M3LXU/M3XU CHASSIS

27CX6B/C756  
27CX5B/C755  
27CX25B/C750  
20SA3B/C053

R/C: CLU-415UI  
CLU-414UI  
CLU-412U

**CAUTION:** Before servicing this chassis, it is important that the service technician read the "Safety Precautions" and "Product Safety Notices" in this Service Manual.

This television receiver will display television Closed Captioning ( CC or ) in accordance with paragraph 15.119 of the FCC rules.

## SOLID STATE COLOR TELEVISION

SEPTEMBER 1995

HHEA - MANUFACTURING DIVISION

## SAFETY PRECAUTIONS

**NOTICE:** Comply with all cautions and safety related notes located on or inside the cabinet and on the chassis or picture tube.

**WARNING:** Since the chassis of this receiver is connected to one side of the AC power supply during operation, whenever the receiver is plugged in, service should not be attempted by anyone unfamiliar with the precautions necessary when working on this type of receiver.

The following precautions should be observed:

1. Do not install, remove, or handle the picture tube in any manner unless shatterproof goggles are worn. People not so equipped should be kept away from the picture tube while handling.
2. When service is required, an isolation transformer should be inserted between power line and the receiver before any service is performed on a "HOT" chassis receiver.
3. When replacing a chassis in the receiver, all the protective devices must be put back in place, such as barriers, nonmetallic knobs, adjustment and compartment covers, isolation resistors, capacitors, etc.
4. When service is required, observe the original lead dress in the high voltage circuitry area.
5. Always use the manufacturer's replacement components. Critical components as indicated on the circuit diagram should not be replaced by another manufacturer's. Furthermore, where a short circuit has occurred, replace those components that indicate evidence of overheating.
6. Before returning a serviced receiver to the customer, the service technician must thoroughly test the unit to be certain that it is completely safe to operate without danger of electrical shock, and be sure that no protective device built into the receiver by the manufacturer has become defective, or inadvertently defeated during servicing.

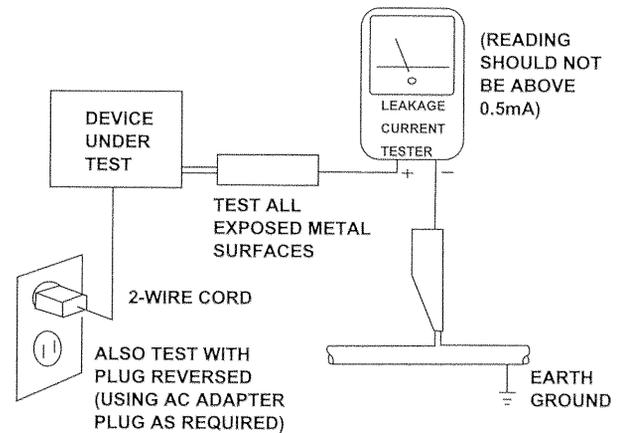

Therefore, the following checks should be performed for the continued protection of the customer and service technician.

### Leakage Current Cold Check

With the AC plug removed from the 120V AC 60Hz source, place a jumper across the two plug prongs. Turn the AC power switch ON using an insulation tester (DC500V), connect one lead to the jumpered AC plug and touch the other lead to each exposed metal part (antennas, screwheads, metal overlays, control shafts, etc.), particularly any exposed metal part having a return path to the chassis should have a minimum resistor reading of 0.24MΩ and a maximum resistor reading of 5.2MΩ. Any resistance value below or above this range indicates an abnormality which requires corrective action. Exposed metal part not having a return path to the chassis will indicate an open circuit.

### Leakage Current Hot Check

Plug the AC line cord directly into an AC 120V 60Hz outlet (do not use an isolation transformer for this check). Turn the AC power ON. Using a "leakage Current Tester (Simpson's Model 229 or equivalent)", measure for current from all exposed metal parts of the cabinet (antennas, screwheads, overlays, control shafts, etc.) particularly any exposed metal part having a return path to the chassis or to a known earth ground (water pipe, conduit, etc.). Any current measured must not exceed 0.5mA.

### AC LEAKAGE TEST

**ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE RECEIVER TO THE CUSTOMER.**

#### High Voltage

This receiver is provided with a hold down circuit for clearly indicating that voltage has increased in excess of a predetermined value. Comply with all notes described in this Service Manual regarding this hold down circuit when servicing, so that this hold down circuit is operated correctly.

#### Serviceman Warning

With minimum BRIGHTNESS and CONTRAST, the operating high voltage in this receiver is lower than 34.0kV. In case any component having influence on the high voltage is replaced, confirm that high voltage with minimum BRIGHTNESS and CONTRAST is lower than 34.0kV. To measure high voltage use a high impedance High Voltage Meter. Connect (-) to chassis earth and (+) to the CPT Anode button (See the following connection diagram).

**NOTE:** Turn the power switch OFF without fail before the connection to the Anode button is made.

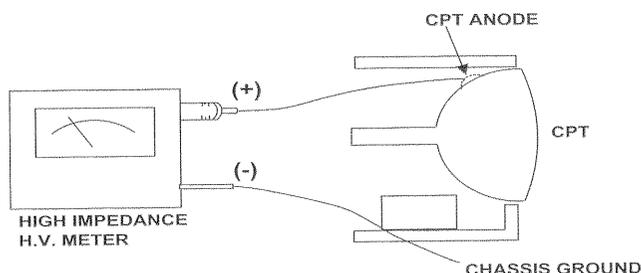

## PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in HITACHI television receivers have special safety related characteristics. These are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacements parts which have these special safety characteristics are identified in this Model Service Manual.

Electrical components having such features are identified with an  $\triangle$  mark in the schematics and parts list in this Model Service Manual.

The use of a substitute replacement component which does not have the same safety characteristics as the HITACHI recommended replacement one, shown in the parts list in this Model Service Manual, may create shock, fire, X-Radiation, or other hazards.

Production Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current HITACHI Service Manual. A subscription to, or additional copies of HITACHI Service Manual may be obtained at a nominal charge from HITACHI SALES CORPORATION.

### X-Radiation

**TUBE:** The primary source of X-Radiation in this receiver is the picture tube. The tube utilized in this chassis is specially constructed to limit X-Radiation emission. For continued X-Radiation protection, the replacement tube must be the same type as the original HITACHI approved type.

When troubleshooting and making test measurements in a receiver with an excessive high voltage problem, avoid coming unnecessarily close to the picture tube and the high voltage component.

Do not operate the chassis longer than is necessary to locate the cause of the excessive voltage.

This Service Manual is intended for qualified service technicians; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual. Improperly performed repairs can adversely affect the product and its safety. Consumers should not risk trying to do the necessary repairs and should instead refer to a qualified service technician.

### WARNING

Lead in solder used in this product is listed by the California Health and Welfare agency as a known reproductive toxicant which may cause birth defects or other reproductive harm (California Health and Safety Code, Section 25249.5).

When servicing or handling circuit boards and other components with lead in solder, avoid unprotected skin contact with the solder. Also, when soldering do not inhale any smoke or fumes produced.

## SAFETY NOTICE USE ISOLATION TRANSFORMER WHEN SERVICING

Components having special safety characteristics are identified by  $\triangle$  on the parts list in this Model Service Manual and its supplements and bulletins. Before servicing this, it is important that the service technician read and follow the "Safety Precautions" and the "Product Safety Notices" in this Service Manual.

For continued X-Radiation protection, replace picture tube with original type or Hitachi equivalent type.

### POWER SOURCE

This television receiver is designed to operate on 120 Volts/60Hz, AC house current. Insert the power cord into a 120 Volts/60Hz outlet.

**NEVER CONNECT THE TV TO OTHER THAN THE SPECIFIED VOLTAGE OR TO DIRECT CURRENT.**

**TECHNICAL SPECIFICATIONS**

**POWER RATINGS**

27CX6B/C756 .....	145 watts
27CX5B/C755 .....	145 watts
27CX25B/C750 .....	145 watts
20SA3B/C053 .....	108 watts

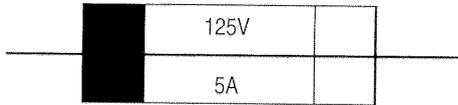

**COLOR PICTURE TUBE**

27CX6B/C756.....	A68KRQ58X(D)
27CX5B/C755.....	A68ADT25X02
27CX25B/C750.....	A68ADT25X02
20SA3B/C053.....	A51KQN61X

**CAUTION**

The following symbol near the fuse indicates fast operating fuse (to be replaced). Fuse ratings appear within the symbol.  
Example:

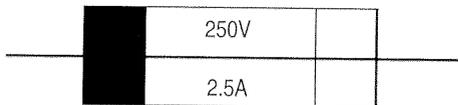

27V Model

F901

The rating of fuse F901 is 5.0A-125V.  
Replace with the same type fuse for continued protection against fire.

20V Model

F901

The rating of fuse F901 is 2.5A-250V.  
Replace with the same type fuse for continued protection against fire.

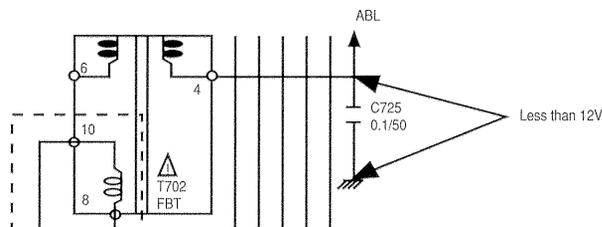

## TECHNICAL CAUTIONS

### 27CX5B, 27CX6B, 27CX25B

#### High voltage limiter circuit check and overvoltage protection circuit operation check.

#### Adjustment Preparation

1. Connect a high voltage voltmeter between CPT anode terminal (anode capside) and the ground.
2. Set AC Input voltage to  $120 \pm 3V$ .
3. Receive Circle Pattern and set "BRIGHTNESS" and "CONTRAST" to maximum. Adjust the Screen VR so that Beam Current is  $1B \pm 0.1 \text{ mA}$ . (The voltage of ABL terminal -C725 both ends should be 12V or less)
4. Connect R831 (Q804 collector side) to GND.

#### Adjustment Procedure

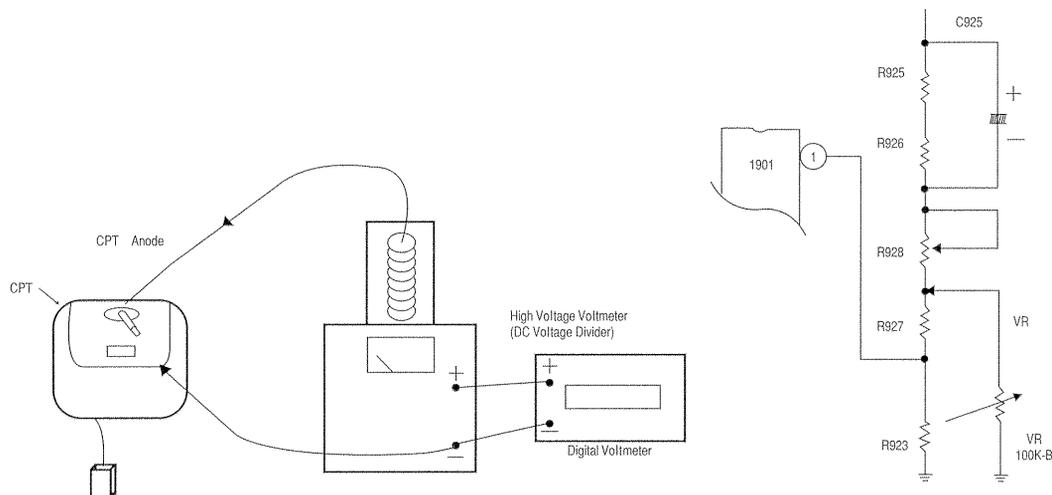

1. Check that the normal high voltage and +B voltage.

CHASSIS	E HT $\pm 1 \text{ KV}$	I B $\pm 0.1 \text{ mA}$	+B $\pm 0.3V$	E1 $\pm 1.2 \text{ KV}$
C755/C756	27.5 KV	1.5 mA	96.0 V	32.5 KV
C750	27.5 KV	1.5 mA	96.0 V	32.5 KV

#### Adjustment Preparation

5. Set AC input voltage to  $120 \pm 3V$ . Then, connect the VR (100K-B) to R925 and ground side as shown below.

**Note:** At that time the value of VR should be maximum.

#### Adjustment Procedure

2. Keep CONTRAST, BRIGHTNESS, and SCREEN VR as in item (3). Reduce the VR value gradually, and check that the picture disappears when high voltage is E1. Immediately after checking that it disappears, turn off the set switch. Remove the VR and high voltage voltmeter. When connecting or removing high voltage voltmeter to or from anode cap, be sure to turn off the CTV. Also, be sure to perform it after the chassis discharge of residual high voltage, because the high voltage of CPT anode may be left.

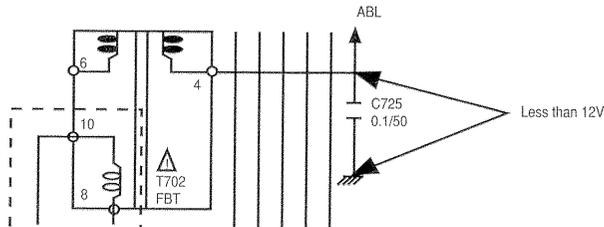

## TECHNICAL CAUTIONS

### 20SA3B ONLY

#### High voltage limiter circuit operation check and overvoltage protection circuit operation check

##### Adjustment Preparation

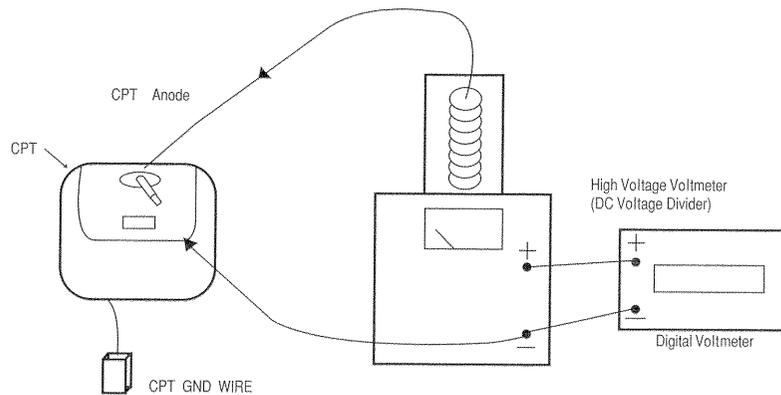

1. Connect a high voltage voltmeter between CPT anode terminal (anode capside) and the ground.
2. Set AC input voltage to  $120 \pm 3V$ .
3. Receive Circle Pattern and set "BRIGHTNESS" and "CONTRAST" to maximum. Adjust SCREEN VR so that Beam Current is  $IB \pm 0.1 \text{ mA}$ . (The voltage of ABL terminal -C725 both ends should be 12V or less)

##### Adjustment Procedure

1. Check that the normal high voltage EHT.

CHASSIS	EHT $\pm 1KV$	IB $\pm 0.1mA$	E1 $\pm 1.2 KV$
C053	27.0 KV	1.1 mA	30.5 KV

##### Adjustment Preparation

4. Turn the power ON and receive circle pattern signal. Set CONTRAST and BRIGHTNESS to maximum and the others to the normal (RESET) condition.
5. Turn the power OFF and short circuit both ends of R906 with a jumper wire.
6. Adjust the slidac so that the input power voltage of the TV set is  $100 \pm 5V$ .
7. Turn the power ON and increase the input power voltage gradually while adjusting the slidac. Check the indicated value with a high voltage voltmeter and see picture condition.
8. While continuing the above operation, read the operating voltage of X-ray protection circuit E1.
9. When X-ray protection circuit operates, set the input power voltage to zero using the slidac and remove the jumper wire and the high voltage voltmeter.

Refer to CHASSIS SERVICE MANUAL PA NO. 0051 for additional technical information.

