R/C: CLU-851GR  
CLU-692GR  
CLU-691GR

**CAUTION:** Before servicing this chassis, it is important that the service technician read the "Safety Precautions" and "Product Safety Notices" in this Service Manual.

This television receiver will display television  
Closed Captioning (CC or □) in accordance  
with paragraph 15.119 of the FCC rules.

SOLID STATE COLOR TELEVISION

## Safety Precautions

**NOTICE:** Comply with all cautions and safety related notes located on or inside the cabinet and on the chassis or picture tube.

**WARNING:** Since the chassis of this receiver is connected to one side of the AC power supply during operation, whenever the receiver is plugged in, service should not be attempted by anyone unfamiliar with the precautions necessary when working on this type of receiver.

The following precautions should be observed:

1. Do not install, remove, or handle the picture tube in any manner unless shatterproof goggles are worn. People not so equipped should be kept away from the picture tube while handling.
2. When service is required, an isolation transformer should be inserted between power line and the receiver before any service is performed on a "HOT" chassis receiver.
3. When replacing a chassis in the receiver, all the protective devices must be put back in place, such as barriers, nonmetallic knobs, adjustment and compartment cover-shields, isolation resistors, capacitors, etc.
4. When service is required, observe the original lead dress in the high voltage circuitry area.
5. Always use the manufacturer's replacement components. Critical components as indicated on the circuit diagram should not be replaced by another manufacturer's. Furthermore, where a short circuit has occurred, replace those components that indicate evidence of overheating.
6. Before returning a serviced receiver to the customer, the service technician must thoroughly test the unit to be certain that it is completely safe to operate without danger of electrical shock, and be sure that no protective device built into the receiver by the manufacturer has become defective, or inadvertently defeated during servicing.

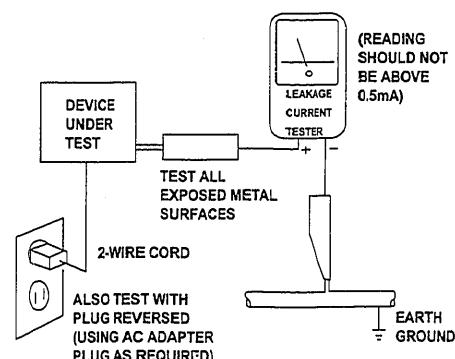

Therefore, the following checks should be performed for the continued protection of the customer and service technician.

### Leakage Current Cold Check

With the AC plug removed from the 120V AC 60Hz source, place a jumper across the two plug prongs. Turn the AC power switch ON using an insulation tester (DC500V), connect one lead to the jumpered AC plug and touch the other lead to each exposed metal part (antennas, screwheads, metal overlays, control shafts, etc.), particularly any exposed metal part having a return path to the chassis should have a minimum resistor reading of  $0.24\text{M}\Omega$  and a maximum resistor reading of  $5.2\text{M}\Omega$ . Any resistance value below or above this range indicates an abnormality which requires corrective action. Exposed metal part not having a return path to the chassis will indicate an open circuit.

### Leakage Current Hot Check

Plug the AC line cord directly into an AC 120V 60Hz outlet (do not use an isolation transformer for this check). Turn the AC power ON. Using a "leakage Current Tester (Simpson's Model 229 or equivalent)", measure for current from all exposed metal parts of the cabinet (antennas, screwheads, overlays, control shafts, etc.) particularly any exposed metal part having a return path to the chassis or to a known earth ground (water pipe, conduit, etc.). Any current measured must not exceed 0.5mA.

### AC Leakage Test

**ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE RECEIVER TO THE CUSTOMER.**

### High Voltage

This receiver is provided with a hold down circuit for clearly indicating that voltage has increased in excess of a predetermined value. Comply with all notes described in this Service Manual regarding this hold down circuit when servicing, so that this hold down circuit is operated correctly.

### Serviceman Warning

With minimum BRIGHTNESS and CONTRAST, the operating high voltage in this receiver is lower than 37.0kV. In case any component having influence on the high voltage is replaced, confirm that high voltage with minimum BRIGHTNESS and CONTRAST is lower than 37.0kV. To measure high voltage use a high impedance High Voltage Meter. Connect (-) to chassis earth and (+) to the CPT Anode button (See the following connection diagram).

**NOTE:** Turn the power switch OFF without fail before the connection to the Anode button is made.

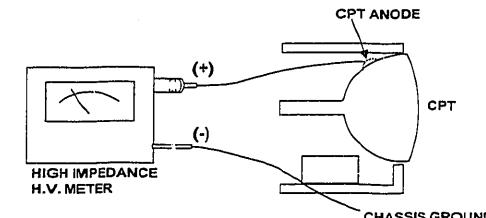

## Product Safety Notice

Many electrical and mechanical parts in HITACHI television receivers have special safety related characteristics. These are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacements parts which have these special safety characteristics are identified in this Model Service Manual.

Electrical components having such features are identified with an  $\Delta$  mark in the schematics and parts list in this Model Service Manual.

The use of a substitute replacement component which does not have the same safety characteristics as the HITACHI recommended replacement one, shown in the parts list in this Model Service Manual, may create shock, fire, X-Radiation, or other hazards.

Production Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current HITACHI Service Manual. A subscription to, or additional copies of HITACHI Service Manual may be obtained at a nominal charge from HITACHI SALES CORPORATION.

### X-Radiation

**TUBE:** The primary source of X-Radiation in this receiver is the picture tube. The tube utilized in this chassis is specially constructed to limit X-Radiation emission. For continued X-Radiation protection, the replacement tube must be the same type as the original HITACHI approved type.

When troubleshooting and making test measurements in a receiver with an excessive high voltage problem, avoid coming unnecessarily close to the picture tube and the high voltage component.

Do not operate the chassis longer than is necessary to locate the cause of the excessive voltage.

This Service Manual is intended for qualified service technicians; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual. Improperly performed repairs can adversely affect the product and its safety. Consumers should not risk trying to do the necessary repairs and should instead refer to a qualified service technician.

### WARNING

Lead in solder used in this product is listed by the California Health and Welfare agency as a known reproductive toxicant which may cause birth defects or other reproductive harm (California Health and Safety Code, Section 25249.5).

When servicing or handling circuit boards and other components with lead in solder, avoid unprotected skin contact with the solder. Also, when soldering do not inhale any smoke or fumes produced.

## Safety Notice Use Isolation Transformer When Servicing

Components having special safety characteristics are identified by  $\Delta$  on the parts list in this Model Service Manual and its supplements and bulletins. Before servicing this, it is important that the service technician read and follow the "Safety Precautions" and the "Product Safety Notices" in this Service Manual.

For continued X-Radiation protection, replace picture tube with original type or Hitachi equivalent type.

### POWER SOURCE

This television receiver is designed to operate on 120 Volts/60Hz, AC house current. Insert the power cord into a 120 Volts/60Hz outlet.

**NEVER CONNECT THE TV TO OTHER THAN THE SPECIFIED VOLTAGE OR TO DIRECT CURRENT.**

Use of this TV set in 50 Hz areas will not harm the TV set. However, it will cause the clock display to run slower. Consult service personnel if you move to an area where the power supply frequency is 50 Hz.

CLOCK	60Hz	50Hz
D022	Install	Delete

## TECHNICAL SPECIFICATIONS

### POWER RATINGS

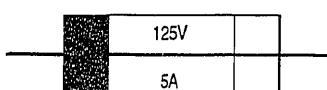

35TX10B/CZ41 .....	180 watts
31UX5B/CY45 .....	180 watts
31CX4B/CY44 .....	180 watts
27UX5B/C745 .....	155 watts
27CX4B/C744 .....	155 watts
27CX3B/C743 .....	155 watts

### COLOR PICTURE TUBE

35TX10B/CZ41 .....	A89AEJ15X01
31UX5B/CY45 .....	M78JUA165X
31CX4B/CY44 .....	A78LCU30X
27UX5B/C745 .....	M68JUA168X
27CX4B/C744 .....	A68KSA30X
27CX3B/C743 .....	A68KSA30X

### CAUTION

The following symbol near the fuse indicates fast operating fuse (to be replaced). Fuse ratings appear within the symbol.  
Example:

F901

The rating of fuse F901 is 5.0A-125V.

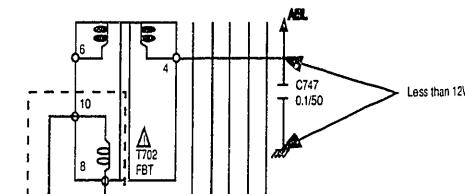

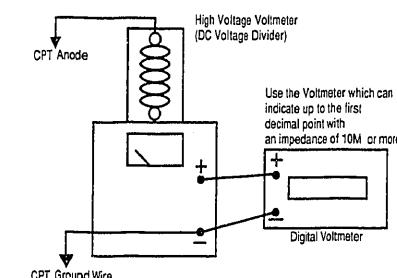

Replace with the same type fuse for continued protection against fire.

## TECHNICAL CAUTIONS

### High Voltage Limiter Circuit Operation Check and Overvoltage Protection Circuit Operation Check

#### Adjustment Preparation

1. Connect a High Voltage Voltmeter between CPT Anode terminal (Anode capsule) and Ground. (TP701)
2. Set the AC input voltage to  $120 \pm 3\text{V}$ .
3. Receive Circle Pattern or Broadcast Signal and set "BRIGHTNESS" and "CONTRAST" to maximum. Adjust the SCREEN VR and SUB-BRIGHTNESS VR (R340) so that Beam Current is  $I_B \pm 0.1\text{mA}$ . (The voltage at ABL terminal (C747) should be 12V or less.)

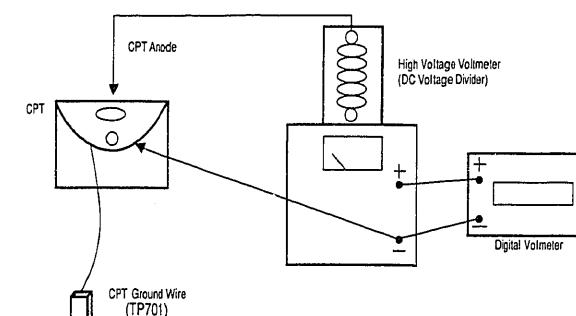

#### Adjustment Procedure

1. Check that the normal High Voltage is  $E_{HT} \pm 1\text{kV}$ .

CHASSIS	EHT	$I_B \pm 0.1\text{mA}$	E1 (kV)
CZ41	30.2KV	1.8mA	35.5KV
CY44, CY45	29.2KV	1.65mA	34.0KV
C743, C744, C745	28.0KV	1.5mA	33.0KV

#### Adjustment Preparation

4. Set AC input voltage to  $100 \pm 5\text{V}$ . Short circuit both ends of R903.

Use the voltmeter impedance  $10M\Omega$  or more with indication to the first decimal place.

#### Adjustment Procedure

2. Keep CONTRAST, BRIGHTNESS, and SCREEN VR as in item (3). Increase AC input voltage gradually and check that the picture disappears when high voltage is E1. Immediately after checking that it disappears, turn OFF the set switch. Remove adjustment Jig and High Voltage Voltmeter. When connecting or removing High Voltage Voltmeter to or from Anode cap, be sure to turn OFF the switch of the set. Also, be sure to perform it after the chassis discharge of residual high voltage, because the high voltage of CPT Anode may be left.

Refer to CHASSIS SERVICE MANUAL PA NO. 0040 for additional technical information.

