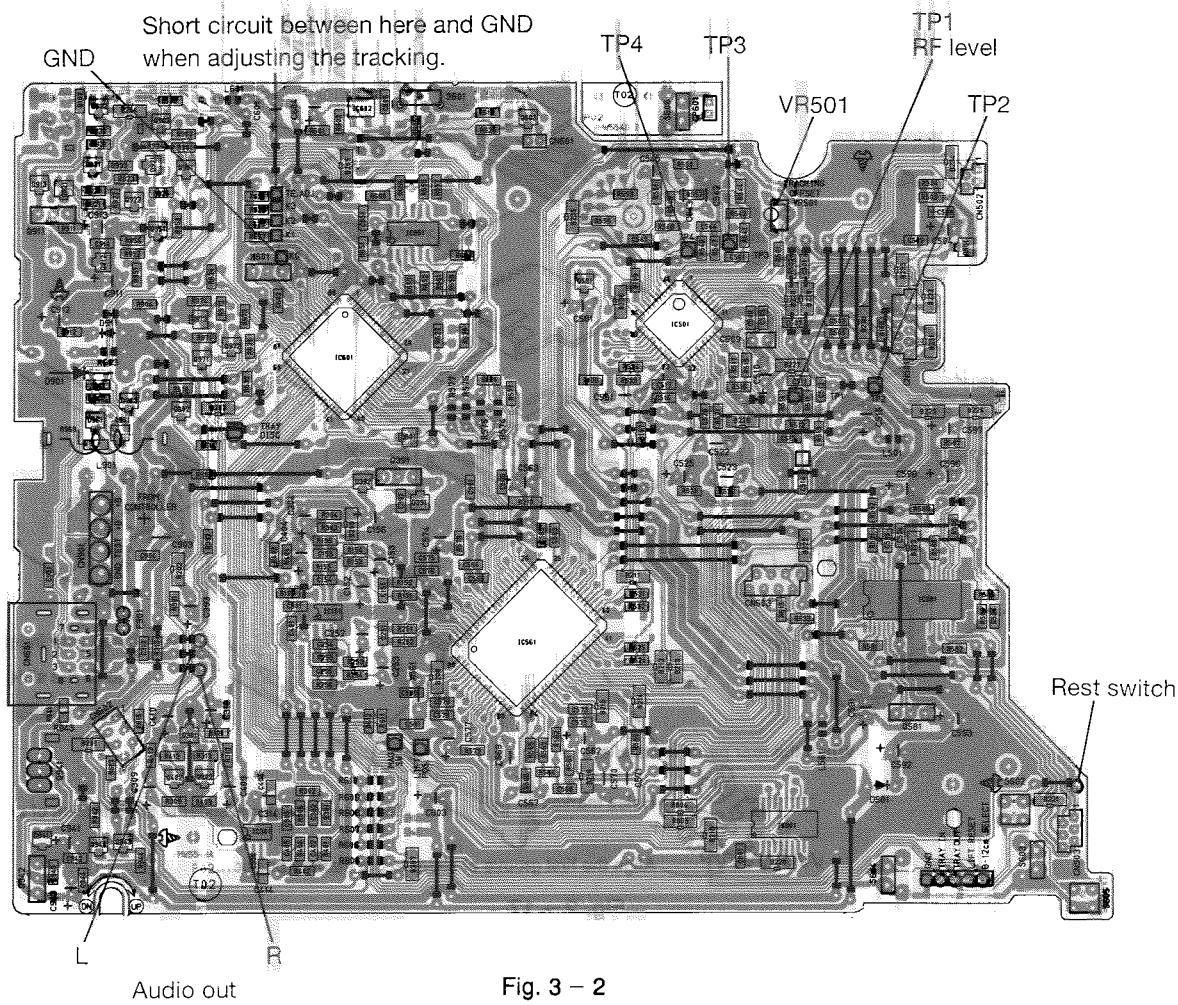

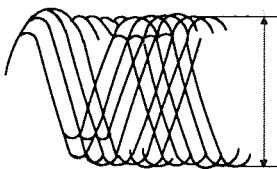

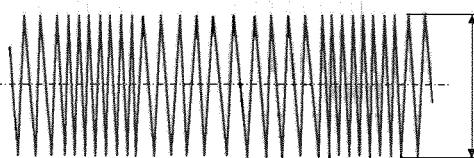

Fig. 3 - 2

Items	Conditions	Adjustment and Confirmation procedure	Standard Value	Adjusting
1. Jitter check	Measuring instrument Oscilloscope Test point TP1: Hot side TP2: GND side	Connect the jitter meter between TP1 and TP2 and when test disc (track 1) is played, confirm that the meter reading is 26n-sec or less.	26n- sec or less	
2. RF level (eye pattern) check	Measuring instrument Oscilloscope	Connect the oscilloscope between TP1 and TP2 and when test disc (track 1) is played, confirm that peak-to-peak value of oscilloscope waveform is within 1.2V +0.3V.  Eye-pattern waveform	within 1.2V +0.3V.	
		 The maximum value of this waveform should be in the range of specifications and the waveform should be clear		
3. Tracking offset adjustment	Measuring instrument Oscilloscope	1. Connect the oscilloscope between TP2 and TP3. 2. Play test disc (track 1). 3. Short circuit between TP4 and TP2 during CD play. 4. Connect pin 79 (TP:TE ADJ) of IC601 ((microprocessor) to the GND. 5. Adjust VR501 so that the waveform is vertically symmetrical with respect to zero level. (Use a direct coupling oscilloscope input.)  Tracking offset waveform	Set the center value of waveform to the zero level.	VR501
		 Set the center of P-P to the zero level		
4. Play output level checking	Measuring equipment Electronic voltage meter	When test disc (track 1) is played, check that the output level is 1.45V +0.3V (with 20-kohm load).	1.45V ± 0.3V	
5. Outermost circumference		Directly access the outer circumference track 31, check that play is performed normally and that abnormalities including sound skipping do not occur.		
6. Operation checking from outer to inner circumference		Skip from the outer circumference track to track 1 and check the time until play starts. Normally it is less than 10 seconds.	Less than 10 seconds

**KD-MK66 repair method for error indication**

<b>Error indication</b>	<b>Repair method</b>