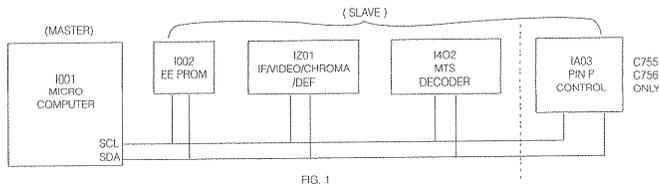

**Note:**

1. MAIN CHASSIS ADJUSTMENT is done with precision equipment. Readjustment is only recommended if the service technician replaced a defective component related to the circuit.
2. COMMON SERVICE ADJUSTMENT is recommended for the service technician after final troubleshooting and repair is done. Quick check and fine tuning is advisable to verify that the problem is eliminated.

I. MAIN CHASSIS ADJUSTMENT

1. I<sup>2</sup>C BUS SYSTEM

M3LXU (M3XU) Chassis uses I<sup>2</sup>C Bus Control System. Fig. 1 shows this control system.

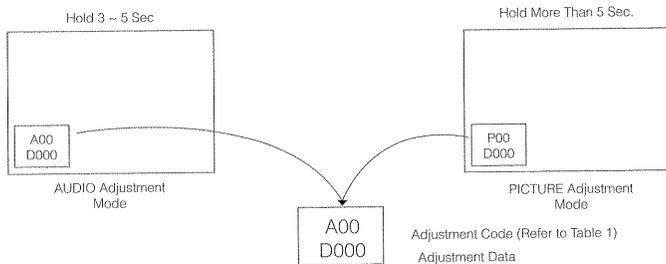

I001 (Master) controls other ICs (slave). Adjustment data is memorized in I002 (EEPROM). I001 read this data and controls other ICs.

Adjustment items applied in this chassis is shown in Table 1.

2. ADJUSTMENT PROCEDURE—START UP

2-1 How to Get to Adjustment Mode

Chassis adjustment can be done using customers remo-con with CTV set turned off, press "POWER" and "MENU" or "AVX" keys at the same time, and hold more than 3 seconds. The CTV set turns on in adjustment mode with OSD as follows.

"To Escape from Adjustment Mode"  
Press "POWER" key or "POWER" button of remo-con once at any time. Then set returns to normal state.

TABLE 1 ADJUSTMENT CODE

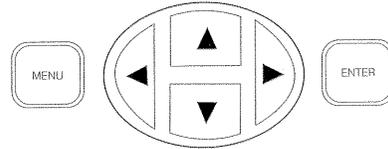

CODE NAME	ADJUSTMENT MODE	(ITEM) REMARK	SERVICE* MODE DATA
A 00	Audio Adj. Key Code	—	—
A 01	STEREO VCO Adj.	4.3	027
A 02	SAP VCO Adj.	4.6	030
A 03	Filter Adj.	4.4	026
A 04	Input Level Adj.	4.2	009
A 05	Separation (Low) Adj.	4.5	032
A 06	Separation (High) Adj.	4.5	022
P 00	Picture Adj. Key Code	—	—
P 01	PIF VCO Adj.	4.1	063
P 02	RF AGC Adj.	4.11	044
P 03	Horiz. (Phase) Position Adj.	4.8	019
P 04	Vert. (Center) Position Adj.	4.8	001
P 05	Vertical Size Adj.	4.8	030
P 06	R-BKG Cut Off Adj.	4.7-4.9	157
P 07	G-BKG Cut Off Adj.	4.7-4.9	179
P 08	B-BKG Cut Off Adj.	4.7-4.9	132

P 12	Sub Color Adj.	—	000
P 13	Sub Tint Adj.	4.12	-010
P 14	Sub Sharpness Adj.	4.13	004

\* This data is an approximate service mode data. Fine adjustment must be done using the specified test procedure and adjustment tools.

2-2 Changing Data and Adjustment Code

When set is in adjustment mode, the cursor "◀, ▶, ▲, ▼" and 'ENTER' keys of the customers remo-con will be the adjustment keys.

A. By customer remote control

"▲, ▼" keys are used for changing adjustment code.

"◀, ▶" keys are used for changing data.

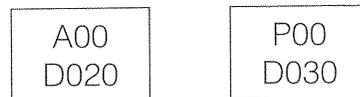

"ENTER" key is used for changing "Cut Off Mode+ Normal Mode". (Refer to cut off adjustment)

3. ADJUSTMENT MODE

If below display appears

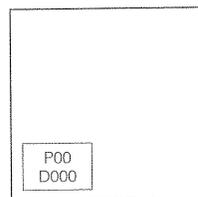

Adjustment code can not be changed by cursor "▲, ▼" keys.

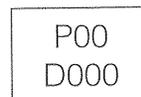

Set data "D020" at "A00" or "D030" at "P00" by "◀, ▶" keys. Then adjustment code can be changed by "▲, ▼" keys.

B. By Front Control Panel—Another Method

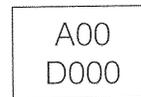

1. Before turning ON the set, press AVX. Then press POWER and keep pressing AVX for about 3 seconds.
2. After 3 seconds, a small square will appear on the left lower corner and there are two different displays. One shows A and D, and the other P and D for the picture adjustment.

D = Data value  
P = Picture  
A = Audio

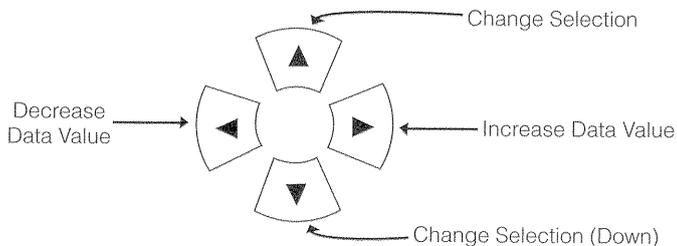

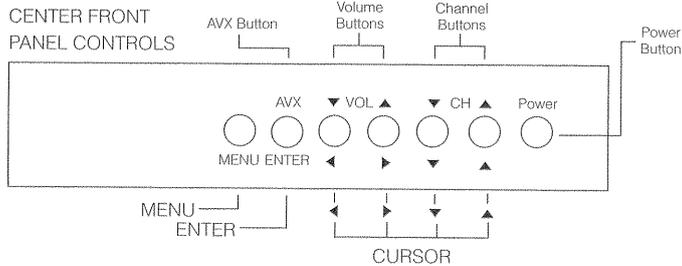

3. Since this adjustment is by control panel, the P and D has a value of zero. For the adjustment mode, first you have to input a data value of 30 and then you can select the other P options.

The same for the other adjustment of A and D for this adjustment you need an input value of 20 so you can select other options for A.

4. To make selection you have to use the arrow keys on the front control panel.

# M3LXU/M3XU

Match front panel control cursor to remote control cursor.

## 4. ADJUSTMENT PROCEDURE

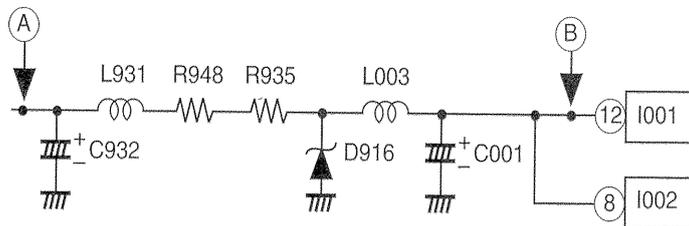

### 4-1 IF Adjustment

#### 4-1-1 PIF AFC Adjustment

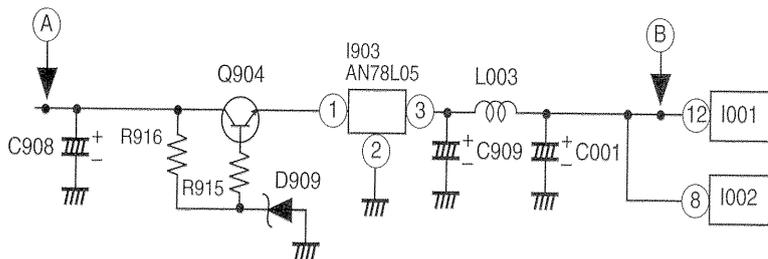

##### Adjustment Preparation

- Initial setting of EEPROM (I002)  
Add +15V to point A and after 5 seconds check point B if it is  $5V \pm 0.3V$ .

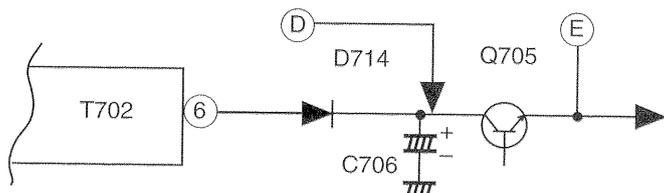

a. M3LXU Chassis

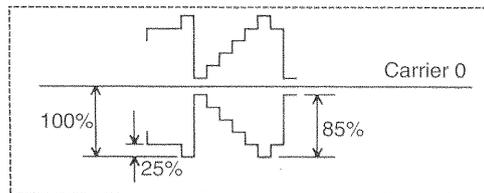

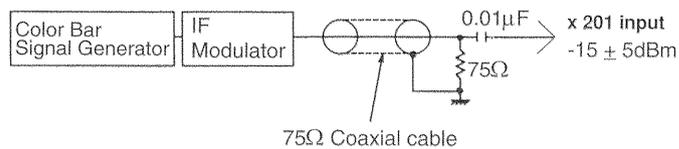

b. M3XU Chassis

- Add +11V at (D) point and check (E) point is  $9V \pm 0.3$ .

- Input signal between X201 input and earth.  
(Tuner IF output)

- Connect DC voltmeter (input impedance 1M ohm or more) to I201 pin (44).

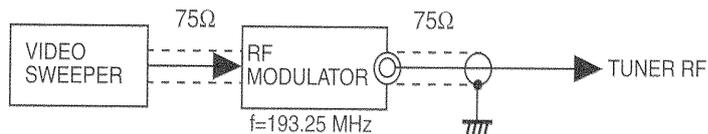

#### Adjustment Procedure

- Set adjustment code "P01".  
Change data so that the voltmeter is  $2.5 \pm 0.5V$  at I201 pin (44).

### 4-1-2 Adjustment of IF waveform

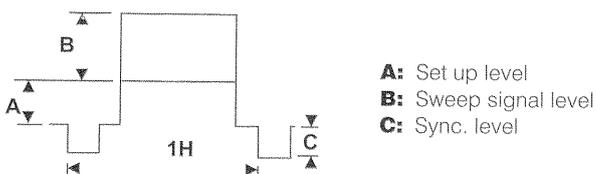

#### Adjustment Preparation

- Connect signal as follows
- Connect an oscilloscope to I201 Pin (47) (TP-12)

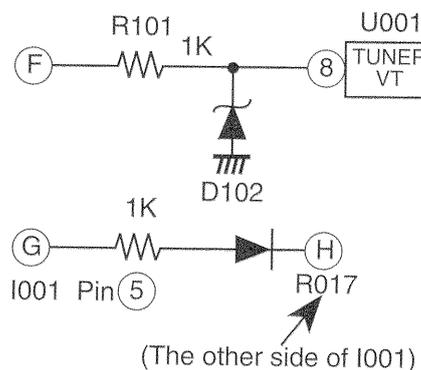

- Marks
- 0.2 MHz (10CH)
  - 1 MHz
  - 2 MHz
  - 3.6 MHz
- ( Output level  $91 \pm 3$  dB $\mu$  (50 $\Omega$  load)  
Modulation 90 ~70%

- Check the signal at TP-12 as follows

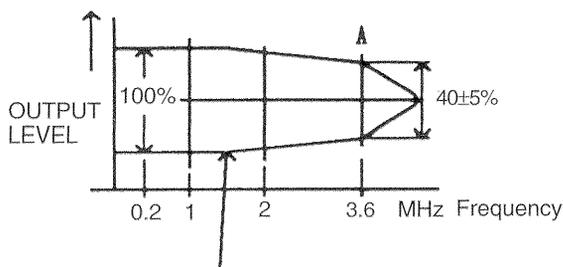

- Same as 4-1-1 (1).
- Same as 4-1-1 (2).
- Tuner VTi (F) POINT: 42V
- Connect a diode (IS2076, ISS270TA) to (G)~(H)
- Receive a color bar signal.

**Adjustment Procedure**

- Adjust tuner IFT coil so that the output level of 0.2MHz is reference level (100%) and 3.6MHz level is 40±5%. (At that time, do not turn tuner IFT coil more than 1 turn.)

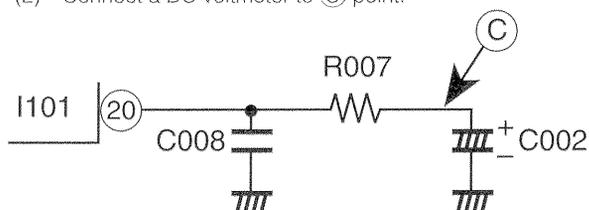

Check that 1MHz~2MHz level is 70%~100%

**4-1-3 VCO for OSD adjustment**

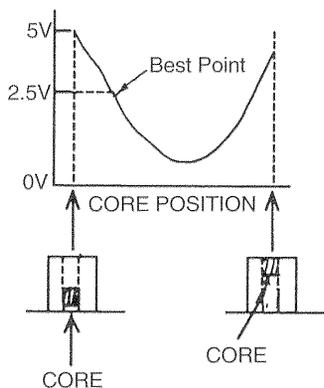

**Adjustment Preparation**

- Receive color bar or circle pattern signal.
- Connect a DC voltmeter to (C) point.

**Adjustment Procedure**

- Adjust L001 so that the voltmeter is 2.5±0.2V.

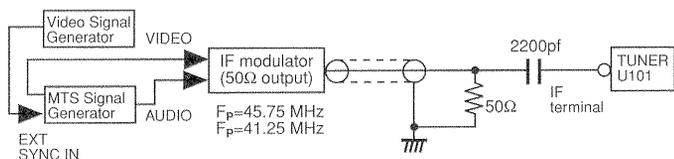

**4-2 MTS Adjustment**

**4-2-1 Input Level Adjustment**

**Adjustment Preparation**

- Apply a signal to tuner (U101) using the jig shown below.

**Note:** Video signal and audio signal should be synchronized.

**IF modulator output signal wave form**

(Color bar or all white)

IF modulator output level and P/S  
P=106dBu (50 ohm termination)  
S level: -3dB to P level  
At this time, S/N ratio of F/E  
video output is 45dB or less.

Sound modulation condition:

Noise reduction encoder: on

Stereo signal:

- R=0 (L only), 300 Hz, 30% modulation (see note)
- R=0 (L only), 3 KHz, 30% modulation (see note)

Monaural signal:

- Monaural, 40 Hz 100% modulation (PRE-EN OFF)

SAP signal:

- SAP, 300 Hz 30% modulation (see note)

**Adjustment Preparation**

- Connect AC voltmeter V to I402 pin (26). Use the AC voltmeter of matsushita made, model VP-950C or equivalent.
- Same as item 4-1-1 (2). (Apply +B to I201, I402). Refer to item 4-3.
- Same as item 4-1-1 (1)
- Select adjustment code "A04"

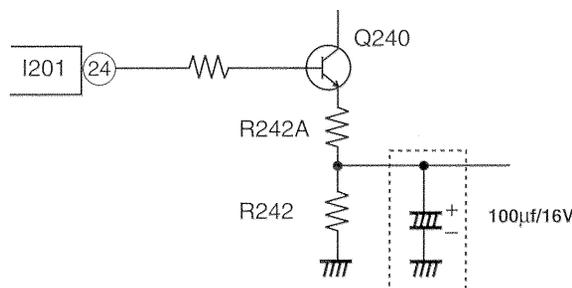

**Adjustment Procedure**

- Adjust the data "A04" to VO=sig 500m Vrms±10m Vrms at I402 pin (26).

**4-3 Stereo VCO Adjustment**

**Adjustment Preparation**

- Same as items 4-1-1 (1), (2), (4).
- Connect a frequency counter to I402 pin (26). Use the probe of 1:1. (Probe standard Ri≤1M ohm, Ci≤15pF)
- Input of I402 pin (7) is no signal.
- Select adjustment code "A01".
- Connect a capacitor (100µf/16V) as follows.