**Note:**

1. MAIN CHASSIS ADJUSTMENT is done with precision equipment. Readjustment is only recommended if the service technician replaced a defective component related to the circuit.
2. COMMON SERVICE ADJUSTMENT is recommended for the service technician after final troubleshooting and repair is done. Quick check and fine tuning is advisable to verify that the problem is eliminated.

## 1. CHASSIS ADJUSTMENT

### 1-1. IF ADJUSTMENT

#### 1-1-1. AGC Coarse Adjustment (R202)

Set AGC adjustment VR (R202) to mechanical center.

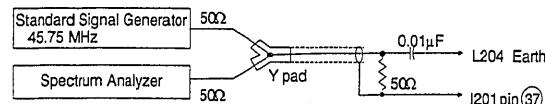

#### 1-1-2. VCO Adjustment (L204)(First Method)

##### Adjustment Preparation

(1) Apply  $9.0 \pm 0.1$  V to L201 pin ⑯.

(2) Connect L201 pin ⑯ to GND.

(3) Connect the following jig and pick up VCO oscillation leakage voltage.

##### Adjustment Procedure

(1) Adjust L204 so that VCO frequency detected by Spectrum Analyzer is  $45.75\text{MHz} \pm 50$  KHz. (Match the output level of Standard Signal Generator to the level of VCO oscillation leakage voltage and adjust L204 to take 0 beat.)

Note: Perform this adjustment after VCO frequency is stabilized.

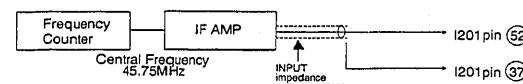

#### 1-1-2. VCO Adjustment (L204) (Second Method)

##### Adjustment Preparation

(1) Apply  $9.0 \pm 0.1$  V to L201 pin ⑯.

(2) Connect L201 pin ⑯ to GND.

(3) Connect the following jig and pick up VCO oscillation leakage voltage.

##### Adjustment Procedure

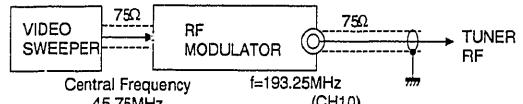

(1) Adjust L204 so that the reading of Frequency Counter is  $45.75\text{MHz} \pm 50$  KHz.

Note: Perform this adjustment after VCO frequency is stabilized.

#### 1-1-3. IF Overall Waveform Adjustment

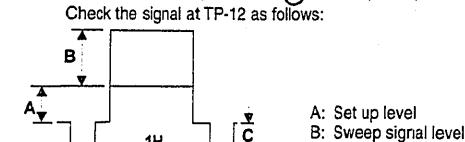

##### Adjustment Preparation

(1) Connect signal as follows:

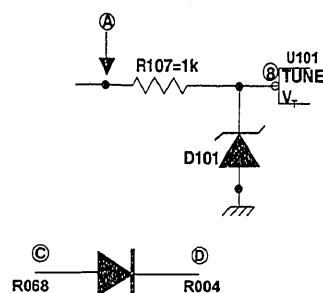

Marks 0.2 MHz (CH10)  
1 MHz  
2 MHz  
3.6 MHz  
(Output level  $91 \pm 3$  dB $\mu$  (50Ω load Modulation 60 - 70%))

(2) Connect Oscilloscope to Q203 (E) Emitter (TP-12). Check the signal at TP-12 as follows:

(3) Add the following voltage:  
(1) L201 pin ⑯: +B (9V)

- (2) I001 pin ⑫: +B (5V)
- (3) TUNER VT<sub>i</sub> point ④: 42V
- (4) Connect a diode (1S2076, 1SS270TA) to: ④ - ⑤

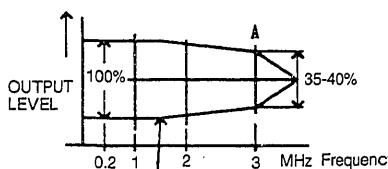

(The other side of 101)

- (5) Initialize memory\*
- (6) Receive Color Bar Signal.

##### Adjustment Procedure

(1) Adjust TUNER IFT coil so that the output level of 0.2MHz is reference level (100%) and 3.6MHz level is 35% - 40%. (At this time, do not turn TUNER IFT coil more than 1 turn.)

Check that 1MHz~2MHz level is 70%~100%.

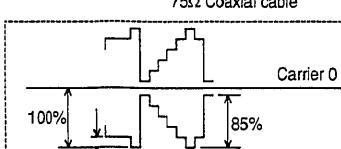

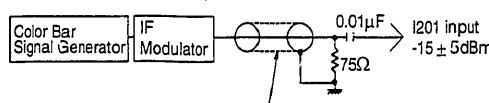

\*Note: Refer to item 1-1-6. Initial Turn ON Procedure.

#### 1-1-4. AFS Discrimination Adjustment (L205)

##### Adjustment Preparation

- (1) Input Signal: Between X103 SAW FILTER input and Earth. (R108 both ends)

- (2) Apply  $9.0 \pm 0.1$  V to L201 pin ⑯.
- (3) Connect a DC Voltmeter (internal impedance 1M ohm or more) to AFS output terminal. (L201 pin ⑰)

##### Adjustment Procedure

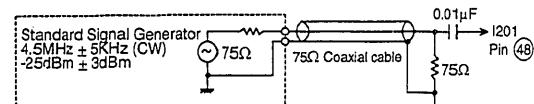

- (1) Turn L205 and check that DC Voltmeter connected as above varies from under 0.5 V to over 8.5V.
- (2) Adjust L205 so that the DC Voltmeter is  $6.5 \pm 0.5$  V at the intermediate point of the core which is changing voltage rapidly in (1) above.

Note: After this adjustment is finished, perform item No. 1-1-2. VCO Adjustment Check. If it is deviated, adjust to regular adjusting point and check again the subsequent adjustments.

#### 1-1-5. Sound Discrimination Adjustment (L202)

##### Adjustment Preparation

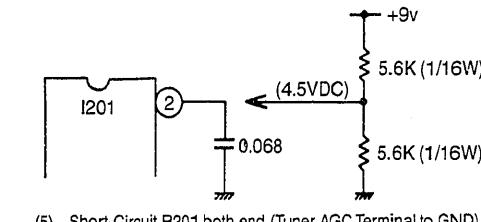

- (1) Input Signal: Apply the following signal to L201 pin ⑯.

- (2) Apply DC Voltage  $9.0 \pm 0.1$  V to L201 pin ⑯.

- (3) Connect a Voltmeter between Q201 Emitter and Earth.

- (4) Apply the following Voltage to L201 pin ⑯.

- (5) Short-Circuit R201 both end (Tuner AGC Terminal to GND).

##### Adjustment Procedure

- (1) Adjust L202 so that the reading of DC Voltmeter is  $3.5 \pm 0.3$  V.
- (2) After adjusting, release the jig above (4) and (5).

#### 1-1-6. VCO For OSD Adjustment

This chassis starts in initial turn ON and AUTO demonstration mode before memory initialize. So memory initialize should be done according to next procedure before adjustment start.

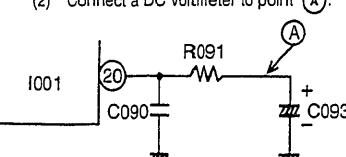

##### Initial Turn ON Procedure

- (1) Supply AC power. TV Set is turned ON.
- (2) Turn OFF the set using power switch (S001). Remote-Con not used.
- (3) Turn ON the set again.
- (4) Memory initialize (see item 1-4. Memory Initialize) should be done.

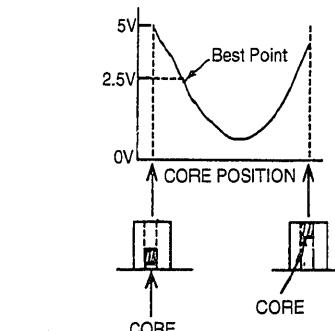

##### Adjustment Preparation

- (1) Receive Color Bar or Circle Pattern Signal.

- (2) Connect a DC Voltmeter to point A.

- (1) Adjust L010 so that the Voltmeter is  $2.5 \pm 0.2$  V.

#### 1-2. COMB FILTER ADJUSTMENT (1)

##### Adjustment Preparation

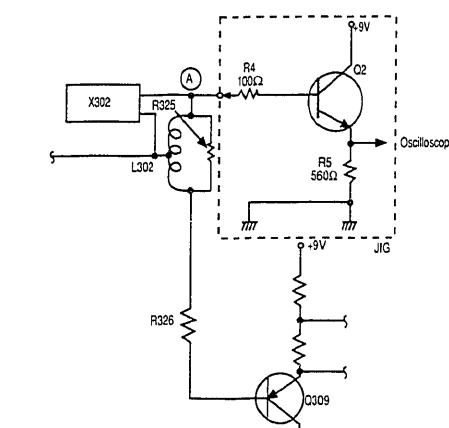

- (1) Adjust the VR(R323, R32E, R333) to center position.

- (2) Receive Color Bar Signal or Green Single Color Using below methods (I) and (II).

- (I) From Video Input

- (II) Ant. Input: the range of signal strength must be 65dBm to 80dBm(75 dBm is standard).

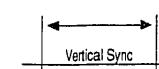

- (3) Connect the jig (shown below) to point A.

##### Adjustment Procedure

- (1) Turn R323 so that the sub-carrier component becomes minimum.
- (2) Then turn R302 so that the sub-carrier component becomes minimum.

Note: Sub-carrier component waveform shows below point.

- (3) When Residual Chroma Level does not become less than 20mVp-p repeat items (1) and (2).

##### Remarks:

- (1) Use the probe of 10:1.
- (2) Adjust the range of Oscilloscope to 20mV/div.
- (3) Residual Chroma Level should be less than 20mVp-p.
- (4) Connect the jig and PW.B by lead wire of minimum length, to prevent a defective oscillation.
- (5) Adjustment should be done after a certain time (more than 10 sec) after power ON.

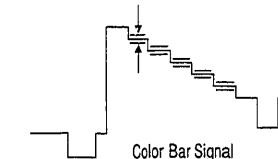

#### 1-2. COMB FILTER ADJUSTMENT(2)

##### Adjustment Preparation

- (1) Connect an Oscilloscope between Q303 Emitter and Earth.

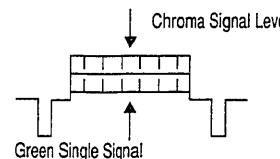

##### Adjustment Procedure

- (1) Turn R32E so that the sub-carrier component becomes minimum.
- (2) Then turn R333 so that sub-carrier component becomes minimum.
- (3) When item (2) is finished, turn R32E again so that the sub-carrier component becomes minimum.
- (4) When Residual Chroma Level does not become less than 15mVp-p, repeat items (1) and (2).

**Remarks:**  
 (1) Adjust the range of Oscilloscope to 50mV/div.  
 (2) Residual Chroma Signal Level should be less than 15mVp-p.

**Note:** Chroma Signal Level shows below point.

### 1-3. DEFLECTION CIRCUIT PICTURE ADJUSTMENT OPERATION CHECK

#### 1-3-1. Vertical Size Adjustment (R62A)

##### Adjustment Preparation

- (1) Receive Circle Pattern Signal.
- (2) Set "CONTRAST" to maximum and "BRIGHTNESS" to the center.

##### Adjustment Procedure

- (1) Adjust Vertical Size Adjustment VR (R62A) so that the inner circle of Circle Pattern becomes in contact with the top and bottom of the screen.

#### 1-3-2. Side Pin Distortion Coarse Adjustment (R752)

##### Adjustment Preparation

- (1) Receive Circle Pattern Signal.
- (2) Set "CONTRAST" to maximum and "BRIGHTNESS" to the center.

##### Adjustment Procedure

- (1) Vary R752 so that the right and left vertical lines are straight.