◆ E1: Eject error	<p>The magazine cannot be ejected until S701 (magazine SW) is switched off. Can the magazine be ejected? OK →①, NG →②</p> <p>① Even when the magazine is ejected completely, magazine SW S701 is not switched off.</p> <p>② Check if the magazine is caught by the mechanism.</p>
◆ E2: Lifter motor error	<p>The lifter does not come up or down when changing a disc or ejecting the magazine. After resetting, does the lifter move? OK →③, NG →④</p> <p>③ When the lifter passes through the required disc position, check the lift position input (IC601 pin 44 to Q701). When the lifter does not reach the required disc position, check the mechanism (mainly lifting mechanism).</p> <p>④ Check if the drive voltage is applied to the motor terminal. If the voltage is applied, check the lifting mechanism. If not, separate the motor from the circuit and check again if the voltage is applied. When the voltage is applied, check that the lift motor's armature resistance (resistance across the motor terminals) is about 12 ohms. If it is extremely low, the motor is defective.</p>
◆ E3: Tray motor error	<p>Does error occur when the disc is pulled out from the magazine? Or does it occur when the disc is returned to the magazine? If it occurs when the disc is pulled out, check if the MAG SW and TRAY OUT SW are set to ON. If it occurs when the disc is returned, check as follows. Does the mechanism operate to return the required tray? OK →⑤ NG →⑥, ⑦</p> <p>⑤ Is a signal input to the TRAY IN input (IC601 pin 54)? (L when the tray is returned.) If no signal is input, check the pattern and SW.</p> <p>⑥ When the lifter stops at the desired disc position, is the voltage applied to the tray motor terminal? When the voltage is applied, check the tray return mechanism. If not, check the motor driver, computer - controlled line and tray motor's armature resistance (about 20 ohms).</p> <p>⑦ When the lifter does not reach the desired disc position, check the TRAY/DISC sensor.</p>
◆ E4: Pickup return error	<p>When ejecting, does the feed return the inside periphery? OK →⑧ NG →⑨, ⑩</p> <p>⑧ Check the Rest SW.</p> <p>⑨ If the feed gear turns, check the feed mechanism.</p> <p>⑩ If the feed gear does not turn, check the motor driver and pattern.</p>