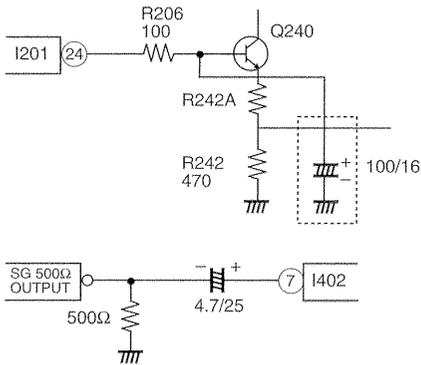

**Adjustment Procedure**

- Adjust the data to set to 15.73±0.1 KHz by "◀▶" keys.
- Delete capacitor (100µf/16V).

**4-4 Filter Adjustment**

**Adjustment Preparation**

- Set capacitor 100µF/16V as shown as follows.
- Apply the signal to I402 pin (7) with the jig shown as follows.

a) SG output signal spec.

① FREQUENCY

f = 15.73 KHz (sine wave)

② Signal Level

V = 100mVrms

(4) Connect an AC voltmeter or oscilloscope to I402 pin ②6.

(5) Select adjustment code "A03".

### Adjustment Procedure

(1) Adjust the data so that the voltage of I402 ②6 pin is minimum by "◀▶" keys.

## 4-5 Separation Adjustment

(The adjustment of items 4-2-1 and 4-4 must be completed first)

### Adjustment Preparation

- (1) Use the same jig as input level adjustment
- (2) Connect an AC voltage meter through AUDIO AMP. to I402 pin ②6 or connect an oscilloscope.
- (3) Select adjustment code "A06" and set data "D032".

### Adjustment Procedure

- (1) Select sound input signal ① and select adjustment code "A05" and adjust by "◀▶" keys so that 300Hz level is minimum (L separation adjustment)
- (2) Select sound input signal ② and select adjustment code "A06", and adjust by "◀▶" keys so that 3KHz level is minimum.
- (3) Repeat (1) and (2).  
Adjustment precision: within +1dB from minimum point.

## 4-6 SAP VCO Adjustment

### Adjustment Preparation

- (1) Connect a frequency counter to I402 pin ②6.
- (2) Select adjustment Code "A02".
- (3) Connect same jig in item 4-3.

### Adjustment Procedure

- (1) Adjust the data by "◀▶" keys so that frequency is  $78.67 \pm 0.5$  KHz.

## 4-7 Cut-Off Adjustment (Picture Adjustment)

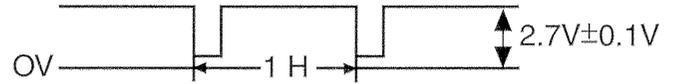

### Adjustment Preparation

- (1) Connect an oscilloscope at R, G, B output.
- (2) Receive circle pattern signal.

	I201
R output	pin ①9
G output	pin ②0
B output	pin ②1

### Adjustment Procedure

- (1) Select adjustment code "P06" and press "ENTER" button.
- (2) Adjust R cut-off data as that R output waveform should be followed by "◀▶" key.  
Adjustment for G and B are the same procedure as R cut-off adjustment. The only difference is the data for G cut-off is "P07" and B cut-off is "P08".

## 4-8 Deflection Circuit Picture Adjustment

### 4-8-1 Horizontal Center Adjustment

#### Adjustment Preparation

- (1) Apply heat-run 5 minutes or more after the power is turned on.
- (2) Receive circle pattern signal.
- (3) Set CONTRAST maximum and others center.

#### Adjustment Procedure

- (1) Adjust horizontal center so that difference of right and left size marker is within 0.5 by adjustment code "P03"

### 4-8-2 Vertical Size Adjustment

#### Adjustment Preparation

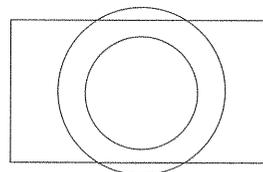

- (1) Apply heat-run 5 minutes or more after the power is turned on.
- (2) Receive circle pattern signal, and set CONTRAST maximum and others center.
- (3) The set should face the north or south direction.

#### Adjustment Procedure

- (1) Adjust vertical center and size so that the outer circle of the circle pattern is like the figure below by using "◀▶", ▲, ▼" keys.

	Adjustment Code
V Center	"P04"
V Size	"P05"

(i) Standard Condition

1/2 of the width of outer circle comes to the screen.

(ii) When the picture center is above CPT center at V center is minimum

When the picture center is above CPT center, adjust so that the bottom of the inner circle comes in contact with the TOP of the screen.

**4-9 White Balance Adjustment**

**Adjustment Preparation**

- (1) Apply heat-run 10 minutes or more after the power is turned on.
- (2) Check that the purity adjustment has been completed.
- (3) Set the vertical incident illumination on the CPT surface to 20 lux or less.
- (4) Receive white raster signal.
- (5) Set the color temperature control (white control) to warm.
- (6) Turn the screen adjusting VR fully counterclockwise.
- (7) Set adjustment mode "P06" and press "ENTER" button to set cut-off mode again. Press "ENTER" button to return to normal mode.

**Adjustment Procedure**

- (1) Turn the screen adjusting VR clockwise and set it to the position where the bright colored line starts appearing on CPT screen.
- (2) Do not change the cut-off data (this data is named "CODE-A") corresponding to the color first appearing.
- (3) Turn the screen fully clockwise adjusting VR when a bright color lines does not appear.
- (4) Adjust the cut-off data except Code-A so that the red, green and blue bright colored line appear on the screen equally by using "◀▶, ▲▼" key.
- (5) Set to normal mode by pressing "ENTER" key.
- (6) Adjust picture control so the indication of the brightness meter is 80% of the full scale. Then, change G and B data by using "◀▶" key and adjust the high-brightness white balance.
- (7) Adjust picture control to minimum and check that the low-brightness white balance is obtained by directly observing the low-brightness without using a mirror.
- (8) When the low brightness white balance is not obtained, adjust other low-brightness white balance code except Code-A and return to item (6).  
White balance color temperature setting 7,200° K
- (9) Set white control (color temperature control) to cool, and check that color temperature is approx. 9,300° K.

	Adjustment Code
R cut off	P06
G cut off	P07
B cut off	P08
G drive	P09
B drive	P10

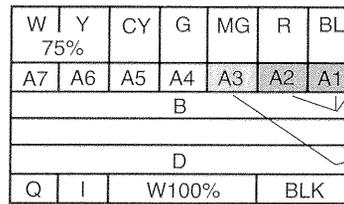

**4-10 Sub Black Level Adjustment**

**Adjustment Preparation**

- (1) Apply heat-run for 10 minutes or more after the power is turned on.
- (2) Receive color bar signal.
- (3) Set the vertical incident illumination on the CPT surface to 20 lux or less.
- (4) Set BRIGHTNESS control to the center position.
- (5) Set white control to WARM.
- (6) Set adjustment code "P11" by remo-con.

**Adjustment Procedure**

- (1) Adjust "DATA" by using "◀▶" keys. The background of A1, A2 set to black and A3 is set lighter black.

The background is set to black. Perform the adjustment without observing the boundary parts.

The background is set to lighter black.

- (2) Check by directly observing the CPT surface, without using a mirror.

**4-11 AGC Adjustments**

**Adjustment Preparation**

- (1) After all the adjustments are finished, heat-run 5 minutes or more in signal receiving condition.
- (2) Receive circle pattern signal.
- (3) Set PICTURE to MAXIMUM and BLACK LEVEL to on-screen display center.
- (4) Antenna input power: -53dBm
- (5) Connect DC voltmeter of internal resistance 1MΩ or more to TP15.
- (6) Set adjustment code "P02".

**Adjustment Procedure**

- (1) Adjust AGC data until the indication of DC voltmeter does not change any more at the maximum point. The reading of DC voltmeter is named V1. Adjust AGC data so that the indication of DC voltmeter is (V1-(0.5±0.2)V).

**4-12 Sub Tint Adjustment**

Set adjustment code "P13".  
Set data "-10" by "◀▶" keys. (27CX5B/C755, 27CX6B/C756, 28CX25B/C750)

**4-13 Sub Sharpness Adjustment**

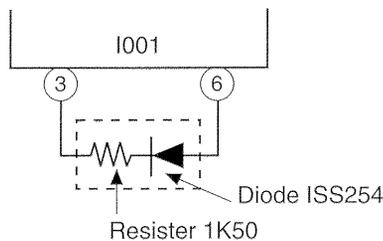

Set adjustment code "P14".  
Set data "004" by "◀▶" keys. (27CX5B/C755, 27CX6B/C756. 28CX25B/C750)

**II. FUNCTION SETTING**

M3LXU (M3XU) Chassis has the data for setting variety functions in EEPROM (I002).  
Microcomputer (I001) set the functions needed for each model according to EEPROM data (memory switch data).

**1. HOW TO SET MEMORY SWITCH SETTING MODE**

Connect a diode as follows at power on. (Continue connection)

An OSD will appear on screen as follows.

MEMORY SWITCH		
S - IN	0	1
SPATIALIZER	0	1
INT. SPEAKER	0	1
AUX 1	0	1
AUX 2	0	1
POWER 1	0	1
POWER 2	0	1
P IN P	0	1
MTS	0	1
SOUND	0	1
M PAL	0	1
COMB FILTER	0	1

Function name  
(Yellow background shows cursor position)

Data  
(Yellow background shows selected data)

Cursor and data are changed by "◀, ▶, ▲, ▼" button.  
After setting data, press "ENTER" button. Then MEMORY INITIALIZE operation start. After complete MEMORY INITIALIZATION, TIMER SOUND is outputted from left speaker.

**Note:** Press "MENU" to escape from setting mode.

## 2. EXPLANATION OF FUNCTIONS

- (1) S-IN  
Select S-Video mode or not.  
Data "1" ..... apply S-VIDEO mode.  
Data "0" ..... do not apply S-VIDEO mode.
- (2) SPATIALIZER  
This function is not applied on M3LXU/M3XU chassis.  
Set data "0".
- (3) INT. SPEAKER  
This function selects INTERNAL SPEAKERS ON/OFF MODE.  
Data "1" ..... apply INTERNAL SPEAKERS ON/OFF MODE.  
Data "0" ..... do not apply.
- (4) AUX 1, AUX 2  
This is setting of VIDEO INPUT MODE.  

AUX 1	AUX 2	
Data	1	1
	.....	apply VIDEO INPUT MODE
Data	0	0
	.....	apply NO VIDEO INPUT MODE
- (5) POWER 1, POWER 2  
Initial settings at plug in  

POWER 1	POWER 2	
0	0	..... Power off mode (normal)
1	0	..... Power on at last state
0	1	..... Power on at video mode
1	1	..... Power on at TV (4CH) mode
- (6) P IN P  
Select P in P function.  
Data "1" ..... apply on P in P model.  
Data "0" ..... do not apply on non P in P model.
- (7) MTS  
Select MTS function.  
Data "1" ..... apply on MTS model.  
Data "0" ..... do not apply on non MTS model.
- (8) SOUND  
Select SOUND "BALANCE, BASS, TREBLE" functions.  
Data "1" ..... apply on SOUND function.  
Data "0" ..... do not apply on SOUND function.
- (9) M PAL  
See Table 2 for model name data.

### (10) COMB FILTER

Select COMB FILTER MODEL or not.

Data "1" ..... apply on COMB FILTER model.

Data "0" ..... do not apply on nonCOMB FILTER model.

TABLE 2 MODEL AND DATA TABLE

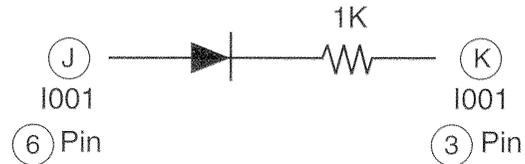

DATA NAME	MODEL NAME		
	27CX5B(C755) 27CX6B(C756)	27CX25B(C750)	20SA3B(C053)
S-IN	1	1	0
SPATIALIZER	0	0	0
INT. SPEAKER	1	1	1
AUX 1	1	1	1
AUX 2	1	1	1
POWER 1	0	0	0
POWER 2	0	0	0
P IN P	1	0	0
MTS	1	1	1
SOUND	1	1	0
M PAL	1	1	0
COMB FILTER	1	1	0

## III. MEMORY INITIALIZE

### 1. TIMER SOUND OPERATION CHECK

#### Adjustment Procedure

- (1) Connect diode (ISS270TA or IS2076) to (J)~(K)

- (2) Confirm OSD-memory switch appears.
- (3) Remove diode.  
After this operation, each setting should become to delivery setting automatically.
- (4) When the above operation is being performed check that a beeping sound is made from the left speaker.

## IV. OPERATION CHECK

### 1. AFC OPERATION CHECK

#### Adjustment Preparation

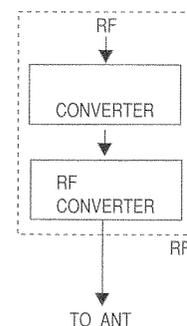

- (1) Connect the jig as shown below to the ANT terminal.

#### Adjustment Procedure

- (1) Receive a standard carrier (not offset) with the channel up/down or direct selection buttons.
- (2) Receive an offset signal of +1.5MHZ.
- (3) Receive an offset signal of -1.5MHZ.  
Check that it is pulled into the standard tuning point.  
(Perform the channel selection operation.)

**Note:** Modulation signal should be used at the circle pattern and the color bar signal.

Checking jig (All channel converter can be used)

**2. CHANNEL SELECTION CIRCUIT OPERATION CHECK**

**2-1 Channel up/down selection**

**Adjustment Preparation**

- (1) Set the TV set so that VHF (11, 13CH), UHF (14, 46, 63CH) and CATV (A, E, P, W, CH) can be received.
- (2) Set AIR/CABLE mode to AIR.  
(Press the MENU key, and select the SETUP and AIR/CABLE mode using ENTER key.)

**Adjustment Procedure**

- (1) Check that VHF are received correctly by pressing CH UP (▲) or DOWN (▼) button.

**Adjustment Preparation**

- (3) Set AIR/CABLE mode to CATV 1.

**Adjustment Procedure**

- (2) Perform the same operation as in item (1), and check that VHF and CATV are received correctly.

**Adjustment Preparation**

- (4) Set AIR/CABLE mode to CATV 2.

**Adjustment Procedure**

- (3) Perform the same operation as in item (1), and check that VHF and CATV are received correctly.

**Adjustment Preparation**

- (1) Set the TV set so that VHF (11, 13CH), UHF (14, 46, 63CH) and CATV (A, E, P, W, A-2, GG, OO, WW, CH) can be received.

**Adjustment Procedure**

- (1) Set AIR/CABLE mode to AIR.
- (2) Select AUTO PROGRAM mode and press (ENTER) key.

After AUTO PROGRAM operation is completed, by pressing the channel UP (▲) or DOWN (▼) button, check that the channels having broadcast signal (s) can be received.

- (3) Set AIR/CABLE mode to CATV 1.
- (4) Perform the same operation as in item (2) check that CATV can be received correctly.

**Adjustment Preparation**

- (2) Set to PROGRAM LIST mode.  
(Menu under PROGRAM mode)

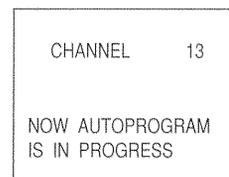

**Adjustment Procedure**

- (5) Check that the above items is SCANNED and the channels is listed "ON" on the program list.

**Note:** CATV channels, actual input channel numbers and indicated channel numbers.

A .....	14
E .....	18
P .....	29
W .....	36
A-2 .....	98
GG (W+7) .....	43
OO (W+15) .....	51
WW (W+23) .....	59

**Note:** Display while AUTO PROGRAM is operating.

**Note:** CATV channels, actual input channel numbers and indicated channel numbers shown in Table 3 below.

**TABLE 3**

A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q	R	S	T	U	V	W

ULTRA BAND																			

## 2-2 VOL UP/DOWN

### Adjustment Procedure

- Check that the sound volume level and volume indication is going up or down continuously by pressing sound volume UP (▲) or DOWN (▼) button.