#### 1-3-3. Horizontal Size Adjustment (R755), Horizontal Center Adjustment (R704) and Horizontal Size Correction Adjustment (R775)

##### Adjustment Preparation

- (1) Receive Circle Pattern Signal.
- (2) Set "CONTRAST" to maximum and "BRIGHTNESS" to the center.

##### Adjustment Procedure

- (1) Set the R775 at the counterclockwise end.
- (2) Vary R755 so that the horizontal size markers at the right and left end are 1.0 - 1.0 on the average.
- (3) Vary R775 so that the horizontal size markers at right and left are 1.5-1.5 on the average.
- (4) Vary R704 so that the difference of the horizontal size markers at the right and left end are within 1.5.

#### 1-3-4. High Voltage Limiter Circuit Operation Check and Overvoltage Protection Circuit Operation Check

##### Adjustment Preparation

- (1) Connect a High Voltage Voltmeter between CPT Anode terminal (Anode cap side) and the Ground (TP701).
- (2) Set AC input voltage to 120 ± 3V.
- (3) Receive Circle Pattern and set "BRIGHTNESS" and "CONTRAST" to maximum. Adjust SCREEN VR and SUB-BRIGHTNESS VR(R340) so that Beam Current is  $I_B = \pm 0.1mA$ . (The voltage of ABL terminal - C747 both ends should be 12V or less)

##### Adjustment Procedure

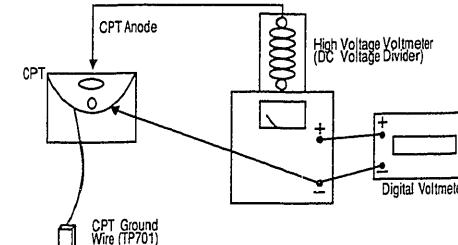

- (1) Check that the normal High Voltage is  $E_H \pm 1kv$ .

CHASSIS	EH	IB ± 0.1 mA	E1 (KV)
CZ41	30.2KV	1.8mA	35.5KV
CY44, CY45	29.2KV	1.65mA	34.0KV
C743, C744, C745	28.0KV	1.5mA	33.0KV

#### 1-3-5. FBT Protection Circuit Operation Check

##### Adjustment Preparation

- Set AC input voltage to  $100 \pm 5V$ . Then short-circuit both ends of R903.

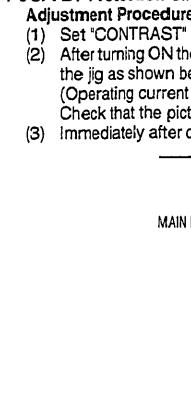

Use a Voltmeter with input impedance 10M ohm or more with indication to the 1st decimal place.

##### Adjustment Procedure

- Keep CONTRAST, BRIGHTNESS, and SCREEN VR as in item (3). Increase AC input voltage gradually, and check that the picture disappears when high voltage is E1. Immediately after checking that it disappears, turn OFF the set switch. Remove adjustment jig and High Voltage Voltmeter.

When connecting or removing High Voltage Voltmeter to or from Anode cap, be sure to turn OFF the switch of the set. Also, be sure to perform it after the chassis discharge residual High Voltage, because the high voltage of CPT Anode may be left.

#### 1-3-6. +15V Short Protection Circuit Check.

##### Adjustment Preparation

- Connect a High Voltage Voltmeter between CPT Anode terminal (Anode cap side) and the Ground (TP701).
- Set AC input voltage to  $120 \pm 3V$ .

##### Adjustment Procedure

- Receive Circle Pattern and set "BRIGHTNESS" and "CONTRAST" to maximum. Adjust SCREEN VR and SUB-BRIGHTNESS VR(R340) so that Beam Current is  $I_B = \pm 0.1mA$ .
- Disconnect resistor immediately.

#### 1-3-7. Load Reduction Circuit Operation Check.

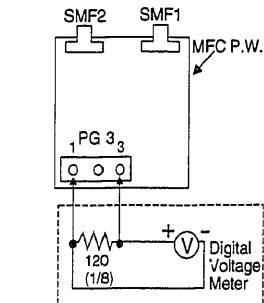

##### Adjustment Preparation

- Receive Circle Pattern Signal.
- Set "VIDEO" Mode "CONTRAST" to maximum, "BRIGHTNESS" to center.
- Connect a DC Voltmeter to both sides of R912.
- Check to make sure the potential difference is more than 10V.
- Receive Crosshatch Signal.
- Set "VIDEO" mode "CONTRAST" to minimum, "BRIGHTNESS" to center.
- Check the potential difference is less than 3V.

#### 1-3-8. MFC Circuit Operation Check (35TX10B/CZ41 Only)

##### Adjustment Preparation

- Receive Circle Pattern.
- Connect the Jig (shown below) to the PG3 Pin in MFC. P.W.B.

##### Adjustment Procedure

- Then turn SMF1 to "STRONG", turn SMF2 to "NORTH", check that the voltage is  $V = +2.9 \pm 0.5V$ .
- Then turn SMF1 to "WEAK", check that the voltage is  $V = +1.5 \pm 0.5V$ .
- Then turn SMF2 to "SOUTH", check that the voltage is  $V = -2.9 \pm 0.5V$ .
- Then turn SMF1 to "WEAK", check that the voltage is  $V = -1.5 \pm 0.5V$ .
- Then turn SMF2 to "E/W", check that the voltage is  $V = 0V$ .

#### 1-4. MEMORY INITIALIZE

##### 1-4-1. Timer Sound Operation Check

##### Adjustment Procedure

- Press the memory initialize key with the Remo-Con Jig.
- After 5 sec. operation, check that the set has selected CH 03 and a "beeping" sound comes out from the left side (L-CH).

**Note:** Do not draw out the outlet within 5 second.

Do not perform any key operation, either.

After this operation, each setting should become to delivery setting automatically.

#### 1-5. AFC OPERATION CHECK

##### Adjustment Preparation

- Connect the jig shown below to the ANT Terminal.

##### Adjustment Procedure

- Receive a Standard Carrier Signal (not offset) with the channel up/down or direct selection buttons. Check that it is pulled into the standard tuning point.
- Receive an Offset Signal of  $\pm 1.5MHz$ . Check that it is pulled into the standard tuning point. (Perform the Channel Selection Operation again.)
- Receive an Offset Signal of 1.5MHz. Check that it is pulled into the standard tuning point. (Perform the Channel Selection Operation again.)

**Note 1:** Modulation signal should be used at the Circle Pattern and the Color Bar Signal.

Checking Jig (All channel converter can be used)

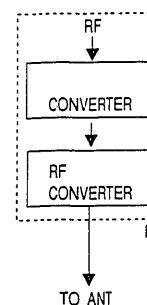

TABLE 1-6

Note: CATV Channels, actual Input Channel Numbers and Indicated Channel Numbers.

## 1-6. CHANNEL SELECTION CIRCUIT OPERATION CHECK

### 1-6-1. CHANNEL UP/DOWN Selection

#### Adjustment Preparation

- (1) Set the TV set so that VHF (CH 11, CH 13), UHF (CH 14, CH 46, CH 63) and CATV (CH A, CH E, CH P, CH W) can be received.
- (2) Set AIR/CABLE Mode to AIR.  
(Press the MENU key, and select the SETUP and AIR/CABLE Mode using the ENTER Key.)

#### Adjustment Procedure

- (1) Check that VHF are received correctly by pressing CH UP ( $\Delta$ ) or DOWN ( $\nabla$ ) control button.

#### Adjustment Preparation

- (3) Set AIR/CABLE Mode to CATV 1.

#### Adjustment Procedure

- (2) Perform the same operation as in item (1), and check that VHF and CATV are received correctly.

#### Adjustment Preparation

- (4) Set AIR/CABLE Mode to CATV2.

#### Adjustment Procedure

- (3) Perform the same operation as in item (1), and check that VHF and CATV are received correctly.

### 1-6-2. CHANNEL UP/DOWN (Inclusive of AUTOPROGRAM Operation)

#### Adjustment Preparation

- (1) Set the TV set so that VHF (CH 11, CH 13), UHF (CH 14, CH 46, CH 63) and CATV (CH A, CH E, CH P, CH W, CH A2, CH GG, CH OO, CH WW) can be received.

#### Adjustment Procedure

- (1) Set AIR/CABLE Mode to AIR.
- (2) Select AUTOPROGRAM Mode and press ( $\gg$ ) key.  
After AUTOPROGRAM operation is completed, by pressing the Channel UP ( $\Delta$ ) or DOWN ( $\nabla$ ) control button, check that the channels having Broadcast Signal(s) can be received.
- (3) Set AIR/CABLE Mode to CATV 1.
- (4) Perform the same operation as in item (2) check that CATV can be received correctly.

#### Adjustment Preparation

- (2) Set to PROGRAM LIST Mode.

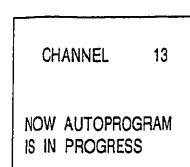

#### Adjustment Procedure

- (5) Check that the SCAN of channels which can be selected is ON.

Note 1: CATV Channels, actual Input Channel Numbers and Indicated Channel Numbers.

A .....	14
E .....	18
P .....	29
W .....	36
A-2 .....	98
GG(W+7).....	43
OO(W+15).....	51
WW(W+23).....	59

Note 2: Display while AUTOPROGRAM is operating.

(See Table 1-6 on Bottom of Previous Page)

### 1-6-3. VOLUME UP/DOWN

#### Adjustment Procedure

- (1) Check that the Sound Volume Level and Volume Indication is going up or down continuously by pressing Sound Volume UP ( $\Delta$ ) or DOWN ( $\nabla$ ) control button.

### 1-6-4. POWER ON/OFF

#### Adjustment Procedure

- (1) Check that the Power alternates between ON and OFF by alternately pressing the POWER button.

### 1-6-5. AVX

#### Adjustment Procedure

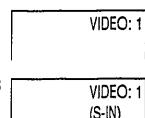

- (1) Check that the O.S.D. by the every press of the AVX button, such as below.

(CZ41/CY45/CY44/C745/C744)

Receiving CH → VIDEO: 1

→ VIDEO: 1 (S-IN) → VIDEO: 2 → VIDEO: 3

→ Receiving CH

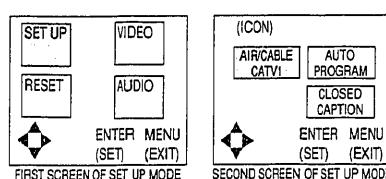

### 1-6-6. MENU (NOT FOR 35TX10B/CZ41)

#### Adjustment Procedure

- (1) Check that the MENU O.S.D. displays by pressing MENU button on the Front Panel Control.

Note: MENU O.S.D. is displayed below:

### 1-6-7. MENU Mode (Using Remo-Con Jig)

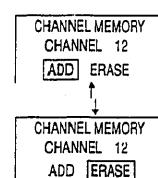

#### 1-6-7-1. SET UP Mode.

#### Adjustment Preparation

- (1) Set to CHANNEL MEMORY Mode.

#### Adjustment Procedure

- (1) Check that the ADD,ERASE is selected by pressing the ( $\gg$ ) or ( $\ll$ ) control button.

### Adjustment Preparation

- (2) (a) Set the Mode to CLOSED CAPTION.  
(b) Receive a Broadcast Signal having a CLOSED CAPTION signal.

#### Adjustment Procedure

- (1) Set DISPLAY setting to ON by pressing ( $\gg$ ) or ( $\ll$ ) control button. At this time, set the other settings as follows:

1. DISPLAY: ON
2. MODE: C.C.
3. CHANNEL: 1

- (2) Check that the CAPTION corresponding to the above setting is displayed on the screen.