# CD CHANGER CONTROLLER SECTION

COMPACT  
**DISC**  
DIGITAL AUDIO

# ■ Instructions (Extracts)

## FEATURES

- 3-way receiver interface (1. Antenna input, 2. AUX terminal, 3. Cassette adapter)
- The KS-RF20 converts the line out signal from a CD changer to FM signals (88.7 MHz or 89.1 MHz) which are supplied to a receiver's antenna (aerial) terminal. It allows connection of a CD changer to a cassette car receiver, etc. without line in terminals for the connection of a CD changer. These signals are received by the FM tuner of the cassette car receiver, etc. and the CD sound is reproduced.
- Since the KS-RF20 has a line-out terminal, it can be connected to a cassette car receiver with a line-in or AUX terminal, and also via a cassette adapter.

## SPECIFICATIONS

### FM MODULATOR BOX SECTION

Selectable output frequency : 88.7 MHz/89.1 MHz  
Line-Output Level/Impedance : 1.5 V/1 kΩ

### GENERAL

#### Power Requirements

Operating Voltage : DC 14.4 V (11 V - 16 V allowable)

#### Grounding System : Negative Ground

#### Dimensions (W x H x D)

FM modulator box : 112 x 28 x 75 mm  
(4-7/16" x 1-1/8" x 3")  
Display unit : 88 x 38 x 17 mm  
(3-1/2" x 1-1/2" x 11/16")  
Remote Controller : 60 x 98 x 17 mm  
(2-3/8" x 3-7/8" x 11/16")

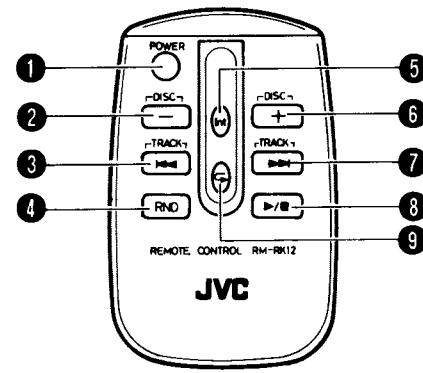

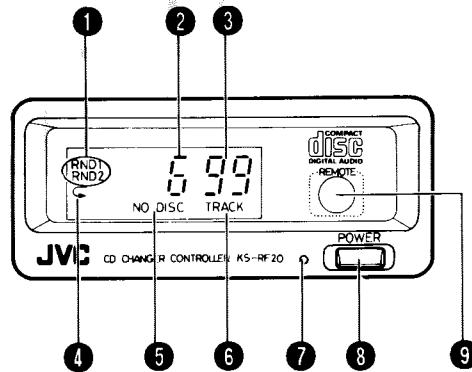

#### Net Weight

FM modulator box : 300 g (0.67 lbs)  
Display unit : 105 g (0.24 lbs)  
Remote Controller : 60 g (0.14 lbs) (with batteries)

Design and specifications subject to change without notice.

If a kit is necessary for your car, consult your telephone directory for the nearest car audio speciality shop.

## LOCATION OF CONTROLS

### (Display unit)

- 1 Random play indicator (RND1, RND2)
- 2 Disc number indicator (1 - 18)
- 3 Track number indicator (1 - 99)
- 4 Repeat playback indicator (↔)
- 5 DISC indicator
- 6 TRACK indicator
- 7 Microcomputer reset button
- 8 POWER button

Make sure that the unit is switched ON when the microcomputer reset button is pressed. (Since the power is switched OFF when the microcomputer reset button is pressed, press the POWER button again to switch ON the unit.)

### ⑨ REMOTE sensor section

#### (Remote control unit)

- 1 Power button
- 2 Disc select (-) button
- 3 Skip/Search (TRACK/◀▶) button
- 4 Random (RND) button
- 5 Intro (INT) button
- 6 Disc select (+) button
- 7 Skip/Search (TRACK/▶▶) button
- 8 Play (▶)/Stop (■) button
- 9 Repeat (↔) button

- Installing batteries in the remote control unit.