## 2-3 POWER ON/OFF

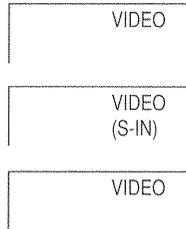

### Adjustment Procedure

- Check that the power alternates between ON and OFF by pressing the POWER button.

### 2-3-1 AVX

#### Adjustment Procedure

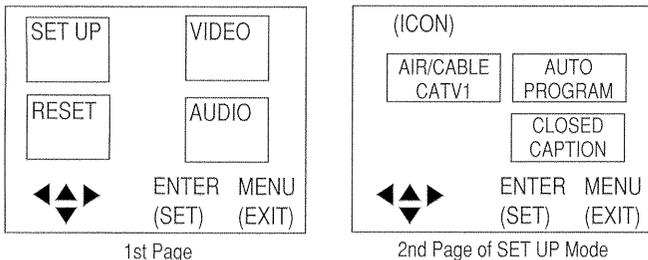

- Check that the OSD displays by pressing the AVX button, such as below.  
(C756/C755/C750)  
Receiving CH → VIDEO  
→ VIDEO (S-IN)  
→ Receiving CH (C053)  
Receiving CH → VIDEO  
→ Receiving CH

## 2-4 MENU (Except C053)

### Adjustment Procedure

- Check that the MENU OSD displays by pressing MENU button.  
**Note:** MENU OSD is displayed as below.
- After MENU OSD is displayed.

Check that the keys function change as below.

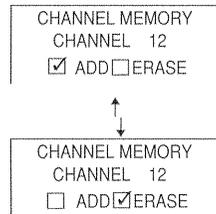

- MENU ..... → MENU
- CH UP ..... → ▲ Key
- CH DOWN ..... → ▼ Key
- VOLUME UP ..... → ► Key
- VOLUME DOWN ... → ◀ Key
- AVX ..... → ENTER

## 2-5 MENU mode (using Remo-con)

### 2-5-1 SET UP mode

#### Adjustment Preparation

- Set to CHANNEL MEMORY mode.

#### Adjustment Procedure

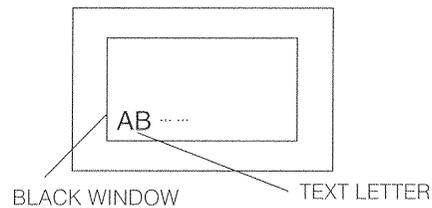

- Check that ADD or ERASE is selected by pressing the ►, ◀ button.

#### Adjustment Preparation

- (a) Set the mode to CLOSED CAPTION.
- (b) Receive a signal having a CLOSED CAPTION signal.

### Adjustment Procedure

- Set DISPLAY setting to ON with ►, ◀ button. At this time, set the other settings as follows.
  - DISPLAY: ON
  - MODE: C.C
  - CHANNEL: 1
- Check that the CAPTION corresponding to the above setting is displayed on the screen.
- Set CHANNEL to 2.
- Check that the CAPTION of CHANNEL 2 is displayed on the screen.
- Set CHANNEL to 1.
- Check that the CAPTION of CHANNEL 1 (FIELD 2) is displayed on the screen.
- Set the mode to TEXT.
- Check that a black window appears and TEXT letters are displayed at the center of the screen.
- Repeat adjustment procedure from (3) to (6), and check that TEXT letters are displayed corresponding to each mode.
- Set the mode to CAPTION.
- The black window should disappear returning to the state of (2).
- Set ON/OFF to OFF.
- Check that the CAPTION letters disappears.

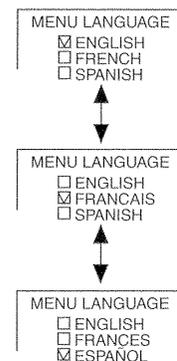

### Adjustment Preparation

- Set to MENU LANGUAGE mode.

### Adjustment Procedure

- Check that language (ENGLISH, FRENCH, SPANISH) is selected by pressing the ▲, ▼ button.

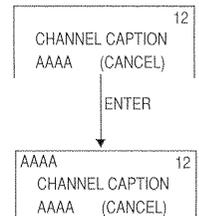

### 2-5-2 PROGRAM mode

#### Adjustment Preparation

- Set to CHANNEL CAPTION mode.

#### Adjustment Procedure

- Select the letter "A" by pressing the ▲, ▼ button, and select the input position by pressing the ►, ◀ button.

- (2) After pressing the ENTER button, check that it indicates "AAAA" same as CH No. indication.
- (3) Select CHANNEL CAPTION mode again. Select the "CANCEL" by pressing the **▶◀** button and press the ENTER button.
- (4) Check that "AAAA" is deleted when the CH No. is indicated after pressing the "MENU" button.

**Adjustment Preparation**

- (3) Set to CHILD LOCK MODE.

**Adjustment Procedure**

- (1) Select CHILD LOCK SET by **▶◀** button.
- (2) Press "0" button 3 times. ("000" is input)
- (3) Check that the picture becomes pitch-dark, and sound does not come out.
- (4) Set to CHILD LOCK mode again, and select 'CHILD LOCK CANCEL' by **▶◀** button.
- (5) Press "0" button 3 times. ("000" is input)
- (6) Check that the picture and sound return to the previous condition.

**Adjustment Preparation**

- (4) Set to VOLUME CORRECTION mode.

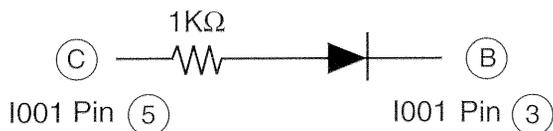

**Adjustment Procedure**

- (1) Select the registration point using **▲▼** button and received Channel No. is memorized by pressing the ENTER button.  
**Note:** 4CH can be memorized.
- (2) Check that volume level changes and sets 100%~50% (5% step) using **▶◀** button.

**2-5-3 CLOCK mode (Clock operation check)**

**Adjustment Preparation**

- (1) Connect diode (IS2076, ISS270TA or equivalent) between (C) and (B).

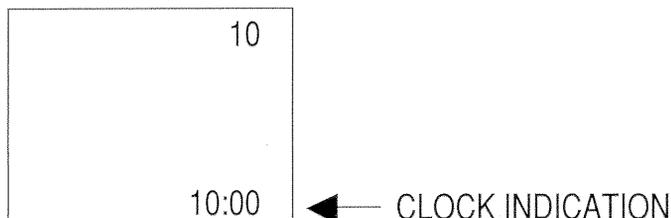

Remarks: The addition of the above diode intends to check the operation with clock counting operation as 60 times mode.

- (2) Set to CLOCK SET mode.

**Adjustment Procedure**

- (1) After clock setting is done and the indication disappears, perform CH indication. Check that clock indication is displayed in addition to the CH indication, and that the clock indication is going to 1 second per minute.

**2-5-4 PICTURE mode**

**Adjustment Preparation**

- (1) Receive the color bar signal.
- (2) Set to CONTRAST mode.

**▶** ; BRIGHTER  
**◀** ; DARKER

**Adjustment Procedure**

- (2) Check that CONTRAST is changed by pressing control **◀/▶** buttons.

**Adjustment Preparation**

- (3) Set to TINT mode.

**▶** ; MORE GREEN  
**◀** ; MORE RED

**Adjustment Procedure**

- (3) Check that TINT is changed by pressing control **◀/▶** buttons.

**Adjustment Preparation**

- (4) Set to COLOR mode.

**▶** ; DEEPER  
**◀** ; LIGHTER

**Adjustment Procedure**

- (4) Check that COLOR is changed by pressing control **◀/▶** buttons.

**Adjustment Preparation**

- (5) Set to BRIGHTNESS mode.

**▶** ; BRIGHTER  
**◀** ; DARKER

**Adjustment Procedure**

- (5) Check that BRIGHTNESS is changed by pressing control **◀/▶** buttons.

**Adjustment Preparation**

- (6) Set to SHARPNESS mode.

**▶** ; CLEARER  
**◀** ; SOFTER

**Adjustment Procedure**

- (6) Check that SHARPNESS is changed by pressing control **◀/▶** buttons.

**Adjustment Preparation**

- (7) Set to WHITE CONTROL mode.

**▶** ; WARM  
**◀** ; COOL

**Adjustment Procedure**

- (7) Check that WHITE CONTROL is changed by pressing control **◀/▶** buttons.

**Adjustment Preparation**

- (8) Set to RESET mode.

**Adjustment Procedure**

- (8) Check that all picture setting modes return to delivery settings by pressing ENTER button.

**2-5-5 SOUND mode (Except C053)**

**Adjustment Preparation**

- (1) Set to BALANCE mode.

**▶** ; RIGHT  
**◀** ; LEFT

**Adjustment Procedure**

- (1) Check that BALANCE is changed by pressing control **◀/▶** buttons.

**Adjustment Preparation**

- (2) Set to BASS mode.

**▶** ; STRONG  
**◀** ; WEAK

**Adjustment Procedure**

- (2) Check that BASS is changed by pressing control **◀/▶** buttons.

### Adjustment Preparation

- (3) Set to TREBLE mode.

### Adjustment Procedure

- (3) Check that TREBLE is changed by pressing control ◀/▶ buttons.

### Adjustment Preparation

- (4) Set to RESET mode.

### Adjustment Procedure

- (4) Check that all sound setting modes return to delivery settings by pressing ENTER button.

### Adjustment Preparation

- (5) (a) Set to "VOLUME" step at \*10. Set to "BASS" and "TREBLE" at center when "LOUDNESS" is turned OFF. Set to "LOUDNESS" Mode.  
 (b) Set "LOUDNESS" to OFF, and "BASS/TREBLE" to center.  
 (c) Set it to LOUDNESS Mode.

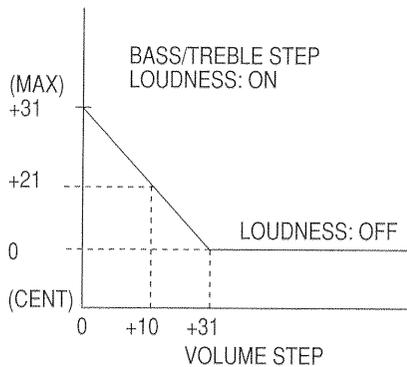

### Adjustment Procedure

- (5) Check that "BASS" and "TREBLE" are changed as below table when set to 'LOUDNESS' is turned ON by pressing (◀) or (▶) control button "LOUDNESS" turn OFF after checked.

LOUDNESS	BASS	TREBLE
OFF	CENTER	
ON	+21 STEP	

(when volume is st 10)

**\*Note:** According to Volume Setting Level, this function works as shown in below figure.

## V. + B ADJUSTMENT (THIS ADJUSTMENT MUST BE DONE AFTER 30 SECONDS OR MORE HEAT-RUN)

- (1) Receive Circle pattern signal.
- (2) Set BRIGHTNESS control and CONTRAST control to maximum.
- (3) Set the AC voltage 120V±1V (Distortion is 3% or Less)
- (4) Connect the DC voltmeter to R909.
- (5) Adjust R928 so that the indication of the DC voltmeter is 96.0±0.3V.

## VI. DEFLECTION CIRCUIT PICTURE ADJUSTMENT OPERATION CHECK

### 1. M3LXU CHASSIS HIGH VOLTAGE LIMITER CIRCUIT OPERATION CHECK

#### Adjustment Preparation

- (1) Connect a high voltage voltmeter between CPT anode terminal (anode capsid) and the ground as shown.

- (2) Set AC input voltage to 120±3V.

- (3) Receive Circle pattern and set "BRIGHTNESS" and "CONTRAST" to maximum. Adjust Screen VR so that beam current is  $I_B \pm 0.1 \text{ mA}$ . (The voltage of ABL terminal -C725 both ends should be 12V or less)

- (4) Connect R831 (Q804 collector side) to GND.

#### Adjustment Procedure

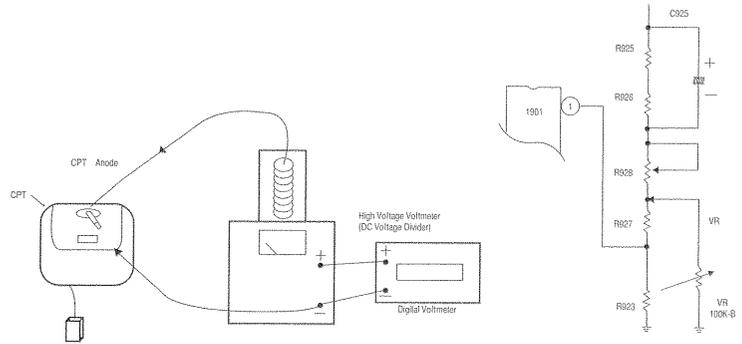

- (1) Check that the normal high voltage and +B voltage is as below.

CHASSIS	EHT ±1KV	IB±0.1mA	IB±0.3V	E1±1.2KV
C755/C756	27.5 (KV)	1.5 (mA)	96.0 (V)	32.5 (KV)
C750	27.5 (KV)	1.5 (mA)	96.0 (V)	32.5 (KV)

#### Adjustment Preparation

- (5) Set AC input voltage to 120±3V. Then, connect the VR (100K-B) to R925 and ground side as below.

**Note:** At that time the value of VR should be maximum.

Use the voltmeter in input impedance 10M ohm or more with indication to the 1st demical place.

#### Adjustment Procedure

- (2) Keep CONTRAST, BRIGHTNESS, and SCREEN VR as in item (3). Reduce the VR value gradually, and check that the picture disappears when high voltage is E1. Immediately after checking that it disappears, turn off the set switch. Remove the VR and high voltage voltmeter. When connecting or removing high voltage voltmeter to or from anode cap, be sure to turn off the switch of the set. Also, be sure to perform it after the chassis discharge of residual high voltage, because the high voltage of CPT anode may be left.

## 2. M3XU CHASSIS HIGH VOLTAGE LIMITER CIRCUIT OPERATION CHECK

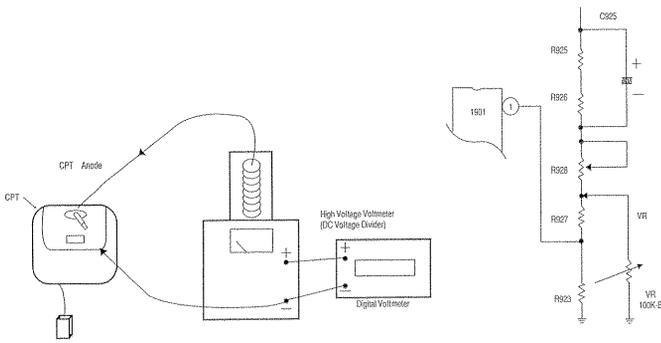

#### Adjustment Preparation

- (1) Connect a high voltage voltmeter between CPT anode terminal (anode capsid) and the ground as shown as follows.
- (2) Set AC input voltage to 120±3V.
- (3) Receive Circle pattern and set "BRIGHTNESS" and "CONTRAST" to maximum. Adjust Screen VR so that beam current is  $I_B \pm 0.1 \text{ mA}$ . (The voltage of ABL terminal -C725 both ends should be 12V or less)

#### Adjustment Procedure

- (1) Check that the normal high voltage EHT as below.

CHASSIS	EHT ±1KV	IB±0.1mA	E1±1.2KV
C053	27.5 KV	1.1 mA	30.5 KV

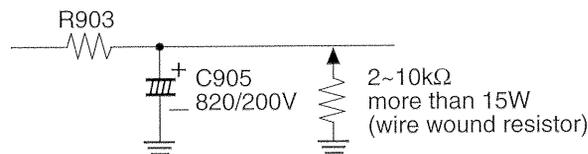

Use the voltmeter of input impedance 10M ohm or more with indication to the first decimal place.

**Adjustment Preparation**

- (4) Turn the power ON and receive circle pattern signal. Set PICTURE and BRIGHTNESS to maximum and the others to the normal (RESET) condition.
- (5) Turn the power OFF and short circuit both ends of R906 with jumper wire.
- (6) Adjust the slidac so that the input power voltage of TV set to  $100 \pm 5V$ .
- (7) Turn the power ON and increase the input power voltage gradually while adjusting the slidac. Check the indicated value by the high voltage voltmeter and picture condition.
- (8) While continuing the above operation, read the operating voltage of X-ray protection circuit E1.
- (9) When X-ray protection circuit operates, set the input power voltage to zero by the slidac and remove the jumper wire and the high voltage voltmeter.