Set CHANNEL to 2.

- (3) Check that the CAPTION of CHANNEL 2 is displayed on the screen.

Set CHANNEL to 1.

- (4) Check that the CAPTION of CHANNEL 1 (FIELD 2) is displayed on the screen.

Set the mode to TEXT.

#### Adjustment Procedure

- (8) Check that a black window appears and TEXT letters are displayed at the center of the screen.

- (9) Repeat adjustment procedure from (3) to (6) and check that TEXT letters are displayed corresponding to each Mode.

(10) Set the Mode to CAPTION.

- (11) The black window should disappear returning to the state of (2).

(12) Set ON/OFF to OFF.

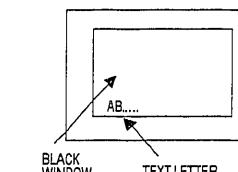

- (13) Check to be sure that the CAPTION letters disappear.

#### Remarks:

Note: Reading error should not occur on every mode.

The contents of error:

1. Wrong letters are displayed.
2. Letter omitting.
3. Other abnormal display.

### 1-6-7-2. PROGRAM Mode.

#### Adjustment Preparation

- (2) Set to CHANNEL CAPTION Mode.

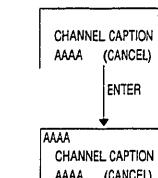

#### Adjustment Procedure

- (1) Select the "A" by pressing the ( $\Delta$ ) or ( $\nabla$ ) control button, and select the input position by pressing the ( $\gg$ ) or ( $\ll$ ) control button.

- (2) After pressing the ENTER button, check that the indication of "AAAA" is the same as CH No. indication.

- (3) Select the CHANNEL CAPTION Mode again, select the "CANCEL" by pressing the ( $\gg$ ) or ( $\ll$ ) control button and the ENTER button.

- (4) Check that the "AAAA" is deleted when the CH No. is indicated, after pressing the "MENU" button.

### Adjustment Preparation

- (3) Set to CHILD LOCK Mode.

#### Adjustment Procedure

- (1) Select CHILD LOCK SET by pressing the ( $\gg$ ) or ( $\ll$ ) control button.

(2) Press "0" button 3 times. ("000" is input)

(3) Check that the picture becomes pitch-dark, and sound does not come out.

(4) Set to CHILD LOCK Mode again, and select "CHILD LOCK CANCEL" by pressing the ( $\gg$ ) or ( $\ll$ ) control button.

(5) Press "0" button 3 times. ("000" is input.)

(6) Check that the picture and sound return to the previous condition.

#### Adjustment Preparation

- (4) Set VOLUME CORRECTION Mode.

#### Adjustment Procedure

- (1) Select the registration point using the ( $\Delta$ ) or ( $\nabla$ ) control button and the received Channel No. is memorized by pressing the ENTER button.

- (2) Check that Volume Level changes and sets 100%-50% (5% step) using ( $\gg$ ) or ( $\ll$ ) control button.

### 1-6-7-3. CLOCK Mode (Clock Operation Check)

#### Adjustment Preparation

- (1) Connect a Diode (IS2076, ISS270TA equivalent) between C and B.

R068 R004

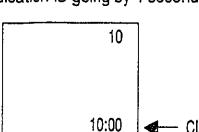

(The other side of I001)

Remarks: The addition of the above diode intends to check the operation with clock counting operation as 60 time mode.

- (2) Set to CLOCK SET Mode.

#### Adjustment Procedure

- (1) After clock setting is done and the indication disappears, perform CH indication. Check that clock indication is displayed in addition to the CH indication, and that the clock indication is going by 1 second per minute.

### 1-6-7-4. PICTURE Mode

#### Adjustment Preparation

- (1) Receive the Color Bar Signal.

- (2) Set to CONTRAST Mode.

#### Adjustment Procedure

- (2) Check that CONTRAST is changed by pressing ( $\ll$ ) or ( $\gg$ ) control buttons.

$\gg$ ; BRIGHTER  
 $\ll$ ; DARKER

#### Adjustment Preparation

- (3) Set to COLOR Mode.

#### Adjustment Procedure

- (3) Check that COLOR is changed by pressing ( $\ll$ ) or ( $\gg$ ) control buttons.

$\gg$ ; MORE GREEN  
 $\ll$ ; MORE RED

**Adjustment Preparation**

- (4) Set to TINT Mode.

**Adjustment Procedure**

- (4) Check that TINT is changed by pressing (◀) or (▶) control buttons.

▶ ; DEEPER  
◀ ; LIGHTER

**Adjustment Preparation**

- (5) Set to BRIGHTNESS Mode.

**Adjustment Procedure**

- (5) Check that BRIGHTNESS is changed by pressing (◀) or (▶) control buttons.

▶ ; BRIGHTER  
◀ ; DARKER

**Adjustment Preparation**

- (6) Set to SHARPNESS Mode.

**Adjustment Procedure**

- (6) Check that SHARPNESS is changed by pressing (◀) or (▶) control buttons.

▶ ; CLEARER  
◀ ; SOFTER

**Adjustment Preparation**

- (7) Set to WHITE CONTROL Mode.

**Adjustment Procedure**

- (7) Check that WHITE CONTROL is changed by pressing (◀) or (▶) control button.

▶ ; OFF (STD.)  
◀ ; ON (COOL)

**Adjustment Preparation**

- (8) Set to RESET Mode.

**Adjustment Procedure**

- (8) Check that all picture setting modes return to delivery settings by pressing the ENTER button.

**1-6-7-5. SOUND Mode****Adjustment Preparation**

- (1) Set to BALANCE Mode.

**Adjustment Procedure**

- (1) Check that BALANCE is changed by pressing control (◀) or (▶) control buttons.

▶ ; RIGHT  
◀ ; LEFT

**Adjustment Preparation**

- (2) Set to BASS Mode.

**Adjustment Procedure**

- (2) Check that BASS is changed by pressing control (◀) or (▶) control buttons.

▶ ; STRONG  
◀ ; WEAK

**Adjustment Preparation**

- (3) Set to TREBLE Mode.

**Adjustment Procedure**

- (3) Check that TREBLE is changed by pressing control (◀) or (▶) control buttons.

▶ ; STRONG  
◀ ; WEAK

**Adjustment Procedure**

- (4) Set to RESET Mode.

**Adjustment Procedure**

- (4) Check that all sound setting modes return to delivery settings by pressing ENTER button.

**Adjustment Preparation**

- (5) (a) Set to "VOLUME" step at \*10. Set to "BASS" and "TREBLE" at center when "LOUDNESS" is turned OFF. Set to "LOUDNESS" Mode.  
(b) Set "LOUDNESS" to OFF, and "BASS/TREBLE" to center.  
(c) Set it to LOUDNESS Mode.

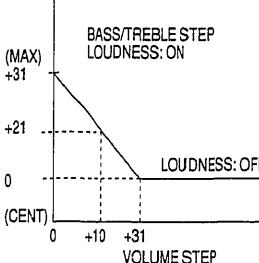

**Adjustment Procedure**

- (5) Check that "BASS" and "TREBLE" are changed as below table when set to "LOUDNESS" is turned ON by pressing (◀) or (▶) control button "LOUDNESS" turn OFF after checked.

LOUDNESS	BASS	TREBLE
OFF	CENTER	
ON	+21 STEP	

(When VOLUME st 10)

\*Note: According to Volume Setting Level, this function works as shown in below figure.

**Adjustment Preparation**

- (6) (a) Input Stereo Sound Signal to VIDEO:1 terminals, and set "VIDEO:1" by AVX button.  
(b) Set to SURROUND Mode.

**Adjustment Procedure**

- (6) Check that sound is change more loudly when set to MUSIC or MOVIE Mode by pressing (◀), (▶), (▲) or (▼) control button.

**Adjustment Preparation**

- (7) (a) Input Monoaural Sound Signal to VIDEO:1 "L" terminal and set "VIDEO:1" by AVX button.  
(b) Set to SURROUND Mode.

**Adjustment Procedure**

- (7) Check that sound is change more loudly when set to SIMULATE mode by (◀), (▶), (▲) or (▼) control button.

**1-6-7-6. RESET Mode.****Adjustment Preparation**

- (1) Set PICTURE Setting to minimum "CONTRAST" and SOUND setting to "BALANCE" to left.  
(See item 1-6-7-4 and 1-6-7-5.)  
(2) Set to RESET Mode.

**Adjustment Procedure**

- (1) Check that Picture and Sound performance return to delivery setting by pressing the ENTER button.  
(CONTRAST to maximum, BALANCE to center)

**1-6-7-7. FAVORITE CHANNELS Mode.****Adjustment Preparation**

- (1) Set to FAVORITE CHANNELS Mode by pressing one of (◀), (▶), (▲) or (▼) control buttons.

**Adjustment Procedure**

- (1) Select registration position using (◀), (▶), (▲) or (▼) control buttons, and check that the Channel No. selected is registered by pressing the ENTER button.  
Note: 16 stations could be registered.

- (2) After Normal Mode is set using the MENU button, check that the Registered Channel can be selected by using (◀), (▶), (▲) or (▼) control buttons.  
Note: The selected channel is received after 0.5 seconds.

**1-7-1. REMO-CON OPERATION CHECK**

The Remo-Con check jig should be used for Remo-Con operating range and Remo-Con operation check.

**1-7-1. Direct Channel Selection****Adjustment Procedure**

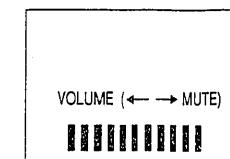

- (1) Input 2 or 3 digits of Channel Number with the buttons of the Remo-Con check jig "0 - 9" and "100". Check that the input number and the On-Screen Display number are the same.

**1-7-2. LST-CH (Last Channel Recall)****Adjustment Procedure**

- (1) Check that the set receives alternately between the channel which is being received and the channel which was received just before now by alternately pressing the "LST-CH" button of the Remo-Con check jig.

**1-7-3. MUTE****Adjustment Procedure**

- (1) Check that the sound alternates between Mute and Mute Free by alternately pressing the "MUTE" button of the Remo-Con check jig. At this time, check that the indication color alternates between yellow (letters:green) and magenta.

Yellow → Magenta → Yellow  
Letters: (green) (green)

**1-7-4. RECALL****Adjustment Procedure**

- (1) Check that On-Screen Display Channel No. indication alternates between ON and OFF by alternately pressing the "RE-CALL" button of the Remo-Con check jig.

**1-7-5. P in P (CZ41, CY45, CY44, C745, C744)****Adjustment Preparation**

- (1) Connect the signal to ANT and receive it.  
(2) Connect the signal to VIDEO: 1.

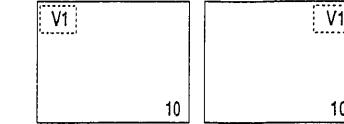

Note: At this CASE, sub-picture should be V1.

**Adjustment Procedure**

- (1) Check that, by alternately pressing the "P in P" button of Remo-Con check jig, sub-picture alternates between ON and OFF. When sub-picture is ON, check that the Channel No. and "V1" are displayed.

**1-7-6. SHIFT****Adjustment Preparation**

- (1) Press "P in P" button to set to P in P Mode.

**Adjustment Procedure**

- (1) Check that, by alternately pressing the SHIFT button of Remo-Con check jig, sub-picture moves counterclockwise. At this time, check that "V1" of sub-picture also moves as well.

- Note: When sub-picture is in the upper of the screen, the Channel No. of main picture comes to the lower right.