## ELECTRICAL CONNECTIONS

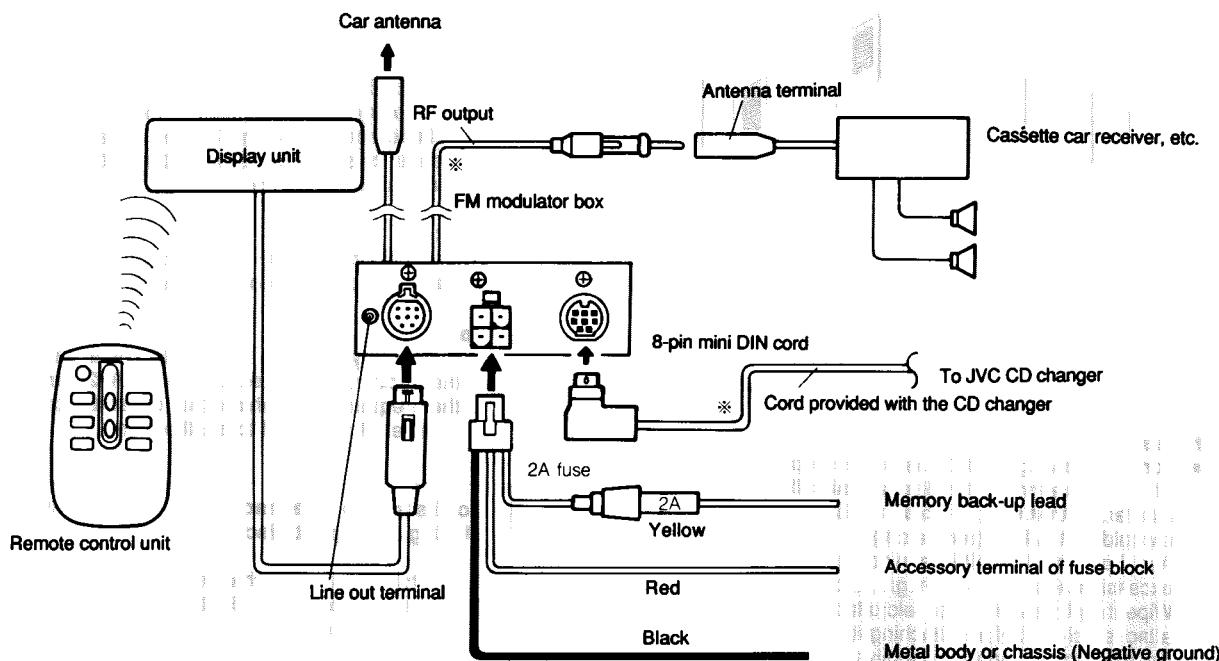

To prevent short circuits from occurring, while making connections, keep the battery's negative terminal disconnected. We recommend that you make all electrical connections (see Fig. b) before installing the unit. If you're not sure of your ability to install this unit correctly, have it installed by a qualified service technician.

### Note:

This unit is designed for use in cars with a 12-volt DC, negative ground power supply. If your vehicle does not have a 12-volt negative ground electrical system, you will need a voltage inverter which can be bought from a JVC car audio dealer.

- Be sure to ground this unit to the car's chassis.

### A. Connections

### Microcomputer reset button

After completing installation and connection, press this button using the tip of a ball-point pen, etc. to reset the microcomputer. Normally do not use this button, however, press it when the power supply has been interrupted such as for replacement of the car's battery. Also press it when the built-in microcomputer does not operate normally due to noise, etc. and when this unit does not operate correctly when any of its buttons is pressed.

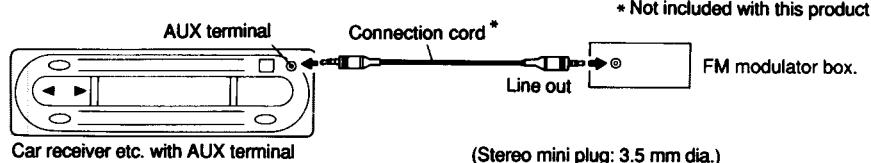

### B. Memory back-up lead

Connect this lead to a position where live power is supplied even when the ignition key is taken out.