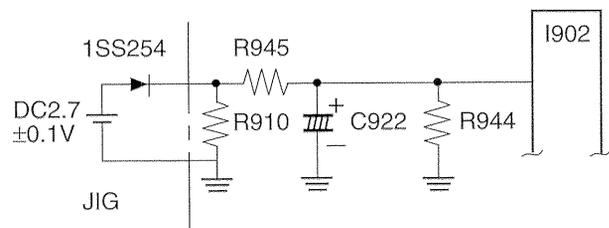

**3. M3LXU CHASSIS FBT PROTECTION CIRCUIT OPERATION CHECK**

- (1) Set "CONTRAST" to MAXIMUM, "BRIGHTNESS" to CENTER.
- (2) Connect an 18KΩ 1/2W resistor between +B line and D711 cathode. Check that the picture disappears.
- (3) Immediately after checking, DISCONNECT the power cord of the set.
- (4) Discharge C905 as follows.

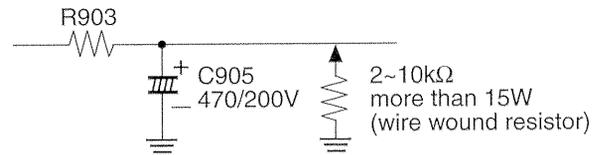

**4. M3XU CHASSIS FBT PROTECTION CIRCUIT OPERATION CHECK**

- (1) Set "CONTRAST" to MAXIMUM, "BRIGHTNESS" to CENTER.
- (2) Apply DC voltage to both end of R910 as below. And check that the picture disappears.

**Note:** To prevent excess load of R910, DC voltage should be applied to R910 less than 2 sec.

- (3) Immediately after checking, DISCONNECT the power cord of the set.
- (4) Discharge C905 as follows.

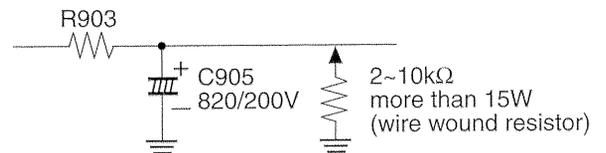

**5. CHECK 16V SHORT CIRCUIT PROTECTION CIRCUIT. (M3LXU CHASSIS ONLY)**

**Adjustment Preparation**

- (1) Set "CONTRAST" to MAXIMUM, "BRIGHTNESS" to CENTER.

**Adjustment Procedure**

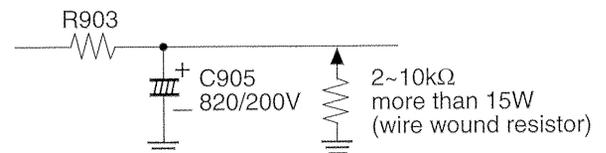

- (1) Connect 10KΩ resistor between Q945 base and GND and check that the picture disappears.
- (2) Disconnect resistor and the power cord immediately.
- (3) Discharge C905 as follows.

**6. LOAD SHORT CIRCUIT PROTECTION CIRCUIT OPERATION CHECK**

**Adjustment Procedure**

- (1) Receive circle pattern signal.
- (2) Set "CONTRAST" to MAXIMUM, "BRIGHTNESS" to CENTER.
- (3) After turning on the switch of the set, confirm that the DC voltage of D019, D020, D703 and D717 at each cathode side should be  $6V \pm 1. OV$ .
- (4) Short-circuit both ends of R091 and check that the picture disappears within 2-3 sec.
- (5) Disconnect short-circuit for R091 and the power cord.
- (6) Discharge C905 as follows.

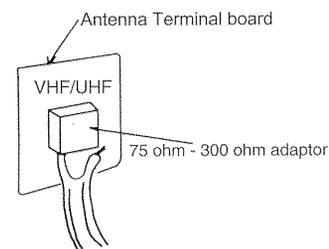

**7. WEAK ELECTRIC FIELD CHECK**

**Adjustment Preparation**

- (1) Connect one side of the 300 ohm feeder to 75 ohm-300 ohm antenna adaptor. Connect the antenna adaptor to the VHF antenna terminal board as shown below.
- (2) Turn to no signal condition.

**Adjustment Procedure**

- (1) Check that the phenomena such as oscillation and abnormal beat etc. do not occur in all the channel.

## VII. P IN P OPERATION CHECK

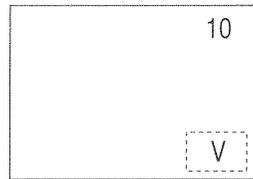

### 1. P IN P EXCEPT C750/C053

#### Adjustment Preparation

- Connect a signal to ANT input and receive it.
- Connect a signal to VIDEO input.

#### Adjustment Procedure

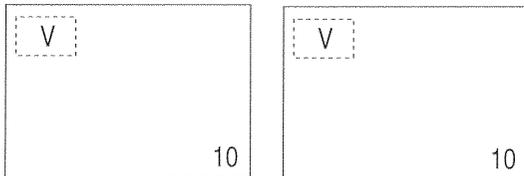

- Check that by pressing "P in P" button of remo-con, sub-picture alternates between ON and OFF. When sub-picture is ON, check that the channel number and "V" are displayed.

### 2. SHIFT

#### Adjustment Preparation

- Press "P in P" button to set to P in P mode.

#### Adjustment Procedure

- Check that by pressing SHIFT button of remo-con, sub-picture moves counterclockwise. At this time, check that "V" of sub-picture also moves as well.

**Note:** When sub-picture is in the upper side of the screen, the channel number of main picture comes to the lower right, as shown in the figure.

### 3. EXCHANGE

#### Adjustment Preparation

- Press "P in P" button to set to P in P mode.

#### Adjustment Procedure

- Check that by pressing "EXCHANGE" button, the contents of main picture and sub-picture are exchanged.

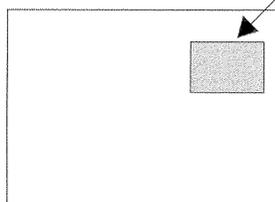

### 4. FREEZE

#### Adjustment Preparation

- Connect a signal to ANTENNA input and VIDEO input. (One or both of the pictures should be moving picture).
- Press "P in P" button to set to P in P mode.
- Sub-picture should be moving picture by pressing "EXCHANGE" button.

#### Adjustment Procedure

- Check that, by pressing "FREEZE" button, sub-picture alternates between moving picture and frozen picture.

- Press "P in P" button to make sub-picture disappear.

### 5. FREEZE (AT P IN P OFF)

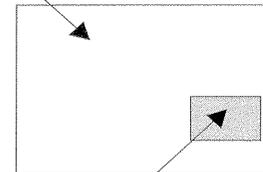

#### Adjustment Preparation

- Connect a signal to ANTENNA input and VIDEO input. Both signals should be moving picture.
- Set P in P to OFF.

#### Adjustment Procedure

- Check that frozen picture of main screen appears by pressing FREEZE button of the remo-con.
- Check it also in the TV and VIDEO modes.
- Check that sub-picture disappears by pressing FREEZE button at picture frozen.
- Check that it turns to normal P in P sub-picture by pressing P in P button at picture frozen.

#### MOVING PICTURE

#### SUB PICTURE

## VIII. FINAL ASSEMBLY ADJUSTMENT/COMMON SERVICE ADJUSTMENT

### 1. PURITY CONVERGENCE ADJUSTMENT

**Note:** For Non ITC type A51KQN61X (20V), A68KRQ58X (HITACHI 27V), apply item 1.1-1.2(8).

For ITC Type A68ADT25X01 (27V), only apply item 1.2(8) (Purity check)

#### 1-1 Preparation of adjustment

- Keep DY stuck to CPT funnel.
- Turn ON the set and receive cross-hatch signal (or circle pattern signal). Adjust the static convergence coarsely according to item 1-5.
- Receive circle pattern signal and adjust the white balance according to item 1-4 (4-9).
- Set BRIGHTNESS control and CONTRAST control to maximum and apply heat-run to the set with circle pattern signal received for 40 min or more.

#### 1-2 Purity adjustment

THIS ADJUSTMENT METHOD APPLIES TO THE PURITY ADJUSTMENT BY USING MICROSCOPE.

- Adjust coarsely White balance, Static convergence (center) and Focus.
- Receive circle pattern and heat-run more than T minutes with CONTRAST and BRIGHTNESS to maximum. Do not delete the raster nor vary the current before fixing the position of DY. Heat-run should be done with perfect raster. (DY and tilt should have been coarsely adjusted)

#### Raster Wane NG

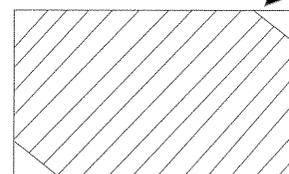

Table 1.

CPT	T
A68KRQ58X	40 Min.
A51KQN61X	20 Min.

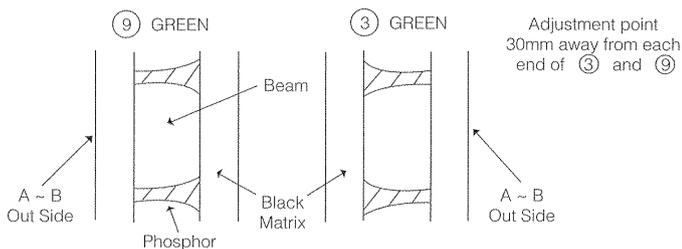

- (3) The magnetic field in artificial magnetic field should follow the table below and the set should face as in table 2. Degauss it from outside.

DESTINATION	VERTICAL FIELD	HORIZONTAL FIELD
USA	0.45 G	0.3 G
CANADA	0.54 G	0.15 G
UNIVERSAL	0.35 G	0.3 G
PANAMA, HAWAII	0.2 G	0.3 G
TAIWAN	0.22 G	0.37 G

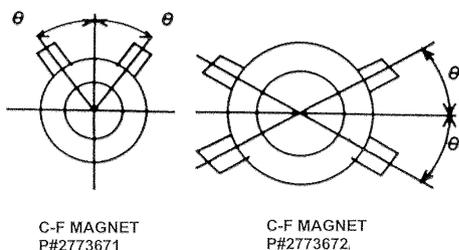

Table 2.  
Directions for adjustment

A68KRQ58X	North
A51KQN61X	North

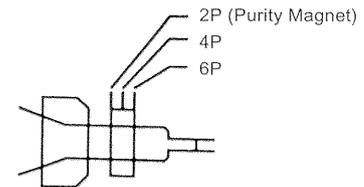

- (4) Adjust the position of purity magnet and DY. Keep the landing balance of (3) and (9), and adjust so that the landing of (3) and (9) is as follows while observing with a microscope.

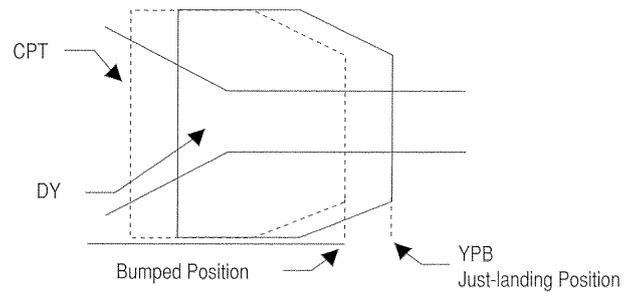

- (a) Open the purity magnet as follows in order to move the raster only in the right-left direction.

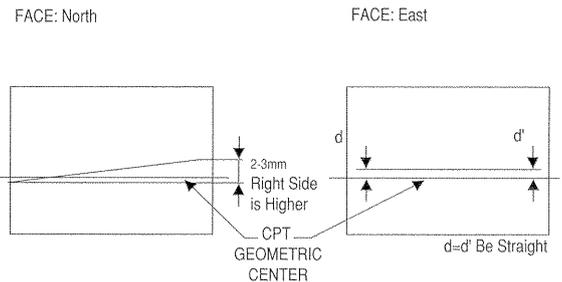

Keep the balance of (3)/(9) DY landing

- (b) YPB (Yoke pull-back) should be as follows.  
(Distance between the bumped position of DY toward the funnel and the just-landing position of (3) and (9))

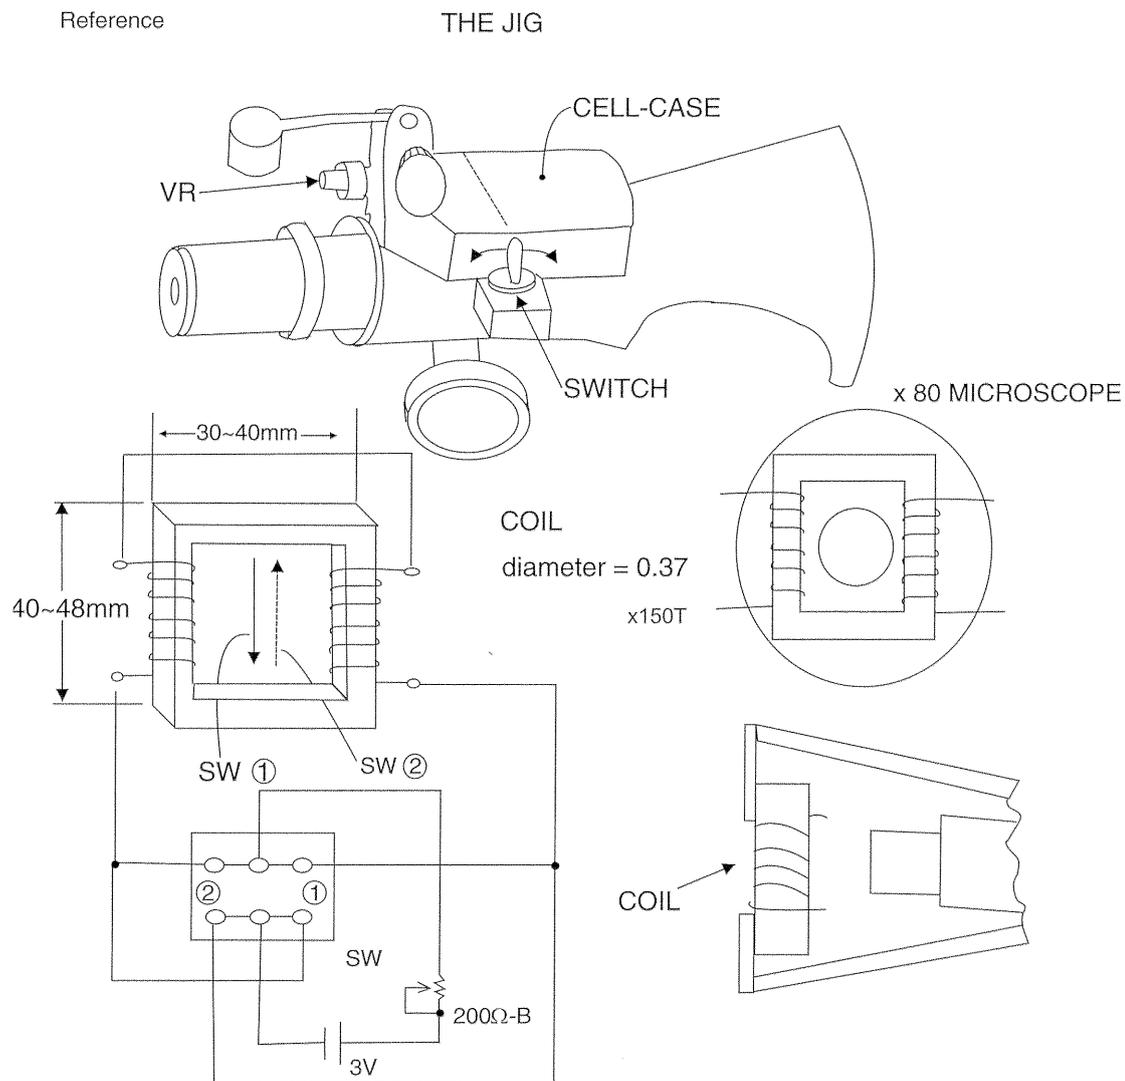

- (c) DY tilt should be as follows.