**1-7-7. EXCHANGE****Adjustment Preparation**

- (1) Press "P in P" button to set to P in P Mode.

**Adjustment Procedure**

- (1) Check that, by alternately pressing the "EXCHANGE" button, the contents of main picture and sub-picture are exchanged.

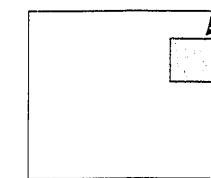

**1-7-8. FREEZE****Adjustment Preparation**

- (1) Connect the signal to ANT and VIDEO: 1.  
(One or both of the pictures should be moving picture.)

- (2) Press "P in P" button to set to P in P Mode.

- (3) Sub-picture should be moving picture by "EXCHANGE" button.

MOVING PICTURE ← → FREEZING PICTURE

- (2) Press "P in P" button to make sub-picture disappear.

**1-7-9. FREEZE (P in P OFF)****Adjustment Preparation**

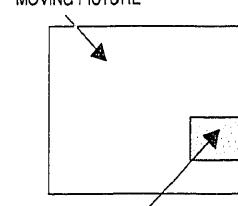

- (1) Connect signals to ANT and VIDEO: 1. Both signals should be moving picture.  
(2) Set P in P to OFF.

**Adjustment Procedure**

- (1) Check that freezing picture of main screen appears by pressing the FREEZE button of the Remo-Con check jig.  
(2) Check it also in the TV and VIDEO: 1 modes.  
(3) Check that sub-picture disappears by pressing the FREEZE button at picture freezing.

- (4) Check that it turns to normal P in P sub-picture by pressing the P in P button at picture freezing.

MOVING PICTURE

FREEZING PICTURE

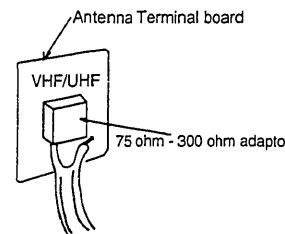

**1-8. Weak Electric Field Check****Adjustment Preparation**

- (1) Connect one side of the 300 ohm feeder to 75 ohm - 300 ohm antenna adaptor. Connect the antenna adaptor to the VHF antenna terminal board as shown.

- (2) Turn to No Signal Condition.

#### Adjustment Procedure

- (1) Check that oscillation and abnormal beat etc. does not occur in any of the channel.

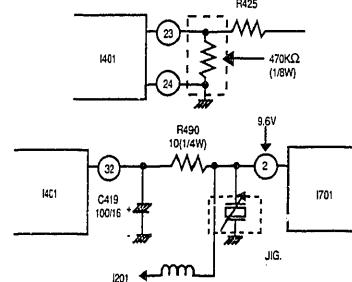

#### 1-9. MTS Demodulating Circuit Adjustment

##### 1-9-1. Stereo VCO Adjustment (R423)

###### Adjustment Preparation

- (1) Same as items 1-9-2 (1) and (2).
- (2) Connect I401 pin 23 to pin 24 through 470KΩ resistance as shown in the figure.
- (3) Connect a Frequency Counter to I401 pin 41. Use the probe of 1 : 1.  
(Probe standard  $R_i \geq 1$  M ohm,  $C_i \leq 15\text{pF}$ )
- (4) Input of I401 pin 39 is no signal.
- (5) Apply  $+9.6V \pm 0.1V$  to the pin 2 of I701 as shown in the figure. (I401 +B)

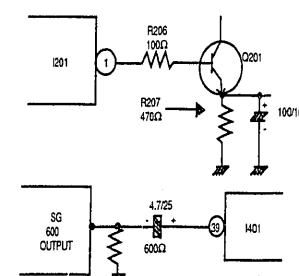

###### Adjustment Procedure

- (1) Turn VR(R423) to set to  $15.73 \pm 0.01\text{kHz}$ .
- (2) After the adjustment, remove the 470KΩ (Between pins 23 - 24 of I401)

##### 1-9-2. Filter Adjustment VR(R418)

###### Adjustment Preparation

- (1) Set VR(R41K) fully counterclockwise.
- (2) Set Q201 Emitter to GND through capacitor 100uF/16V as shown in the figure.
- (3) Apply the signal to I401 pin 39 with the jig shown as follows.

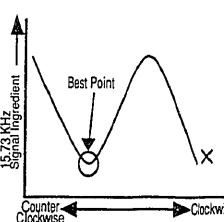

##### a SG Output Signal Specification

- (1) FREQUENCY  
 $f = 15.73\text{ kHz}$  (Sine Wave)
- (2) Signal Level  
 $V = 100\text{mVrms}$

(4) Connect an Oscilloscope to I401 pin 35 (L-R out).

#### Adjustment Procedure

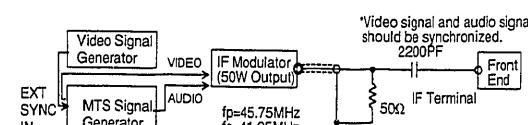

- (1) Input signal (a) and adjust VR(R418) so that the waveform of pin 35 (15.73kHz included) is minimum.

#### 1-9-3. Input Level Adjustment VR(R41K)

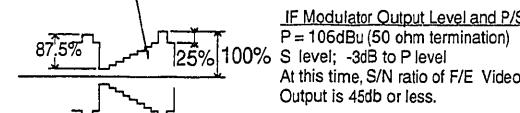

###### Adjustment Preparation

- (1) Apply the signal to TUNER (U101) IF output terminals of MAIN PWB using the jig shown below.

##### IF Modulator output signal waveforms (Color Bar or All White)

##### (Color bar or all white)

##### Sound Modulation Condition

- Noise Reduction Encoder: ON

- Stereo Signal: (1) R = 0(L only), 300Hz, 30% modulation (Note 2)\*  
(2) R = 0(L only), 3kHz, 30% modulation (Note 2)\*

- Monoaural Signal: (3) Monoaural, 400Hz 100%; modulation (PRE-EN OFF)

- SAP Signal: (4) SAP, 300Hz 30% modulation (Note 2)\*

- (2) Connect AC Voltmeter Vo to I401 pin 39.
- (3) Same as Item 1-9-1 (5) (Apply +B to I401)
- \* Refer to next page.

#### Adjustment Procedure

- (1) Select Sound Input Signal (3) and adjust VR(R41K) to  $Vo = 150\text{mVrms} \pm 5\text{mVrms}$ .

#### 1-9-4. Separation Adjustment VR(R429, R42A)

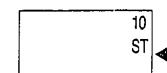

(The adjustment of items 1-9-1. thru 1-9-3. should have been finished.)

###### Adjustment Preparation

- (1) Use the same jig as Input Level Adjustment.  
(Be sure to remove the AC Voltmeter connected to I401).
- (2) Connect an Oscilloscope to I401 pin 4.
- (3) Same as in items 1-9-3 (3) and (4).
- (4) Set "MTS MODE" to "STEREO".

#### Remarks:

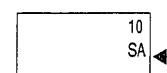

Pay attention that the separation adjusting point may be deviated if the Input Level is not regularly adjusted.

Check that "ST" is indicated in red under CH indication by pressing RECALL key of Remo-Con check jig.

**Note 1:** Use the Sound Modulator the frequency characteristic of which should be within  $\pm 1\%$  during 50Hz - 100kHz.

**Note 2:** Turn OFF the Noise Reduction Encoder (NR) and set the modulation degree to 30%, and then turn ON the NR. Set the modulation degree at the output of low frequency Signal Generator. Leave the Sound Modulator VR of the IF modulator as it is.

(SAP receiving check)  
Check that SA is indicated in red under CH indication by pressing RECALL key of Remo-Con check jig.

#### Adjustment Procedure

- (1) Select Sound Input Signal (1) and adjust VR(R42A) so that 300 Hz level is minimum.
- (2) Select Sound Input Signal (2) and adjust VR(R429) so that 3kHz level is minimum.

- (3) Repeat (1) and (2).

Adjustment precision: within  $\pm 1\text{dB}$  from minimum point.

#### 1-9-5 SAP Receiving Check

- ##### Adjustment Preparation
- (1) Same as in items 1-9-4. (1) - (4).
  - (2) Set to "MTS MODE" to "SA".

#### Adjustment Procedure

- (1) Select Sound Input Signal (1) and designate the Output Level as Vst.
- (2) Then select Sound Input Signal (4) and check that the Output level is almost the same as Vst.

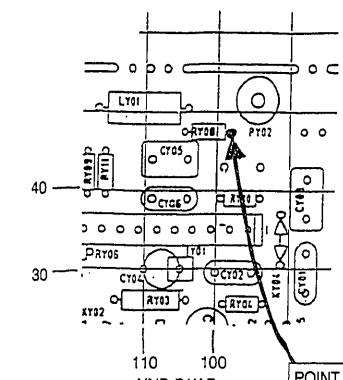

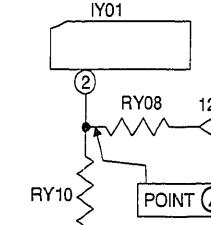

#### 1-10. YNR Operation Check (35TX10B/CZ41)

###### Adjustment Preparation

- (1) Receive Circle Pattern

###### Adjustment Procedure

- (1) Connect the DC Voltmeter to point (A) of YNR P.W.B. and check that the DC Voltmeter is  $9.3V \pm 0.3V$ .

## 2. FINAL ADJUSTMENT/COMMON SERVICE ADJUSTMENT

### 2-1. Purity Convergence Adjustment

Note: For A78LCU30X (HITACHI 31V Dark Tint), A68KSA30X (HITACHI 27V Dark Tint), M78JUA165X (31V Dark Tint), M68JUA168X (27V/Dark Tint) applies to item 2-1-1(8). For ITC TYPE A89AEJ15X01 (35V Dark Tint) only applies to item 2-1-1 (8) (PURITY Check).

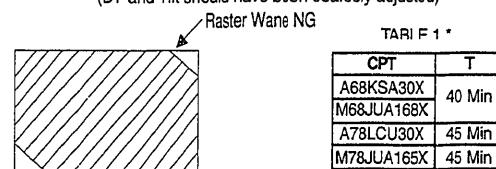

#### Preparation of Adjustment

- (1) Keep DY attached to CPT funnel.
- (2) Turn ON the set and receive Crosshatch Signal (or Circle Pattern Signal). Adjust the Static Convergence coarsely according to item 2-1-3.
- (3) Receive Circle Pattern Signal and adjust the White Balance according to item 2-4.
- (4) Set BRIGHTNESS control and CONTRAST control to maximum, and heat-run the set with Circle Pattern Signal received for 40 minutes or more.

#### 2-1-1. Purity Adjustment

**THIS ADJUSTMENT METHOD APPLIES TO THE PURITY ADJUSTMENT BY USING MICROSCOPE**

- (1) Adjust coarsely White Balance, Static Convergence (center) and Focus.
- (2) Receive Circle Pattern and heat-run more than T minutes with CONTRAST and BRIGHTNESS maximum. Do not delete the raster nor vary the current before fixing the position of DY. Heat-run should be done with perfect raster. (DY and Tilt should have been coarsely adjusted)

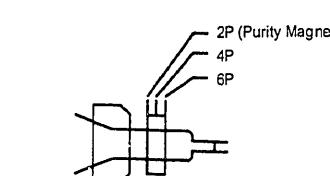

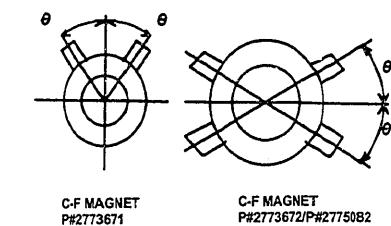

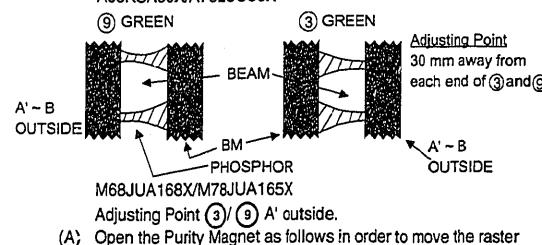

- (3) The magnetic field in the artificial magnetic field should follow the table below and the set should face as table 2. Degauss it from the outside.