### C. Line-out terminal

- This terminal can be used to connect with the line-in or AUX terminal of a cassette car receiver. It is also used for the connection of a cassette adaptor.

(The example shows a KS-RF20 being connected to a car receiver via the AUX terminal)

## INSTALLATION

The display unit can be installed separately from the FM modulator box, for ease of operation.

- **Installing the FM modulator box**

Install under the seat or the like, avoiding the car's heater vents.

**Note:**

When the installation position has been determined, confirm that the cords are sufficiently long.

- **Installing the display unit**

Install as shown in Fig. a on a flat surface (dashboard, console, etc.) where it can be attached securely and where it can be operated easily, using Velcro tape.

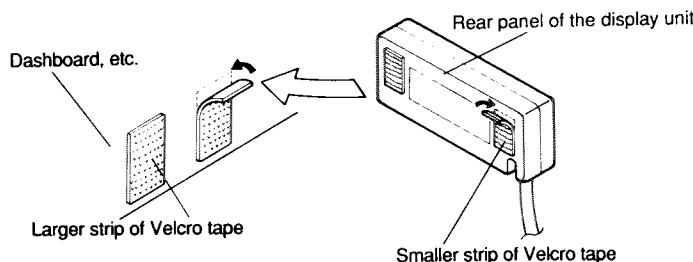

Fig. a

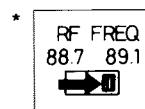

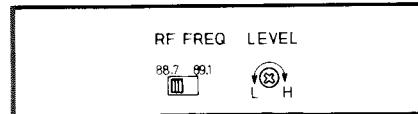

**Notes:**

- For safe driving, install the unit in a place where operation of the display unit will not interfere with driving. (Avoid installing where it would be too high (roof, etc.).)
- Avoid placing the unit in a place subject to excessive heat, direct sunlight, etc.
- Wipe the place where the Velcro tape is to be attached clean before attaching it.
- Do not drop or apply excessive shocks to the unit.
- Do not disassemble the unit.

## PLAYING COMPACT DISCS

1. Switch ON the display unit of the KS-RF20.
2. Switch ON the cassette car receiver, etc.
3. Select the FM band.
4. Tune to 88.7 MHz\*.
5. Play a compact disc.
6. Adjust the volume and tone as required.

\* When the sound is distorted or noise can be heard during CD playback, switch the frequency selector on the KS-RF20 to 89.1 MHz. When you do this, tune the cassette car receiver, etc. to 89.1 MHz.

RF frequency selector

RF LEVEL control

\*\* RF LEVEL control

The volume can be adjusted using the LEVEL volume control during CD play. When high-frequency sound is distorted during CD play, turn down the volume.

**Note:**

When adjusting the RF LEVEL control, do not press too hard to prevent damage to the unit.

**Note:**

- Before playing a CD, be sure to check that the frequency selected on the KS-RF20 and the frequency to which the cassette car receiver etc. is tuned to are the same.

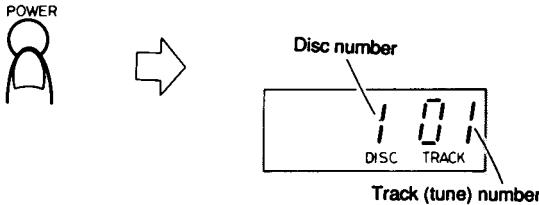

To listen to the radio (or tape) after playing a compact disc

1. Switch OFF the CD changer.
2. Tune to the required station (or play a cassette tape).

**Notes:**

1. When you want to listen to the radio, you must switch OFF the CD changer. Otherwise, noise may be generated and the broadcast may not be heard satisfactorily.
2. Lower the volume level before stopping disc playback, otherwise noise may be generated.
3. When the KS-RF20 is connected, tuner reception may be degraded to a certain extent.