- (5) Fix DY with fixing torque of 14kg.cm. Control the torque by an electric driver.
- (6) If any miss landing occurs, correct with magnets. If any wane of 10μ or so, judge by white unevenness. At this time, if the white unevenness is all right, any magnet is not needed.
- (7) After peripheral convergence is adjusted, check the position of DY and tighten the DY again. (14kg.cm)
- (8) Purity check  
The magnetic field in artificial magnetic field should follow the magnetic field according to the destination, and the set should face as follows. After degaussing in each direction, check these items visually and with a microscope.
- (a) No problem in white unevenness.
- (b) Each single color must not hit any other colors.
- (c) If white or each single color is defective, apply a magnet (s) on CPT for correction. If any magnet is applied, check it after degaussing.

THE MICROSCOPE

Fix coil to CRT side of microscope. Set it upside down and measure it. Check that beam moves to the right and left equally in quantity. Be careful at assembly that core does not tilt because upward (downward) magnetic field by coil moves the beam to the right (left) or type MS-50X microscope of KANSAI DENKI.

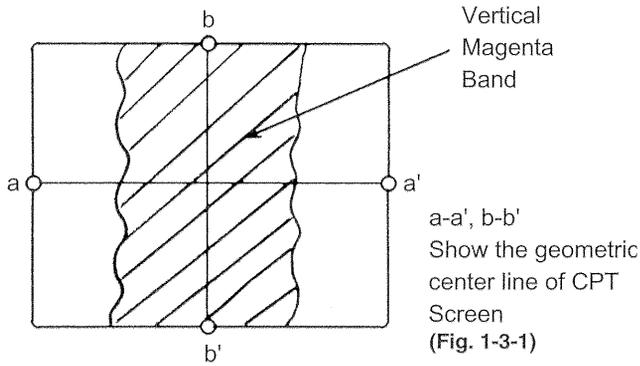

1-3 PURITY ADJUSTMENT

(This adjustment method applies to purity adjustment by hand operation.)

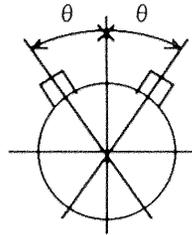

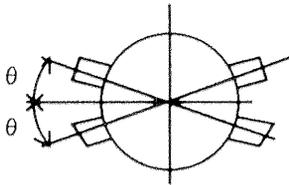

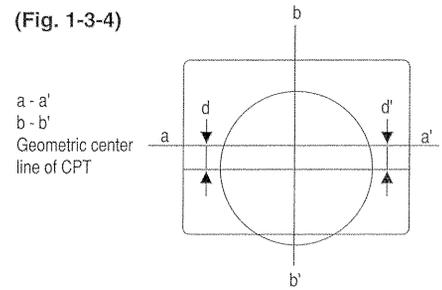

- (1) Use an artificial magnetic field and set the field strength as follows.
  - \*Magnetic field in CPT axis direction: 0 Gauss
  - \*Magnetic field which is vertical to CPT axis:
    - U.S.A., Hawaii, Panama, Guam
    - Bolivia, Peru, Universal ..... 0.3 Gauss
    - Canada ..... 0.15 Gauss
    - Taiwan ..... 0.37 Gauss

(The direction of the magnetic field should be from the left side to the right side of the CPT screen as you face it.)
- (2) Adjust Focus coarsely according to item 2.

- (3) Adjust Convergence coarsely according to item 1-4 and 1-5.
- (4) Receive Circle Pattern signal and check that Contrast and Brightness are maximum.
- (5) Receive magenta signal. When the magenta signal is not available, short-circuit between the base and emitter of Q855 to set to magenta.
- (6) Press DY fully against CPT funnel and turn the purity magnet so that the vertical magenta band comes to the center of the picture (Fig. 1-3-1). Check that color unevenness of both sides are approximately equal at this time. The openings of the purity magnet should be symmetric (Fig. 1-3-2.).

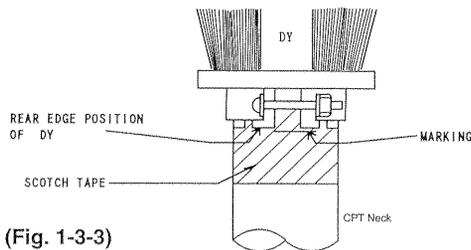

(Fig. 1-3-4)

The openings of the purity magnet should be symmetric:  
on the right and left sides (P#2773671)  
on the upper and lower sides (P#2773672)  
(Fig. 1-3-2)

- (7) Receive the single red signal.  
When the single red signal is not available, short-circuit between the base and emitter of Q845, and between the base and emitter of Q857 to set to single red.
- (8) Pull back DY gradually and when the color unevenness of both sides of the picture disappear, mark the rear edge position of DY on the tape wound around CPT neck as shown in Fig. 1-3-3.  
Pull back DY further and just before the color unevenness starts to appear on the both sides of the picture, mark the rear edge position of DY on the tape by the same way.  
At this time, pull back DY so that the center axis of DY and CPT axis match.

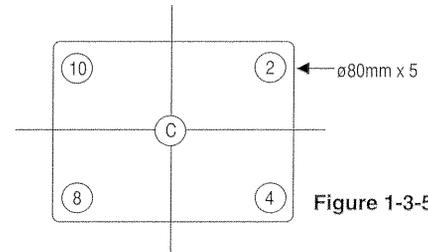

- (9) Move DY so that the rear edge position of DY comes to the center of the two marked lines and fasten DY as  $d=d'$ . (Fig. 1-3-4.). Further insert the rubber wedge between DY and CPT funnel from the top and raise DY backwards.

- (10) Set CPT axis direction magnetic field of the artificial magnetic field according to the artificial magnetic field setting list classified by destination. (The direction of the magnetic field should be from the CPT screen side to the neck side.)
- (11) After degaussing it from outside, check the purity in each color of R, G and B visually.  
Then, turn the screen to white and check the landing at the screen position shown in Fig. 1-3-5 with a microscope.

**Criteria with microscope**

There should be no miss landing at positions 2, 4, 8 and 10  
Green beam should be at the center of the green phosphor at position C. (Refer to the miss landing criteria.)

- (12) Turn over the direction of CPT axis direction magnetic field of the next artificial magnetic field and check it by the same way as item (11). The positions of miss landing criteria with a microscope should be 2, 4, 8 and 10 (Fig. 1-3-5).

**Miss landing criteria**

The following conditions are defined as miss landing. Each color beam shines on the phosphor of the applied color and there are phosphor parts which are not luminous (shaded parts in the right figure) between the luminous parts and black matrix. Or, each color beam shines on the phosphor of not applied color.

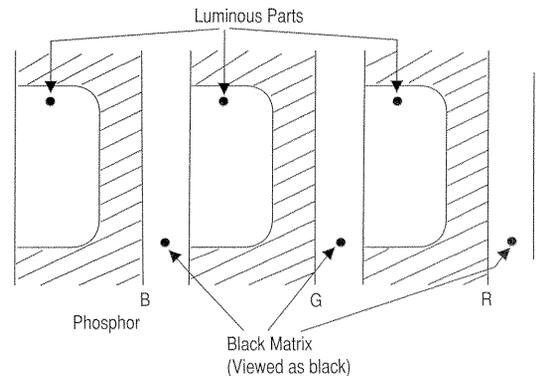

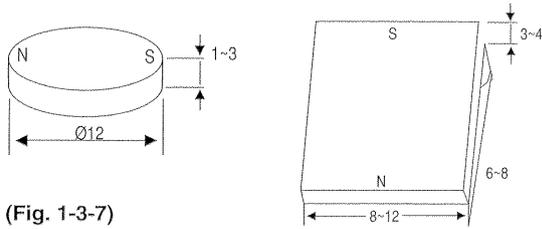

Figure 1-3-6 Enlarged view of screen with microscope

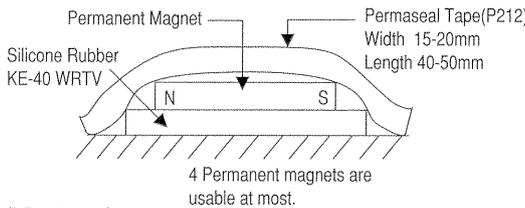

- (13) To improve the miss landing mentioned above, it's acceptable to stick the permanent magnet to CPT funnel (Fig. 1-3-7, Fig. 1-3-8).

**Usage**

Apply a silicone rubber KE-40 WRTV to the permanent magnet shown in the Fig., adhere it to the CPT funnel and then fix it with permaseal tape P212.

(Fig. 1-3-7)

(Fig. 1-3-8)

- (14) Final purity criteria should satisfy the miss landing criteria.  
 (15) When delivering the sets, set CPT axis direction magnetic field to 0 Gauss and degauss is from outside.

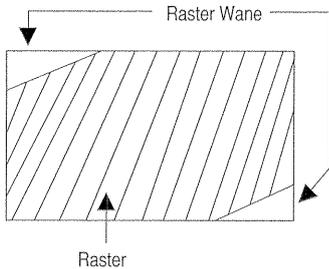

**Table 3**

Artificial magnetic field setting list classified by destination

DESTINATION	VERTICAL FIELD	HORIZONTAL FIELD
USA	0.45 G	0.3 G
CANADA	0.54 G	0.15 G
UNIVERSAL	0.35 G	0.3 G
PANAMA, HAWAII	0.2 G	0.3 G
TAIWAN	0.22 G	0.37 G

**Notes for pre-heat**

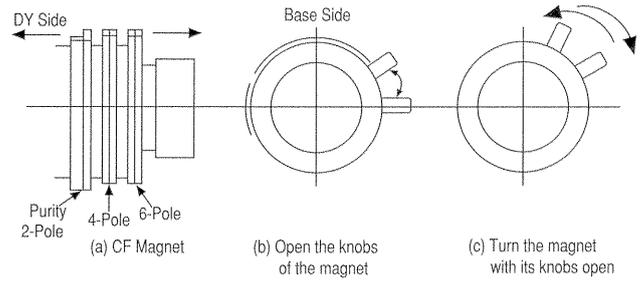

Before pre-heating, stick DY to CPT funnel and fix it so that the raster is perfect.

If the raster is imperfect like the left figure, CPT neck is in danger of cracking because the beam may hit it.

**1-4 Static Convergence Adjustment (Screen center part) (Except ITC CPT)**

- (1) Receive a cross-hatch signal and set Brightness to the center and Contrast to minimum.

(Fig. 1-4-1)

- (2) Open the knobs of 4-pole magnet (2 sheets) (Fig. 1-4-1 (b)) and match the blue/red vertical lines at the center of the screen as shown in Fig. 1-4-2 (a).  
 (3) Turn the 4-pole magnet with its knobs open (Fig. 1-4-1 (c)) and match the blue/red horizontal lines as shown in Fig. 1-4-2 (b).

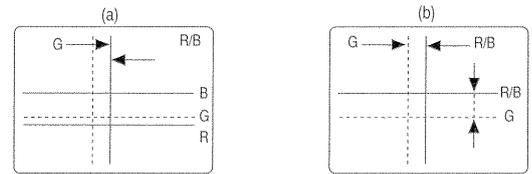

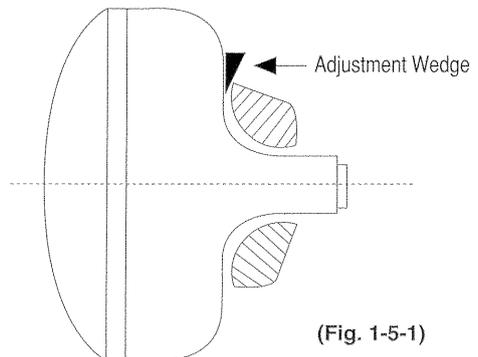

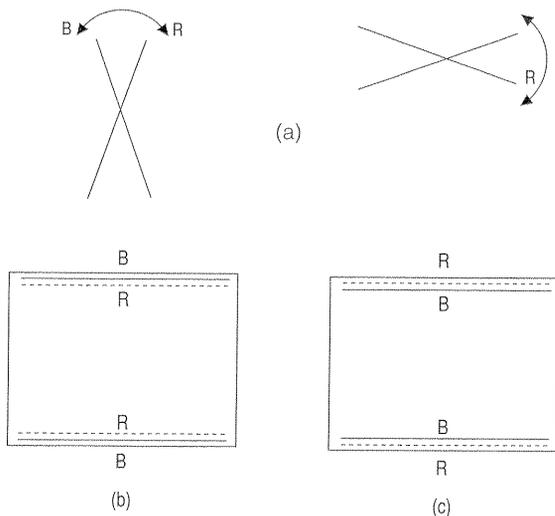

Fig. 1-4-2

**1-5 Dynamic convergence adjustment (Except ITC CPT type)**

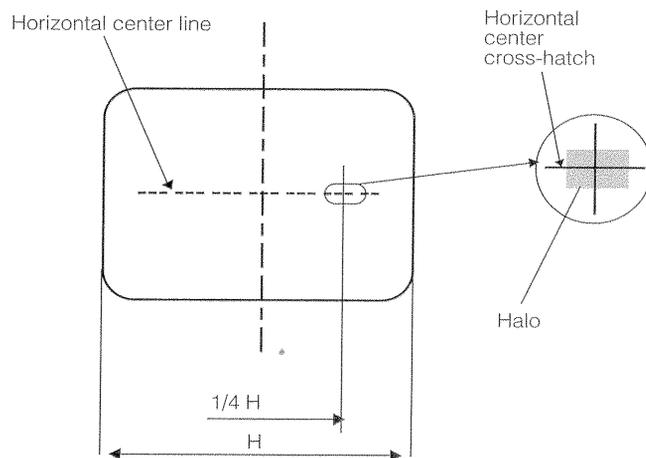

- (1) Insert an adjustment wedge (temporary) between the top of DY opening and CPT funnel as shown in Fig. 1-5-1.  
 By inserting the wedge gradually, match the red and blue vertical lines at the top and bottom of the screen and also match the red and blue horizontal lines of both sides of the screen as shown in Fig. 1-5-2 (a).  
 (2) Adjust by swinging in the right/left directions of DY while observing 6 and 12 horizontal lines of the screen and match the red and blue horizontal lines.  
 As shown in Fig. 1-5-2 (b), when the blue is outside from the red on CPT screen, insert the DY fixing wedge between the right-side DY viewed from the rear of CPT and CPT funnel.  
 (3) As shown in Fig. 1-5-2 (c), when the blue is inside from the red on CPT screen, insert the wedge between the left-side DY and CPT funnel.  
 (4) Insert two DY fixing wedge with approx. 120 to the fixing wedge inserted in the item (2) or (3) and remove the adjustment wedge (temporary).  
 Use the DY fixing wedge after peeling off the tape. After proper location, press and adhere it to the funnel.

(Fig. 1-5-1)

(Fig. 1-5-2)

**Note:** Adjust the point where the halo on the horizontal line disappears and the focus becomes best. For C053 only.

**2. FOCUS ADJUSTMENT**

NO.	MODEL	CPT	CONDITION	Focus VR setting position
1	27CX6B C756	A68KRQ58X (HED-US)	<ul style="list-style-type: none"> <li>• Receive a cross-hatch signal</li> <li>• Contrast control: Maximum</li> <li>• Sharpness control: Center</li> <li>• Brightness control: Where the background is set</li> </ul>	Turn the Focus VR gradually clockwise from the full counterclockwise. Then set it to the point where the focus of center vertical line from the screen center becomes best.
2	27CX5B C755 27CX25B C750	A68ADT25X01 (RCA)	<ul style="list-style-type: none"> <li>• Same as above</li> </ul>	Turn the Focus VR gradually clockwise from the full counterclockwise. Then set it to the point where the focus of center vertical line from the screen center becomes best.
3	C053	A51KQN61X	<ul style="list-style-type: none"> <li>• Receive a cross-hatch signal</li> <li>• Contrast control: Maximum</li> <li>• Sharpness control: Center</li> <li>• Brightness control: Where the background is set</li> </ul>	While observing the cross hatch signal at 1/4H on the center horizontal line on the screen, turn the focus adjustment VR gradually clockwise from full counterclockwise. Set it to the point where the focus at 1/4H is best. (note) Adjust the point where the halo on the horizontal line disappears and the focus becomes best. For C053 only.