DESTINATION	VERTICAL FIELD	HORIZONTAL FIELD
USA	0.45 G	0.3 G
CANADA	0.54 G	0.15 G
UNIVERSAL	0.35 G	0.3 G
PANAMA, HAWAII	0.2 G	0.3 G
TAIWAN	0.22 G	0.37 G

TABLE 2. Directions for adjustment

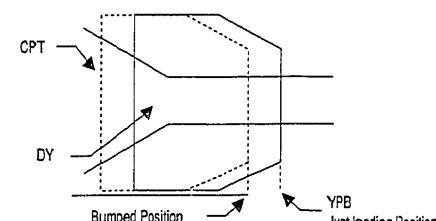

A68KSA30X	North
M68JUA168X	
A78LCU30X	North
M78JUA165X	North

- (4) Adjust the position of Purity Magnet and DY, keep the landing balance of ③ and ⑨, and adjust so that the landing of ③ and ⑨ is as follows while observing with a microscope. A68KSA30X/A78LCU30X

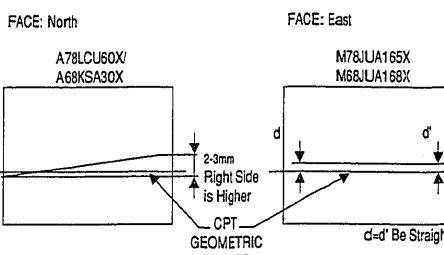

- (B) YPB (Yoke Pull-Back) should be as follows. (Distance between the bumped position of DY toward the funnel and the just-landing position of ③ and ⑨.)

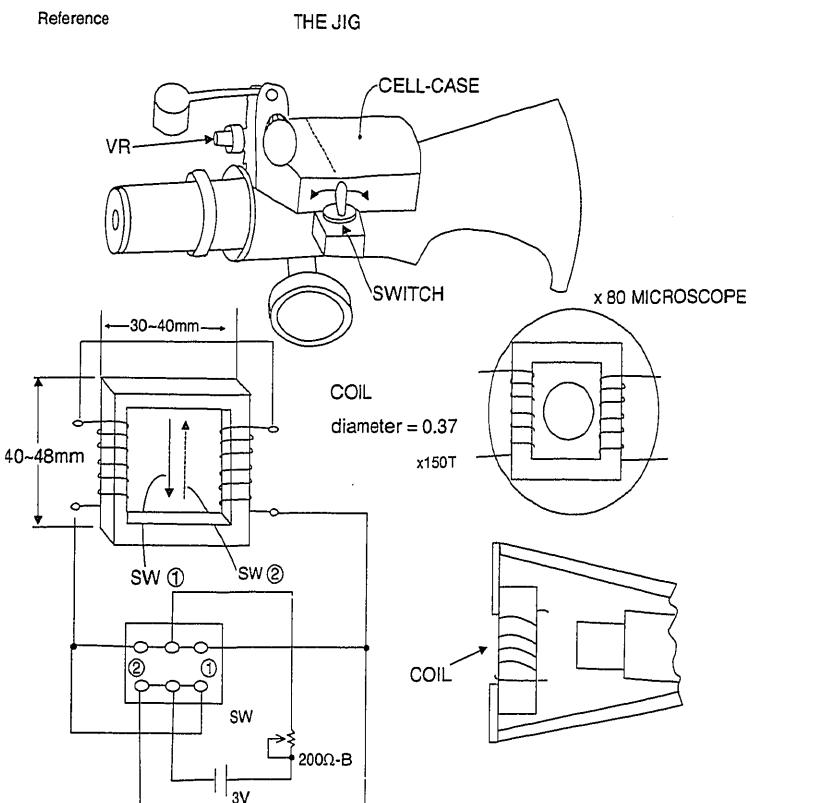

CPT	YPB (DESIGN CENTER)
A68KSA30X	2.44mm
M68JUA168X	
A78LCU30X	2.2mm
M78JUA165X	2.2mm

- (C) DY Tilt should be as follows:

- (5) Fix DY with fixing torque of 14kg.cm. Control the torque by an electrical driver.
- (6) If any mislanding occurs, correct with magnets. At this time, if the white unevenness is all right, any magnet is not needed.
- (7) After peripheral convergence is adjusted, check the position of DY and tighten the DY again. (14kg.cm)

Fix coil to CRT side of microscope. Set it up side down and measure it.. Check that beam moves to the right and left equally in quantity.

#### (8) Purity Check

The magnetic field in the artificial magnetic field should follow the magnetic field according to the destination, and the set should face as follows. After degaussing in each direction, check these items visually and with a microscope.

- (A) No problem in white unevenness.
- (B) Each single color must not hit any other colors.
- (C) If white or each single color is defective, apply a magnet (S) on CPT for correction.

If any magnet is applied, check it after degaussing.

CPT	CHECK FACE
M68JUA168X	SOUTH, NORTH

A89AEJ15X01	SOUTH, NORTH

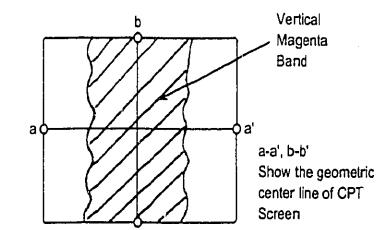

Fig. 2-1-2-1

#### 2-1-2. Purity Adjustment (THIS ADJUSTMENT METHOD APPLIES TO THE HAND-OPERATED PURITY ADJUSTMENT.)

- (1) Use the Earth's magnetic field (Location of the set).
- (2) Adjust Focus coarsely according to item 2-2.
- (3) Adjust Convergence coarsely according to item 2-1-4.
- (4) Receive Circle Pattern Signal and check that CONTRAST and BRIGHTNESS are maximum.
- (5) Receive Magenta Signal. When the Magenta Signal is not available, short-circuit between the Base and Emitter of Q855 to set to Magenta.
- (6) Press DY fully against CPT funnel and turn the Purity Magnet so that the Vertical Magenta Band comes to the center of the picture. (Fig. 2-1-2-1) Check that color unevenness of both sides are approximately equal at this time. The openings of the Purity magnet should be symmetric.

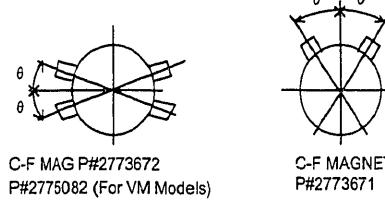

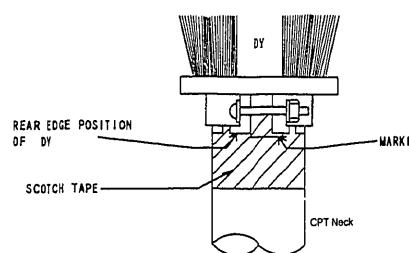

Fig. 2-1-2-2

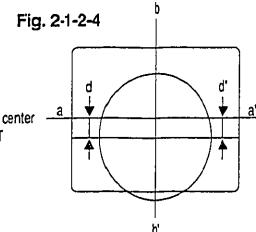

The openings of purity magnet should be symmetric on the right and left sides (P#2773671) and on the upper and lower sides (P#2773672), (P#2775082).

- (7) Receive the Single Red Signal.  
When the Single Red Signal is not available, short-circuit between the Base and Emitter of Q854, and between the Base and Emitter of Q857 to set to Single Red Signal.
- (8) Pull back DY gradually and when the color unevenness of both sides of the picture disappear, mark the rear edge position of DY on the tape wound around CPT neck as shown in Fig. 2-1-2-3. Pull back DY further and just before the color unevenness starts to appear on both sides of the picture, mark the rear edge position of DY on the tape by the same way. At this time, pull back DY so that the center axis of DY and CPT axis match.

Fig. 2-1-2-3

- (9) Move DY so that the rear edge position of DY comes to the center of the two marked lines and fasten DY as  $d = d'$ . (Fig. 2-1-2-4). Further insert the rubber wedge between DY and CPT funnel from the top and raise DY backwards.

- (10) Set CPT axis direction magnetic field according to the Earth's magnetic field setting.  
(The direction of the magnetic field should be from the CPT screen side to the neck side.)
- (11) After degaussing it from outside, check the Purity in each color of R, G and B visually. Then, turn the screen to White and check the landing at the screen position shown in Fig. 2-1-2-5 with a microscope.

#### Criteria with microscope

There should be no mislanding at positions 2-4-8 and 10. (Refer to the mislanding criteria)  
Green beam should be at the center of the green phosphor at position C.

- (12) Turn over the direction of CPT axis direction magnetic field of the Earth's magnetic field and check it by the same C way as item (11). The positions of mislanding criteria with microscope should be 2, 4, 8 and 10. (Fig. 2-1-2-5)

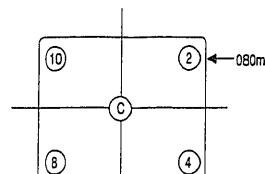

Fig. 2-1-2-5

#### Mis-Landing Criteria

The following conditions are defined as mislanding. Each color beam shines on the phosphor of the applied color and there are phosphor parts which are not luminous (shaded parts in the Fig. 2-1-2-6) between the luminous part and black matrix or each color beam shines on the phosphor of not applied color.

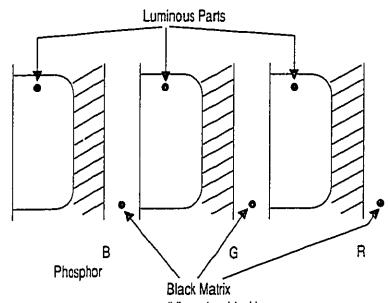

Fig. 2-1-2-6 Enlarged view of screen with microscope

- (13) To improve the mislanding mentioned above, it's acceptable to stick the permanent magnet to CPT funnel. (Fig. 2-1-2-7 and Fig. 2-1-2-8)

#### Usage

Apply a silicone rubber KE-40 WRTV to the permanent magnet shown in the Figure 2-1-2-8., adhere it to CPT funnel and then fix it with permaseal tape.

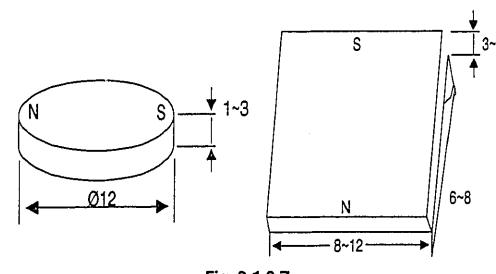

Fig. 2-1-2-7

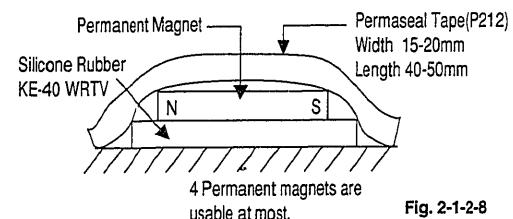

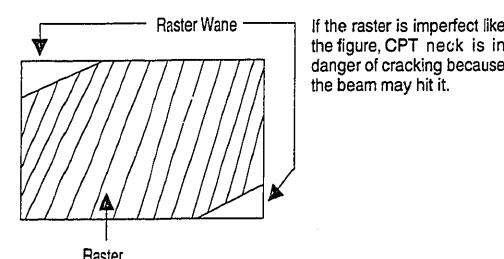

Fig. 2-1-2-8

#### Notes for pre-heat

Before pre-heating, stick DY to CPT funnel and fix it so that the raster is perfect.