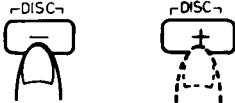

**To play all tracks (example: assuming 12 discs are loaded in the magazine)**

- ① Switch ON.  
The display window lights.  
CD play starts when the disc number and track number indicators light.
- ② Adjust the volume of the cassette car receiver to which the unit is connected.
- When all the tunes on the first disc have been played, the second disc starts automatically from the first tuned.
- To stop in the middle of a disc**  
During playback, press the **▶/■** button to stop play. The display shows **"/--"**. When pressed again, playback resumes from the point where it was interrupted.

### DISC SELECT BUTTON

During playback, press the DISC select button to listen to another compact disc.

- Example: When the third CD is currently playing...**  
Each time the (+) side is pressed, the 4th, 5th, 6th ... 12th and 1st disc ... will be selected in sequence.  
Each time the (-) side is pressed, the 2nd, 1st and 12th disc ... will be selected in sequence.  
(When this unit is connected to the XL-MG1800, disc selection is performed from the 1st disc to 18th disc to 17th disc ...)  
(When this unit is connected to the XL-MK500, disc selection is performed from the 1st disc to 6th disc to 5th disc...)

- During disc selection, the disc number and track number indicators blink.

### SKIP PLAYBACK

**To listen to the next tune ...**

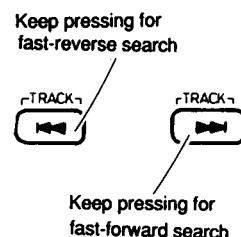

Press the **▶** button once to skip to the beginning of the next tune.

**To listen to the previous tune ...**

Press the **◀** button to skip to the beginning of the tune being played back and press again to skip to the beginning of the previous tune.

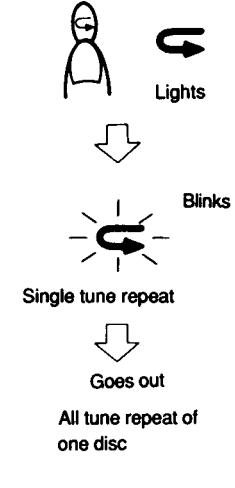

### SEARCH PLAYBACK (to locate the required position on the disc)

- The required position can be located using fast-forward or reverse search during playback.
- Hold down the button; search playback starts slowly and then gradually increases in speed.
- Since low-volume sound (about one quarter of the playback level) can be heard in both modes, release the button when the required position is located.

### REPEAT PLAYBACK

Press the **◀** button before or during playback. It is possible to perform the repeat playback of single tune or all tunes of one disc in the magazine. Each time the **◀** button is pressed, the repeat mode changes as follows.

#### ● Single tune repeat

The current or specified tune will be played back repeatedly.

#### ● All tune repeat of one disc

All tunes on the current or specified CD will be played back repeatedly.

### INTRO SCAN OPERATIONS

Use these functions to play back the first 15 seconds of tracks. (When this unit is connected to the KD-MK70) With intro scan operations, either the first 15 seconds of all tracks of all discs in the magazine are intro-scanned, or just the first track of all discs in the magazine. Each time the INT button is pressed, the mode changes from TRACK scan (for all tracks) to DISC scan (for the first tracks of each disc) to clear.

### TRACK scan: (Track No. blinks)

All tracks on all discs in the magazine are intro-scanned. When the required track is located, press the INT button two times to enter normal mode.

### DISC scan: (Disc No. blinks)

Only the first tracks on all discs in the magazine are intro-scanned. When the required disc is located, press the INT button once to enter normal play mode.

### RANDOM PLAYBACK

Each time the RND button is pressed, the mode is changed from the RND 1 mode to the RND 2 mode to the clear mode, in this order.

RND 1:

Plays all tunes on the disc currently being played back in random order.

RND 2:

Randomly play all the tunes on all the discs in the magazine.

- 1) Remove one screw ③A retaining the top cover.
- 2) Remove two screws ⑤ retaining the jacks respectively.
- 3) Remove one screw ③B retaining the board.
- 4) Disconnect the controller cord from the case, and then raise the board.  
It is recommended to remove two screws ③ retaining the antenna for easy removing the board.