**IX. MATCHING CHECK WITH OTHER INSTRUMENTS**

**1. VIDEO INPUT TERMINAL MATCHING CHECK**

**Adjustment Preparation**

- Input the video signal to the VIDEO 1 IN terminal.  
The video signal level should be within  $1 \pm 0.2$  Vp-p (75 ohm termination) with 100% white signal at this time.
- Input the audio signal to the AUDIO 1 IN terminal.  
The audio signal level should be  $400m\text{ Vrms} \pm 20m\text{ Vrms}$ .  
(Connect VCR or TV tuner.)
- Connect an audio AMP to the AUDIO OUT terminals.

**Adjustment Procedure**

- Check that the set receives signal when selecting the AVX mode, by press the AVX (FUNCTION) button of front panel control of set.
- When external input is performed, the video and audio should not be abnormal.  
The 100% white signal that RF input receives should be as bright as the video signal 1Vp-p (75 ohm termination).  
As for the sound, when the 100% modulation that RF input receive is 25KHZ, the sound level should be as much as external audio signal (400Vrms) level.

**2. S-IN INPUT TERMINAL MATCHING CHECK (EXCEPT C053)**

**Adjustment Preparation**

- Connect a video/chroma signal to S-IN terminal.
- Connect a sound signal to AUDIO input terminals.

**Adjustment Procedure**

- Check that the set receives signal at S-IN mode.

**3. AUDIO OUT LEVEL CHECK**

**Adjustment Preparation**

- Input the same audio signal as item 1(2) to AUDIO IN terminal (L). At this time, connect nothing to R terminal.
- Input the same audio signal as item 1(2) to AUDIO IN terminal (R). At this time, connect nothing to L terminal.
- Check that the normal sound is output from both sides of the speakers when signal in item (1) is input.
- Check that the normal sound is output from only the right (R) speaker when signal in item (2) is input.

**Adjustment Procedure**

- Check that the audio output of AUDIO AMP connected to AUDIO HiFi OUT terminals or monitor changes according to "VOLUME" of the set.

- (2) Confirm that the output level of item (a) should be 1Vrms (2.8 Vp-p) ±20%.  
(Above level is equivalent to VOLUME MAXIMUM 100% modulated signal input.)

## X. SAFETY CHECK

### 1. POLARITY CHECK

This check is performed according to UL standard requirement. There should be electricity between AC Power Cord and Chassis Earth.

## XI. MTS OPERATION CHECK

### 1. STEREO/SA BROADCAST RECEIVING CHECK

#### Adjustment preparation

- (1) Set the TV set so that an MTS broadcast (STEREO/SAP) can be received.

STEREO	11
or SAP	ST
	or SA

- (2) Set MTS mode to STEREO or SAP mode.

**Note:** To select between "STEREO/SAP", display sound setting of MTS mode and select AUDIO MENU.

- (3) Set BALANCE to the center.

#### Adjustment Procedure

- (1) When one of the MTS broadcast stereo SAP is received, check that "ST" or "SA" is displayed on the screen.
- (2) Stereo broadcast receiving check
- Select MTS mode and press ENTER button to display "STEREO" on the screen.
  - When only Lch signal is received, Lch sound comes out from the left speaker.
  - When only Rch signal is received, Rch sound comes out from the right speaker.
  - And when monaural signal is received, monaural sound comes out from both the right and left speakers.
- (3) SAP broadcast receiving check
- Select MTS mode. Press sound button to display "SAP" on screen.
  - SAP signal comes out from both of the right and left speakers.
  - When no SAP signal, the sound on "MAIN" side (refer to (3)) comes out.

**Note:** When the channel selection is performed or RECALL button is operated "ST" or "SA" is shown below the channel no. (approx. for 8 sec.)

## 2. MTS MODE CHECK

#### Adjustment Preparation

- (1) Set the TV set so that an MTS broadcast (STEREO/SAP) can be received.
- (2) Set BALANCE to the center.

#### Adjustment Procedure

- (1) When "MTS MODE" is set to "MONO" mode, check that STEREO and MONO indication which have been ON are turned OFF and that monaural sound comes out from the right and left speakers.
- (2) When "MTS MODE" is set to "STEREO" side, check that STEREO and MONO indication which have been OFF are turned ON and that STEREO and SA sound can be received.

## 3. STEREO SEPARATION CHECK

#### Adjustment Preparation

- (1) Set the TV set so that an MTS broadcast (STEREO/SA) can be received.
- (2) Set MTS MODE to "STEREO".
- (3) Connect AUDIO OUT terminals L and R to an oscilloscope.

#### Adjustment Procedure

- (1) When stereo L only signal (or R only signal) is received, check that the output level ratio of L CH and R CH is 15 dB or more.

Example:

When L only is received (100% modulation)

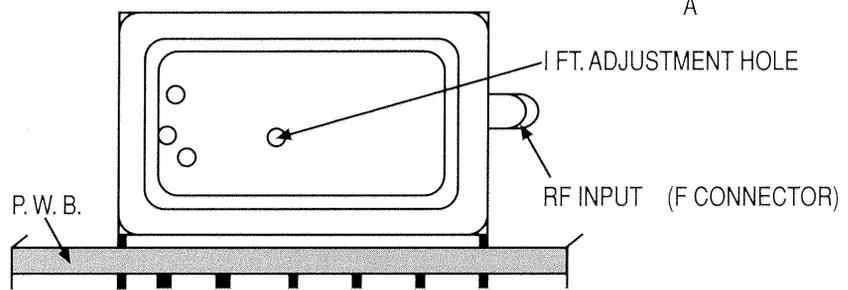

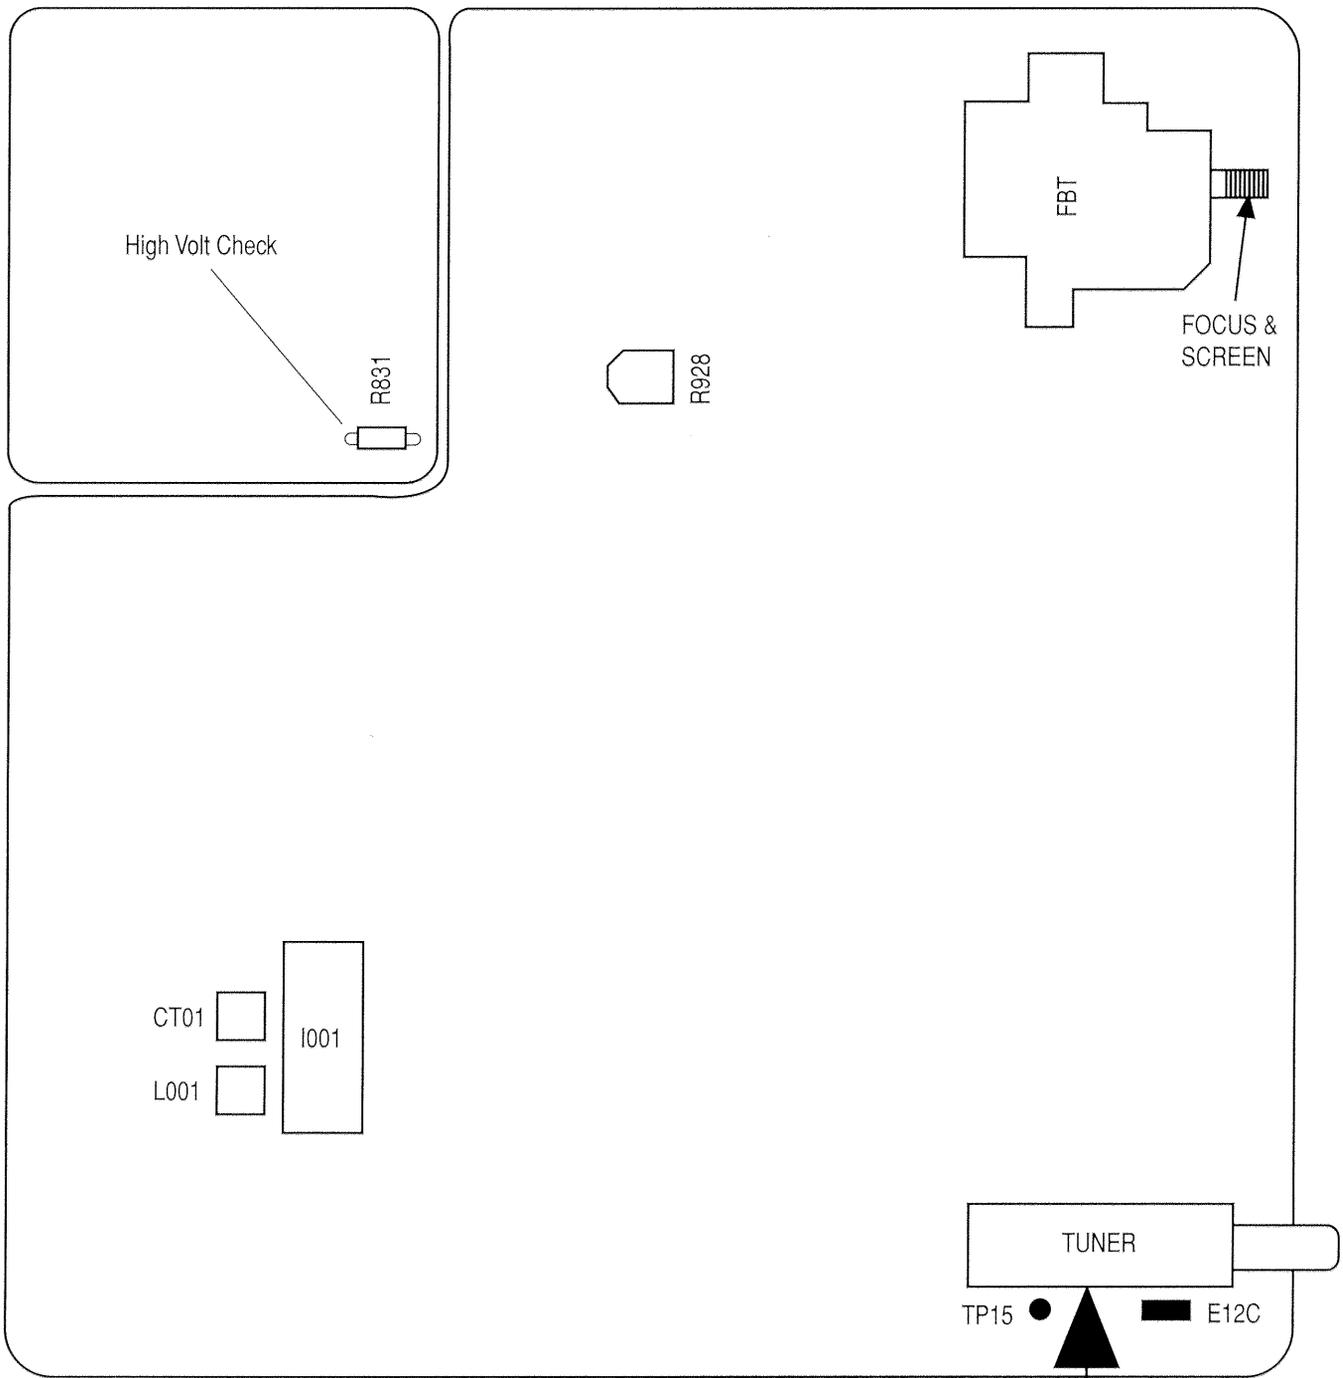

CH	Output Level
L	1.2 Vpp
R	0.21 Vpp or less

## XII. SETTING FOR DELIVERY

## TROUBLESHOOTING

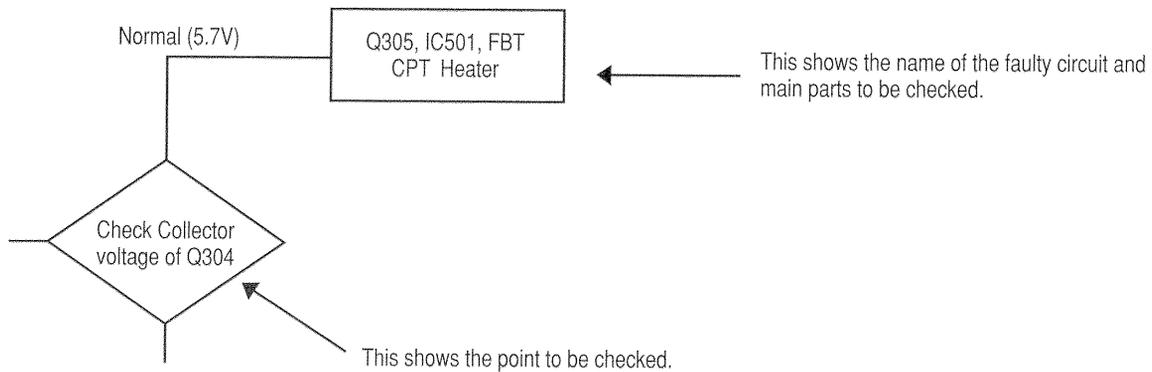

## PRODUCT SAFETY NOTE

The shaded and  $\triangle$  marked components have special characteristics important to safety. Read carefully the Product Safety Notice of each service manual. Don't degrade the safety of the receiver through improper servicing when replacing any of this components.

## HOW TO USE THE FLOW CHART

- (1) The flow chart shows the following:

This shows the name of the faulty circuit and main parts to be checked.  
This shows the point to be checked.