#### 2-1-3. Static Convergence Adjustment (Screen Center Part) (Except ITC CPT)

- (1) Receive the Crosshatch Signal and set BRIGHTNESS to center, CONTRAST to minimum.

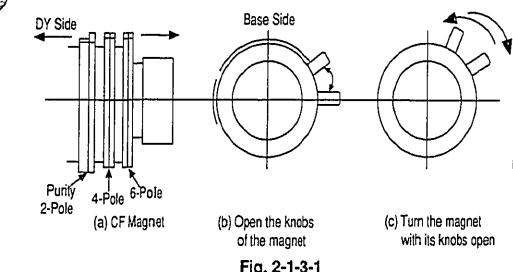

Fig. 2-1-3-1

Open the knobs of 4-pole magnet (2 sheets)(Fig.2-1-3-1(b)) and match the blue/red vertical lines at the center of the screen as shown in fig. 2-1-3-2(a).

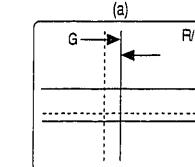

Fig. 2-1-3-2

- (3) Turn the 4-pole magnet with its knobs open (Fig. 2-1-3-1(c)) and match the blue/red horizontal lines as shown in Fig. 2-1-3-2(b).

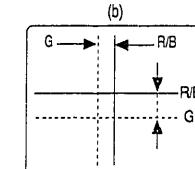

Fig. 2-1-3-2

- (4) Open the knobs of 6-pole magnet (2 sheets) and match the green vertical line at the center of the screen to the blue/red vertical lines shown in Fig. 2-1-3-2(c).

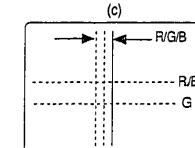

Fig. 2-1-3-2

- (5) Turn the 6-pole magnet with its knobs open and match the green horizontal line at the center of the screen to the blue/red horizontal lines as shown in Fig. 2-1-3-2(d).

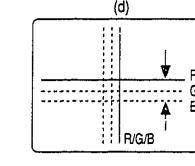

Fig. 2-1-3-2

- (6) After the adjustment of items (1) - (5), if red/blue/green (3 colors) do not match, repeat the adjustment of (1) - (5).

(7) After checking that Purity and Static Convergence are adjusted to the best condition, fix C-F Magnet with white paint.

#### 2-1-4. Dynamic Convergence Adjustment (Except ITC CPT Type)

- (1) Insert an adjustment wedge (temporary) between the top of DY opening and CPT funnel as shown in Fig. 2-1-4-1. By inserting the wedge gradually, match the red and blue vertical lines at the top and bottom of the screen and also match the red and blue horizontal lines of both sides of the screen as shown in Fig. 2-1-4-2 (a).

- (2) Adjust the swinging in the right/left directions of DY while observing 6 and 12 horizontal lines of the screen and match the red and blue horizontal lines.

As shown in Fig. 2-1-4-2 (b), when the blue is outside from the red on CPT screen, insert the DY fixing wedge between the right-side DY viewed from the rear of CPT and CPT funnel.

(3) AS shown in Fig. 2-1-4-2 (c), when the blue is inside from the red on CPT screen, insert the wedge between the left-side DY and CPT funnel.

- (4) Insert two DY fixing wedges with approx.120 to the DY fixing wedge inserted in the items (2) or (3) and remove the adjustment wedge (temporary).

Use the DY fixing wedge after peeling off the tape. After the location, press and adhere it to the funnel.

HITACHI CPT A68KSA30X, M78JUA165X, M68JUA168X, A78LCU30X

### 2-3. Deflection Circuit Picture Adjustment

#### 2-3-1. Horizontal Center Adjustment VR(R704)

##### Adjustment Preparation

- Receive Circle Pattern Signal. Set CONTRAST to maximum and BRIGHTNESS to center.

##### Adjustment Procedure

- Adjust H. size marker, turn VR(R704) to adjust difference of right and left horizontal size marker is within 0.5.

#### 2-3-2. Vertical Size Adjustment VR(R62A)

##### Adjustment Preparation

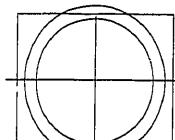

- The set should face the North or South.
- Receive Circle Pattern Signal, and set CONTRAST to maximum and BRIGHTNESS to center.

##### Adjustment Procedure

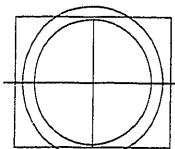

- Adjust V. size VR(R62A) so that the outer circle of the Circle Pattern is like the figure.

Note: Wait 5 minutes or more after turning the power ON to perform this adjustment.

- When the picture center is below CPT center  
Adjust so that 1/2 of the width of the outer circle comes to the top of the screen.

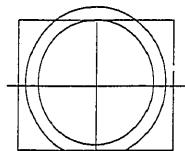

- Standard Condition  
Adjust so that the inner circle comes in contact with the top and bottom of the screen.

- When the picture center is above CPT center.

- When the picture center is 0-2 mm above CPT center, adjust so that the bottom of the inner circle comes in contact with the bottom of the screen.

#### 2-3-3. Side Pin Distortion Adjustment VR(R752)

##### Adjustment Preparation

- Receive Circle Pattern Signal and set CONTRAST to maximum and BRIGHTNESS to the point where the background is set.

##### Adjustment Procedure

- Adjust VR(R752) so that the line of the right and left is straight.

#### 2-3-4. Horizontal Size Adjustment VR(R755, R775)

##### Adjustment Preparation

- Receive Circle Pattern Signal.
- Set CONTRAST to maximum and BRIGHTNESS to center.

##### Adjustment Procedure

- Set the VR(R775) at the counterclockwise end.
- Vary VR(R755) so that the horizontal size markers at the right and left end are A - A on the average.\*
- Vary VR(R775) so that the horizontal size markers at right and left are B - B on the average.\*
- Vary VR(R704) so that the difference of the horizontal size markers at the right and left end are within 1.5.

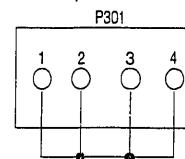

CPT SIZE	A		B					
	35V	0.5	1.0	31V	1.0	1.5	27V	1.0

\*

### 2.4. White Balance Adjustment

#### Adjustment Preparation

- Apply heat-run 10 minutes or more after the power is turned ON.
- Check that the Purity Adjustment has been completed.
- Set the vertical incident illumination on the CPT surface to 20 lux or less.
- Receive White Raster Signal.
- Set Drive Adjusting VRs (R806, R816) to the mechanical center.
- Turn Low Brightness White Balance adjusting VRs (R807, R814, R818) fully counterclockwise.
- Set the Color Temperature Control (White Control) to OFF (STD).
- Turn the SCREEN Adjusting VR fully counterclockwise.
- Short circuit TP connector pin 1-4.

#### Adjustment Procedure

- Turn the SCREEN Adjusting VR clockwise and set it to the position where the bright colored line starts appearing on CPT screen. Do not turn thereafter the Low Brightness White Balance VR (This is called VR-A) corresponding to the color first appearing. When a bright colored line does not appear, set the SCREEN VR fully clockwise.
- Turn clockwise the Low Brightness White Balance VRs except VR-A and adjust so that the red, green and blue bright colored lines appear on the screen equally.
- Remove the jig which has shorted TP connector.
- Set CONTRAST and BRIGHTNESS control to minimum and turn SUB-BLACK LEVEL VR (R340) to set at the position where the white raster is just slightly seen.
- Set the White Balance Meter at the center of the screen.
- Adjust CONTRAST control so that the indication of the Brightness Meter is 80% of the full scale. Then, turn the Drive adjusting VRs (R806, R816) and adjust the High-Brightness White Balance.
- Adjust CONTRAST control to minimum and check that the Low-Brightness White Balance is obtained by directly observing the CPT surface, without using a mirror.
- When the Low Brightness White Balance is not obtained, adjust other Low-Brightness White Balance VRs except VR-A and return to item (6). White Balance Color Temperature Setting 7,200K.
- Set White Control (Color Temperature Control) to ON (COOL), and check that Color Temperature is approximately 9,300K.

#### 2-5. Sub-Black Level Adjustment VR(R340) Adjustment Preparation

- Apply heat-run for 10 minutes or more after the power is turned ON.
- Receive Color Bar Signal.
- Set CONTRAST and COLOR Controls to minimum.
- Set the vertical incident illumination on the CPT surface to 20 lux or less.
- Set BRIGHTNESS Control to the center position.
- Set White Control to OFF (STD).

#### Adjustment Procedure

- Turn SUB-BLACK LEVEL adjustment VR (R340) as follows. SUB-BLACK LEVEL adjustment the background of A1,A2,A3 are set to black and A4 is set lighter black.

W	Y	CY	G	MG	R	BL
75%						
A7	A6	A5	A4	A3	A2	A1
B						
D						
Q	I	W100%			BLK	

The background is set to black. Perform the adjustment without observing the boundary parts.

The background is set to lighter black.

- Check by directly observing the CPT surface, without using a mirror.

### 2-6. AGC Adjustment VR(R202)

#### Adjustment Preparation

- After all the adjustments are finished, heat-run 5 minutes or more in signal receiving condition.
- Receive Color Bar Signal or High-VHF Channel (CH10).
- Set CONTRAST to maximum, and BRIGHTNESS to On-Screen Display center.
- Antenna input power: -53dBm \*1 (-53dBm ~ -52dBm)
- Connect DC Voltmeter of internal resistance 1MΩ or more to TPI5.

#### Adjustment Procedure

- Adjust AGC Adjustment VR (R202) until the indication of DC Voltmeter does not change any more at the maximum point. The reading of DC Voltmeter is named V1.
- Adjust AGC Adjustment VR (R202) so that the indication of DC Voltmeter is {V1-(0.5 ± 0.2)}V. Verify that there is no video noise visibly seen.

### 2-7. Channel Selector Operation Check

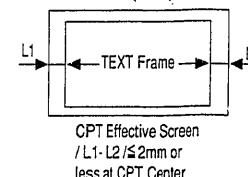

#### 2-7-1. CCD Display Position Adjustment.

##### Adjustment Preparation

- Receive an Encoded Signal of Closed Caption Signal.
- Press and hold down the AVX key and press POWER key of MAIN P.W.B. front keys, turn ON the set.

##### Adjustment Procedure

- When the TEXT from the CAPTION appears On Screen. Adjust the size of TEXT and from area satisfies the following specification by using (◀), (▶) control buttons.

- When the adjustment item(1) is finished, turn OFF the set by the POWER key.

### 2-8. Matching Check With Other Instruments

#### 2-8-1. VIDEO 1 Input Terminal Matching Check

##### Adjustment Preparation

- Input a Video Signal to the VIDEO 1 terminal. The Video Signal Level should be within  $1 \pm 0.2$  Vp-p (75 ohm termination) with 100% White Signal.
- Input an Audio Signal to the AUDIO 1 terminal. The Audio Signal Level should be 400mVrms ± 2mVrms at this time. (Connect VCR or TV TUNER)
- Connect an Audio AMP to the AUDIO OUT terminals. (Or connect VIDEO and AUDIO terminals of a standard monitor.)