### 3 Main Adjustments

Item	Adjusting condition	Adjustment and Check Procedures	Standard value	Adjusting point
1. Transmission frequency	The set is activated. (Impress +14.4 V to the ACC memory of CP901 while turning on the power with the LCD controller.)	<p>1) Set the mode for Pause with the remote control unit.</p> <p>2) Connect the ANT. OUT cable to an Frequency Counter as shown in the figure below.</p> <p>On the occasion of poor sensitivity at the Frequency Counter, connect a booster.</p> <p>3) Tune the transmission frequency by adjusting T2.</p> <p>Set S1 to the L-ch and tune to 88.7 MHz, the frequency on the H-ch is set to 89.1 MHz. On the other hand, when the H-ch is set to 89.1 MHz first, the L-ch frequency is set to 88.7 MHz.</p>	<p>Transmission frequency: L-ch: 88.7 MHz H-ch: 89.1 MHz</p> <p>&lt; Wiring for measurement &gt;</p>	T2
2. Spurious (Antenna leak level)	The set is activated. (Impress +14.4 V to the ACC memory of CP901 while turning on the power with the LCD controller.)	<p>1) After wiring as shown above, activate the set and enter its mode to Pause with the remote control unit (antenna plug side).</p> <p>2) Adjust respective L values of air-core coils L1, L2, L3, L5 and L6 by opening and closing them.</p> <p>3) Change the inclination of L1 to adjust the spurious level of the FM band. (Adjustment of inclination of L1 affects on antenna leak level.)</p> <p>4) Connect the ANT. socket with the spectrum analyzer, and confirm that the antenna leak level is within the allowance of the specifications. If not, repeat the step 3) with care of the spurious.</p> <p>5) After adjustment of the spurious and antenna leak level, repeat the step 1).</p>	<p>Inclination of L1</p> <p>&lt; Wiring for measurement &gt;</p>	
3. Pilot FM deviation		<p>1) After wiring as shown above, narrow the range of the spectrum analyzer to obtain such a waveform as shown below. [Example] (with MS62B spectrum analyzer)</p> <ul style="list-style-type: none"> <li>• Vertical scale: 5 dB/div.      • Band width: 3 kHz</li> <li>• Scan width: 10 kHz/div.      • Scan time: 2 ms/div.</li> </ul> <p>2) Set the output difference between the spectrum of the center frequency and the spectrum whose frequency is 19 kHz apart from the former to -14 dB.</p> <p>Conversion equation between pilot FM deviation and output difference is as follows.</p> $f = 19 \times \log^{-1}\{(6 - X)/20\} \text{ kHz.}$	<p>Output difference: -14 dB</p> <p>&lt; Wiring for measurement &gt;</p>	—

Item	Adjusting condition	Adjustment and Check Procedures	Standard value	Adjusting point
4. Stereo separation		<p>1) After wiring as shown above, activate the set and enter its mode to Pause with the remote control unit.</p> <p>2) Insert a 30 kHz L.P.F. between the audio analyzer and the set.</p> <p>3) Impress 300 mVrms (approx. -14.3 dBm with 600 Ω terminator) to L-ch of CP902 and measure the level difference of the demodulation output.</p> <p>4) With the same input, adjust the level difference of the R-ch demodulation output to 35 dB approx.</p> <p>5) Impress 300 mVrms to R-ch of CP902 and measure the level difference of the demodulation output.</p> <p>6) With the same input, confirm that the level difference of the L-ch demodulation output is 30 dB or more. If not, repeat the adjustment from the step 3).</p>	<p>Level difference of demodulation output on R-ch: 35 dB approx.</p> <p>Level difference of demodulation output on L-ch: 30 dB approx.</p> <p>&lt;Wiring for measurement&gt;</p> <pre>     graph LR       OA[Audio analyzer (Matsushita VP-7721A)] -- Input --&gt; KS[KS-RF20]       KS -- OSC output --&gt; T[Antenna]       KS -- L.R. Audio output --&gt; TU[Tuner (JVC FX-EV7)]       TU -- Antenna --&gt; L[Antenna]       L --&gt; L_R[Audio output]   </pre>