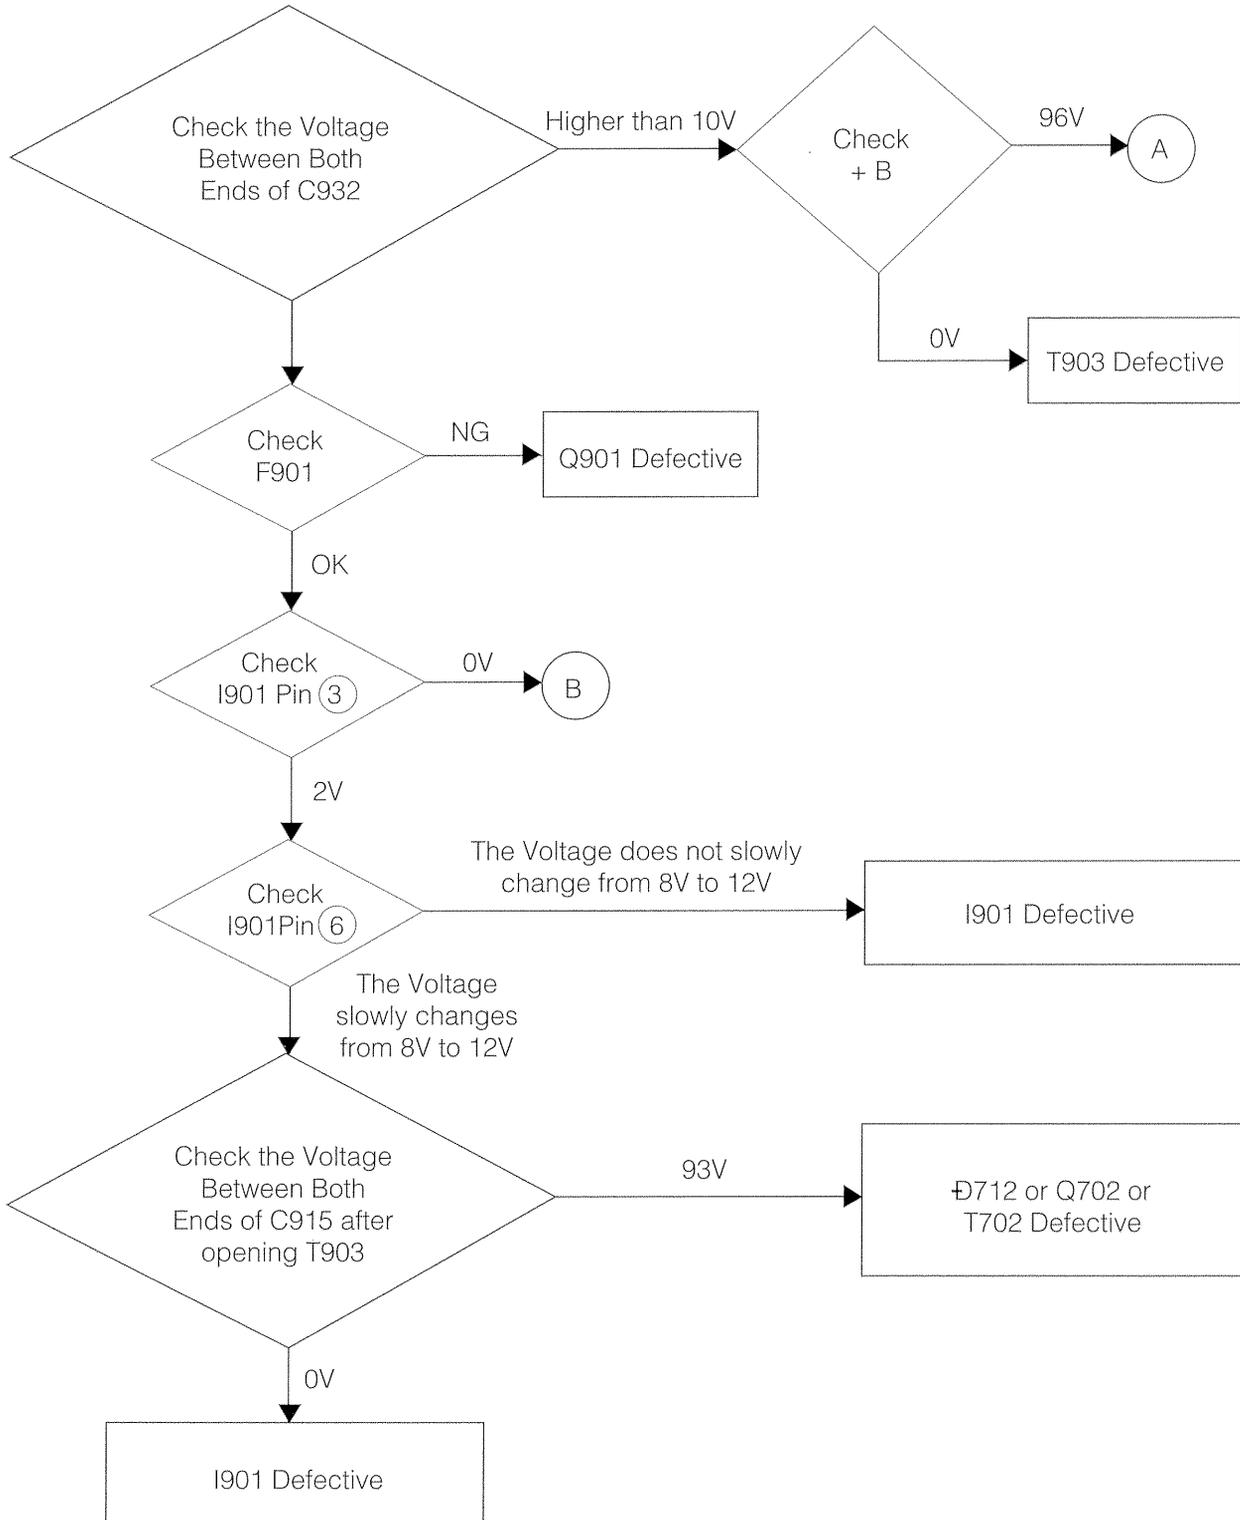

- (2) The voltage shown in the chart may differ to some extent depending on the condition of the set and tester.

## PRECAUTION ON MAKING MEASUREMENTS AND ON HANDLING

1. When any parts become abnormally hot or there is a smell of burning, cut OFF the power immediately.
2. Do not make shorts between circuits or across terminals except for those specified.
3. When applying a signal for checking purposes, make connection in the alternate current system for any not specified.
4. When measuring the voltages of ICs and TRs, be careful to see that the lead bar of the tester does not touch any other terminal.
5. Measure the voltage correctly.
6. Measure the resistance over a small range.
7. Be sure to switch OFF the power when replacing parts.
8. Do not apply a soldering iron for a long time when replacing parts. (Use a solder-wick.)
9. Use an isolation transformer when troubleshooting.

PRODUCT SAFETY NOTE: Components marked with a ⚠ and shaded have special characteristics important to safety. Before replacing any of these components, read carefully the PRODUCT SAFETY NOTICE of this Service Manual. Don't degrade the safety of the receiver through improper servicing.

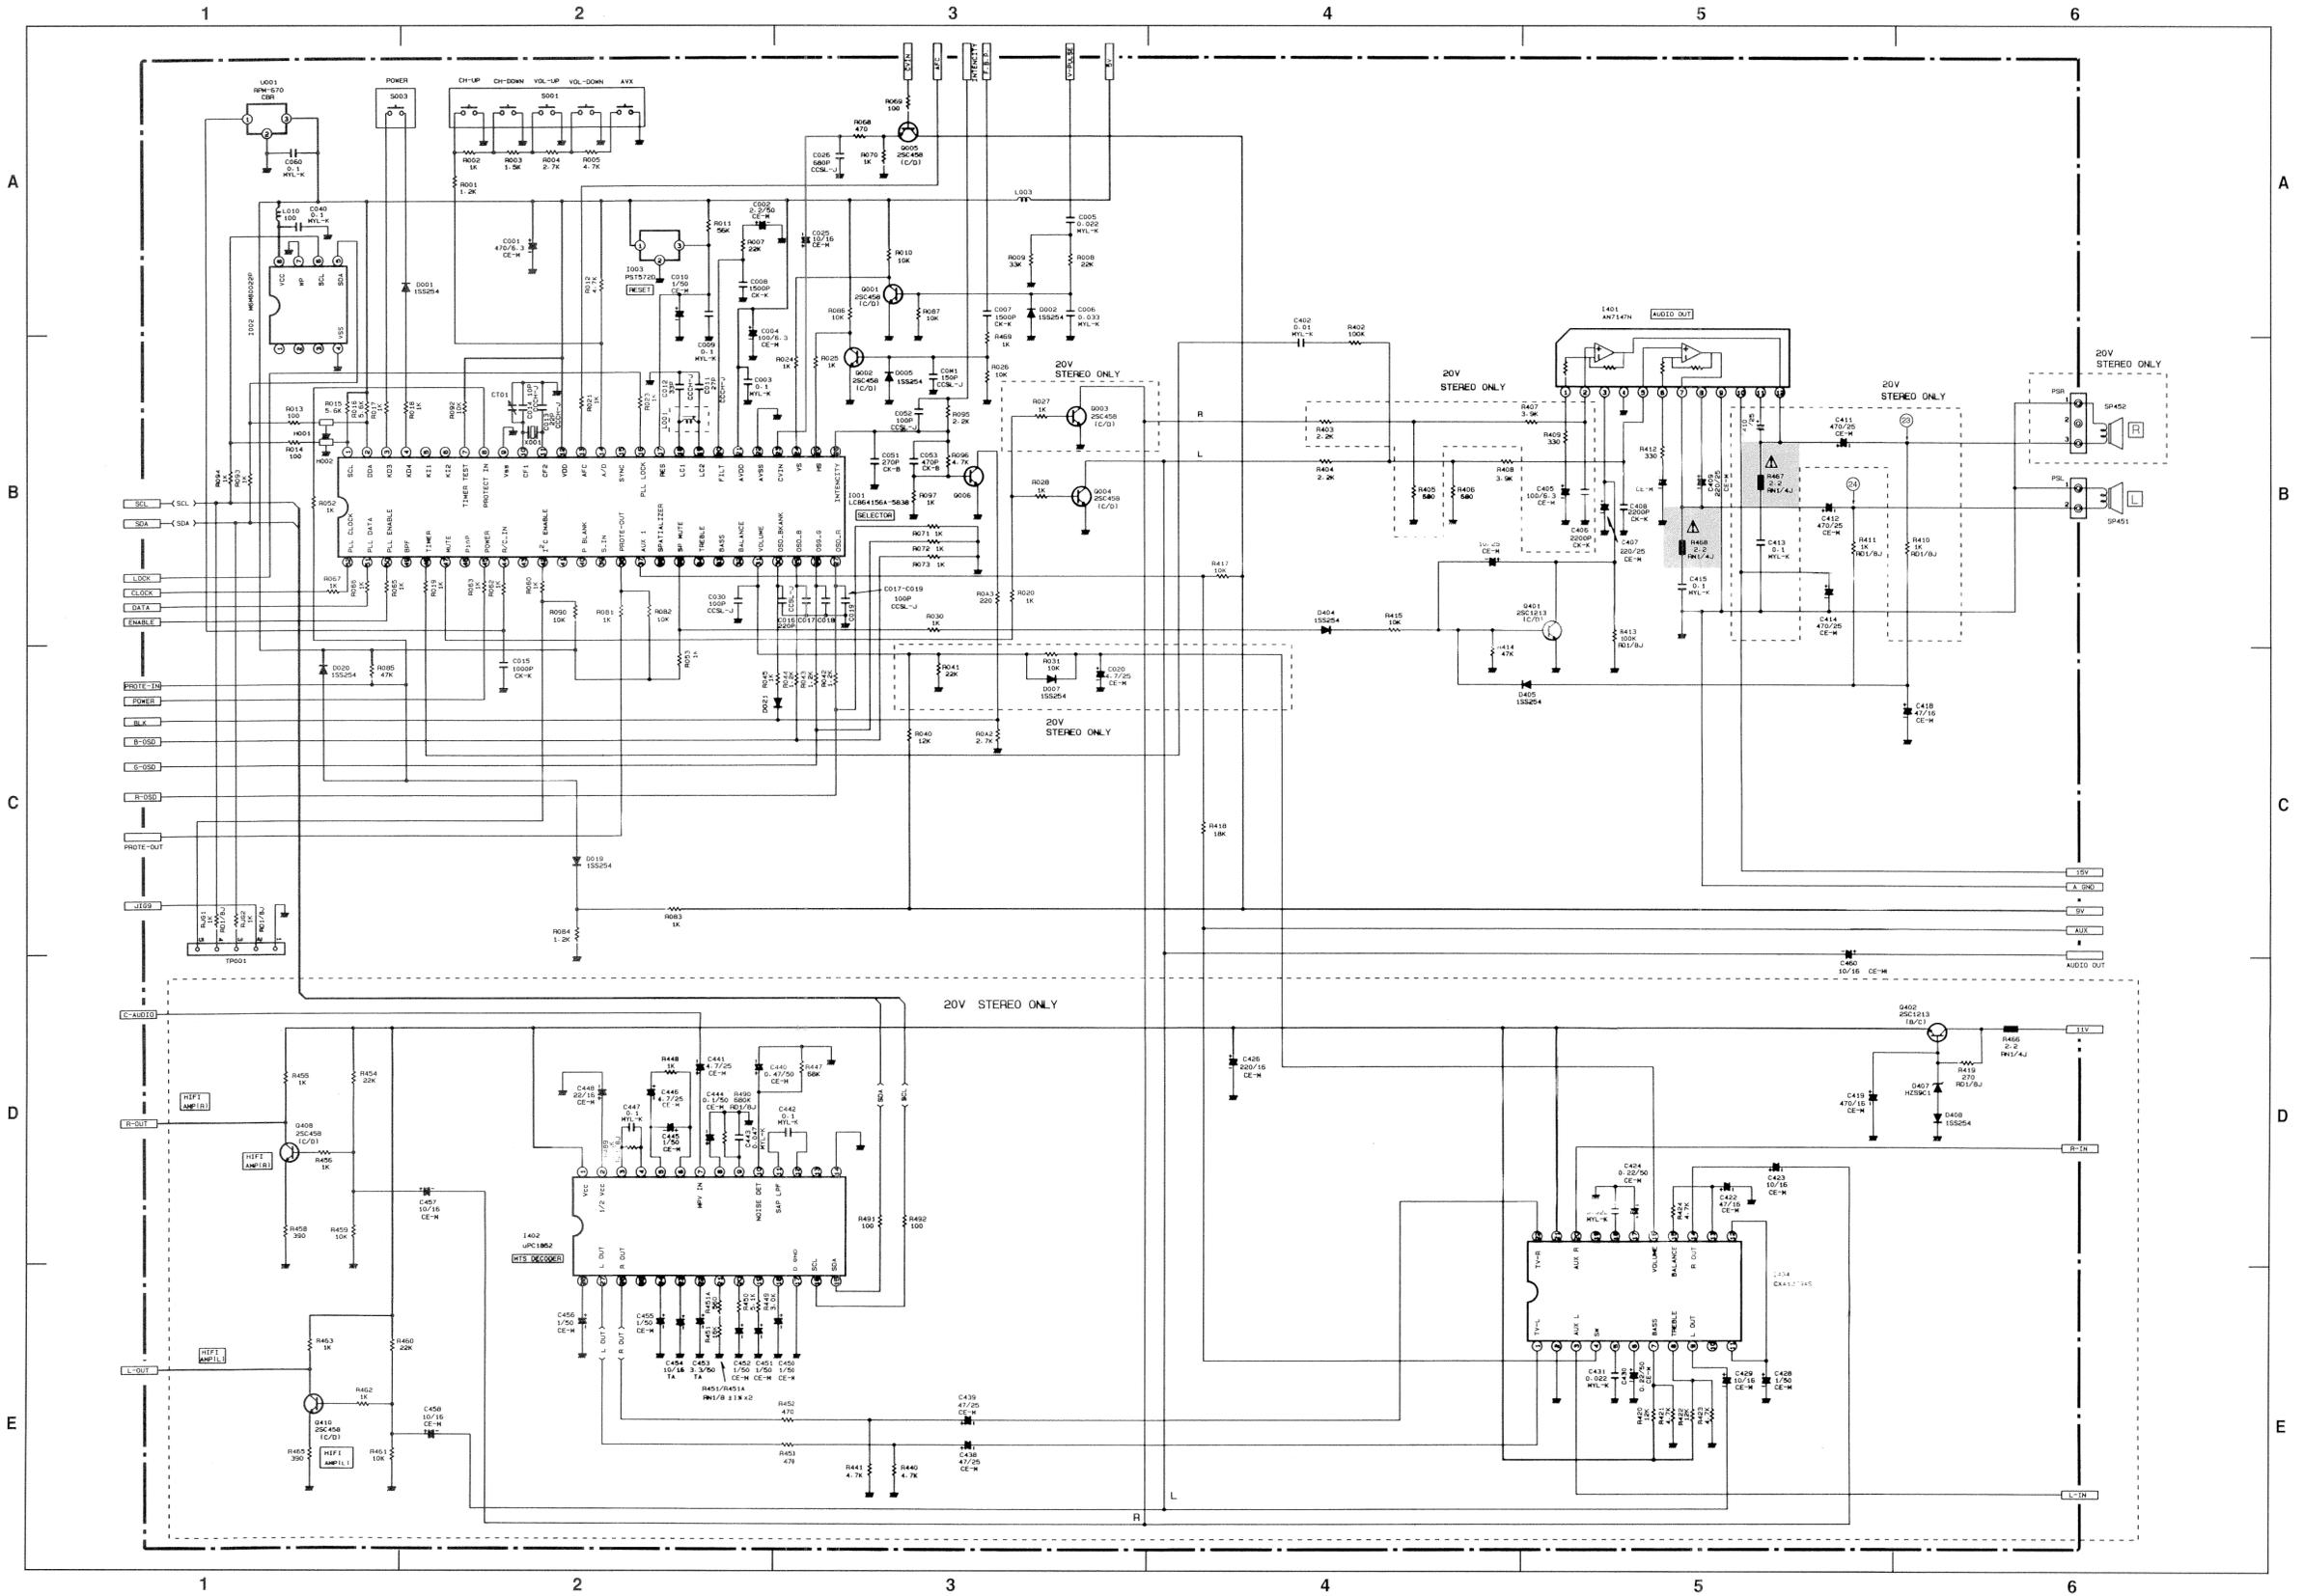

• Since this is a basic circuit diagram, the value of the parts is subject to be altered for improvement.  
 • All DC voltage to be measured with a tester (100kΩ/V). Voltage taken on a complex color bar signal including a standard color bar signal.