##### Adjustment Procedure

- Check that the set receives signal when the AVX1 Mode is selected, by pressing the AVX (FUNCTION) button on the front side of the set.
- When an External Input is performed, the Video and Audio should not be abnormal. The 100% White Signal that RF input receives should be as bright as the Video Signal 1Vp-p (75 ohm termination). As for the sound, when the 100% modulation that RF input receives is 25KHZ, DIV., the Sound Level should be as much as the External Audio Signal (400 Vrms) level.

#### 2-8-2. VIDEO 2 Input Terminal Matching Check.

##### Adjustment Preparation

- Same as 2-8-1.
- Check that the set receives signal at AVX2 Mode.

#### 2-8-3. VIDEO 3 Input Terminal Matching Check

Same as 2-8-2.

#### 2-8-4. S-IN Input terminal Matching check.

##### Adjustment Preparation

- (1) Connect the Video/Chroma Signal to S-IN terminal.
- (2) Connect the Sound Signal to AUDIO 1 input terminals.

##### Adjustment Procedure

- (1) Check that the set receives signal at S-IN Mode.

#### 2-8-5. AUDIO Output Level Check

##### Adjustment Preparation

- (1) Input the same Audio Signal as Item 2-8-1 (2) to AUDIO IN terminal(L). At this time, connect nothing to R terminal.
- (2) Input the same Audio Signal as Item 2-8-1 (2) to AUDIO IN terminal (R). At this time, connect nothing to L terminal.
- (3) Check that the Normal Sound is output from both sides of the speakers when signal in item (1) is input.
- (4) Check that the Normal Sound is output from only the right ((R) speaker when signal in item (2) is input.

##### Adjustment Procedure

- (1) Check that the Audio Output of AUDIO AMP connected to AUDIO Hi-Fi OUT terminals or monitor changes according to the "VOLUME" of the set.
- (2) Confirm that the Output Level of item(1) should be 1Vrms (2.8 Vpp)±20%. (Above level is equivalent to maximum VOLUME,100% Modulated Signal Input.)

#### 2-9. Safety Check

##### 2-9-1. Polarity Check

There should be electricity between AC Power Cord and Chassis Earth.

#### 2-10. MTS Operation Check

##### 2-10-1. STEREO/SAP Broadcast Receiving Check

##### Adjustment Preparation

- (1) Set the set so that a MTS Broadcast (STEREO/SAP) can be received..
- (2) Set MTS Mode to STEREO or SAP Mode.  
**Note:** To select between "STEREO/SAP", display sound setting of MTS Mode and select SOUND MENU.
- (3) Set BALANCE to the center.

##### Adjustment Procedure

- (1) When one of the MTS Broadcast Stereo or SAP is received, check that "ST" or "SA" is displayed on the screen.

STEREO	11
or SAP	ST or SA

##### (2) STEREO Broadcast Receiving Check

- (I) Select MTS Mode and press ENTER button to display "STEREO" on the screen.
- (II) When only Lch signal is received, Lch sound comes out from the left speaker.
- (III) When only Rch signal is received, Rch sound comes out from the right speaker.
- (IV) When Monaural Signal is received, Monaural Sound comes out from both of the right and left speakers.

- (3) SAP Broadcast Receiving Check
- (I) Select MTS Mode and press ENTER button to display "SAP" on the screen.
  - (II) SAP signal comes out from both of the right and left speakers.
  - (III) When no SAP signal, the sound on "MAIN" side comes out.

##### 2-10-2. MTS Mode Check

##### Adjustment Preparation

- (1) Set the set so that a MTS Broadcast (STEREO/SAP) can be received.

#### 2-8-6. S-IN Input terminal Matching check.

##### Adjustment Procedure

- (1) When "MTS MODE" Mode is set to "MONO" side, check that STEREO and MONO indication lamps which have been ON are turned OFF and that Monaural Sound comes out from the right and left speakers.
- (2) When "MTS MODE" Mode is set to "STEREO" side, check that STEREO and MONO indication lamps which have been OFF are turned ON and that STEREO and SAP sound can be received.

#### 2-10-3. STEREO Separation Check

##### Adjustment Preparation

- (1) Set the set so that a MTS Broadcast (STEREO/SAP) can be received.
- (2) Make Surround "OFF".
- (3) Set MTS MODE to "STEREO".
- (4) Connect AUDIO OUT terminals L and R to an Oscilloscope.

##### Adjustment Procedure

- (1) When STEREO L only signal (or R only signal) is received, check that the Output Level Ratio of L CH and R CH is 15 dB or more. (Example)

CH	Output Level
L	1.2 Vpp
R	0.21 Vpp or less

When L only is received (100% modulation)

#### 2-11. Setting For Delivery

Setting is possible by Remo-Con jig.

#### SPECIFICATION BY MODELS

NAME	SPECIFICATIONS BY MODELS	
	P in P	No P in P

#### 2-12. Magnetic Field Correction Circuit Operation Check.

##### (357X10B/CZ41 Only)

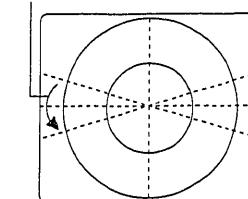

##### Adjustment Preparation

- (1) Receive Circle Pattern Signal.
- (2) Set "Weak/Strong SW" to "Strong".
- (3) Set "Direction SW" to "N".
- (4) Check that the raster rotates to counterclockwise when "Direction SW" set from "N" to "S".
- (5) Set "Weak/Strong SW" set to "Weak".
- (6) Set "Direction SW" to "N".
- (7) Check that the raster rotates to counterclockwise when "Direction SW" set from "N" to "S".
- (Check the rotation angle is less than "Strong" position.
- (8) Set "Weak/Strong SW" to "Strong" and "Direction SW" to "EW".

## TROUBLESHOOTING

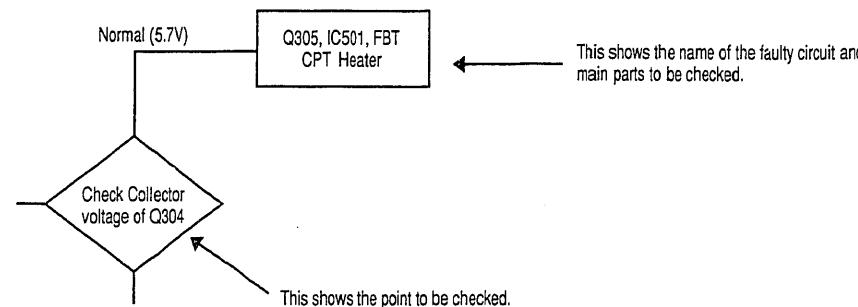

### PRODUCT SAFETY NOTE

The shaded and  $\Delta$  marked components have special characteristics important to safety. Read carefully the Product Safety Notice of each service manual. Don't degrade the safety of the receiver through improper servicing when replacing any of this components.

#### HOW TO USE THE FLOW CHART

- (1) The flow chart shows the following:

This shows the name of the faulty circuit and main parts to be checked.  
This shows the point to be checked.

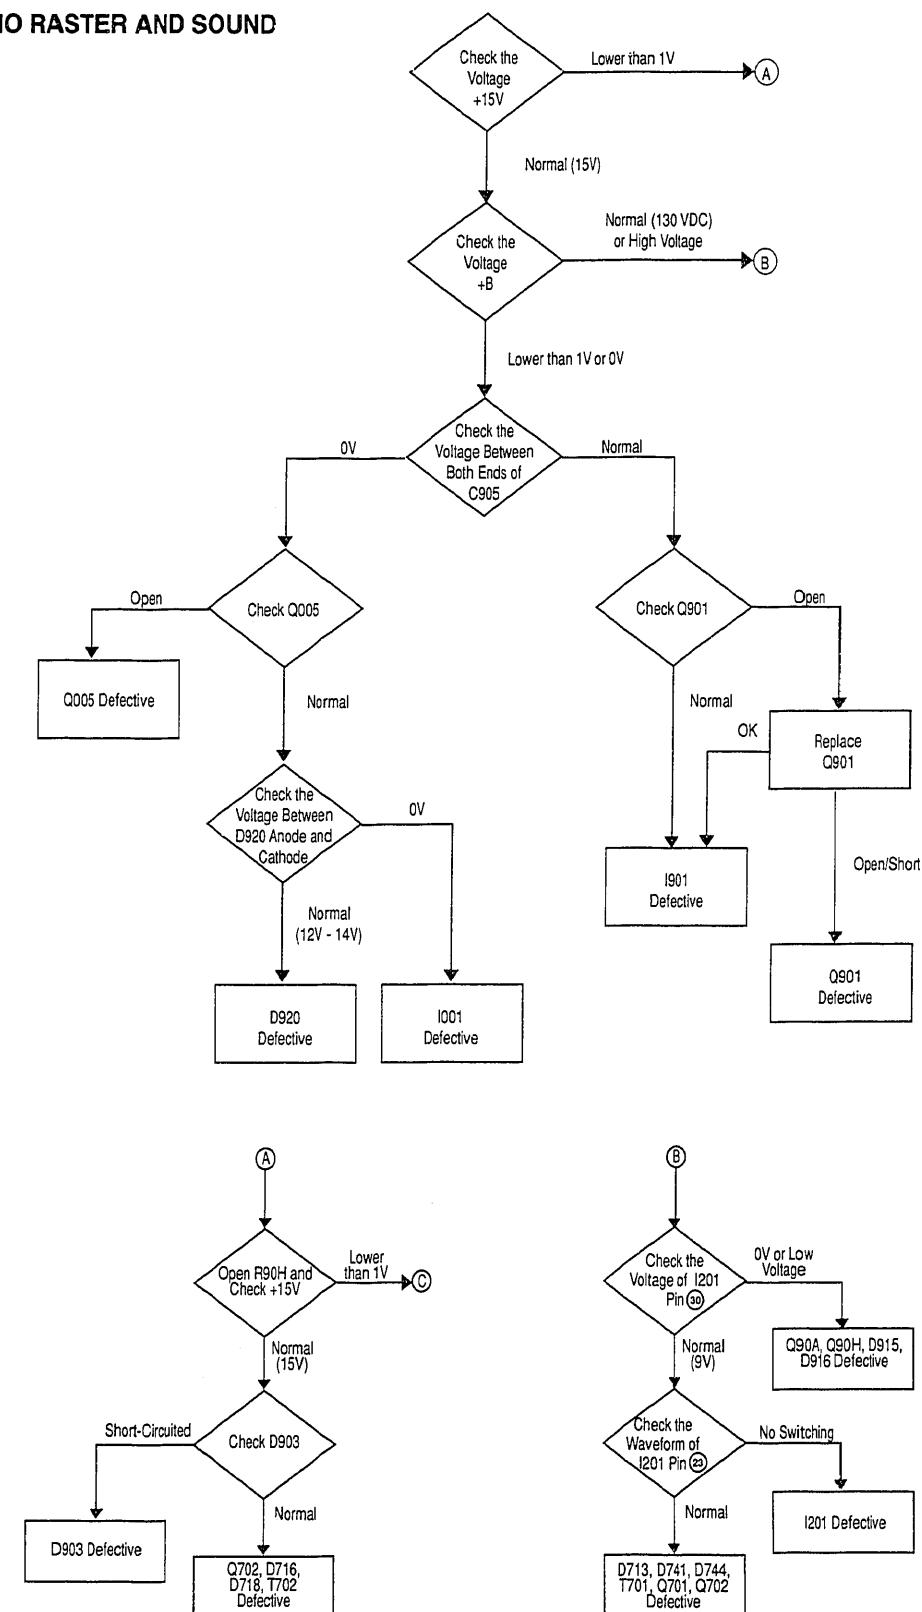

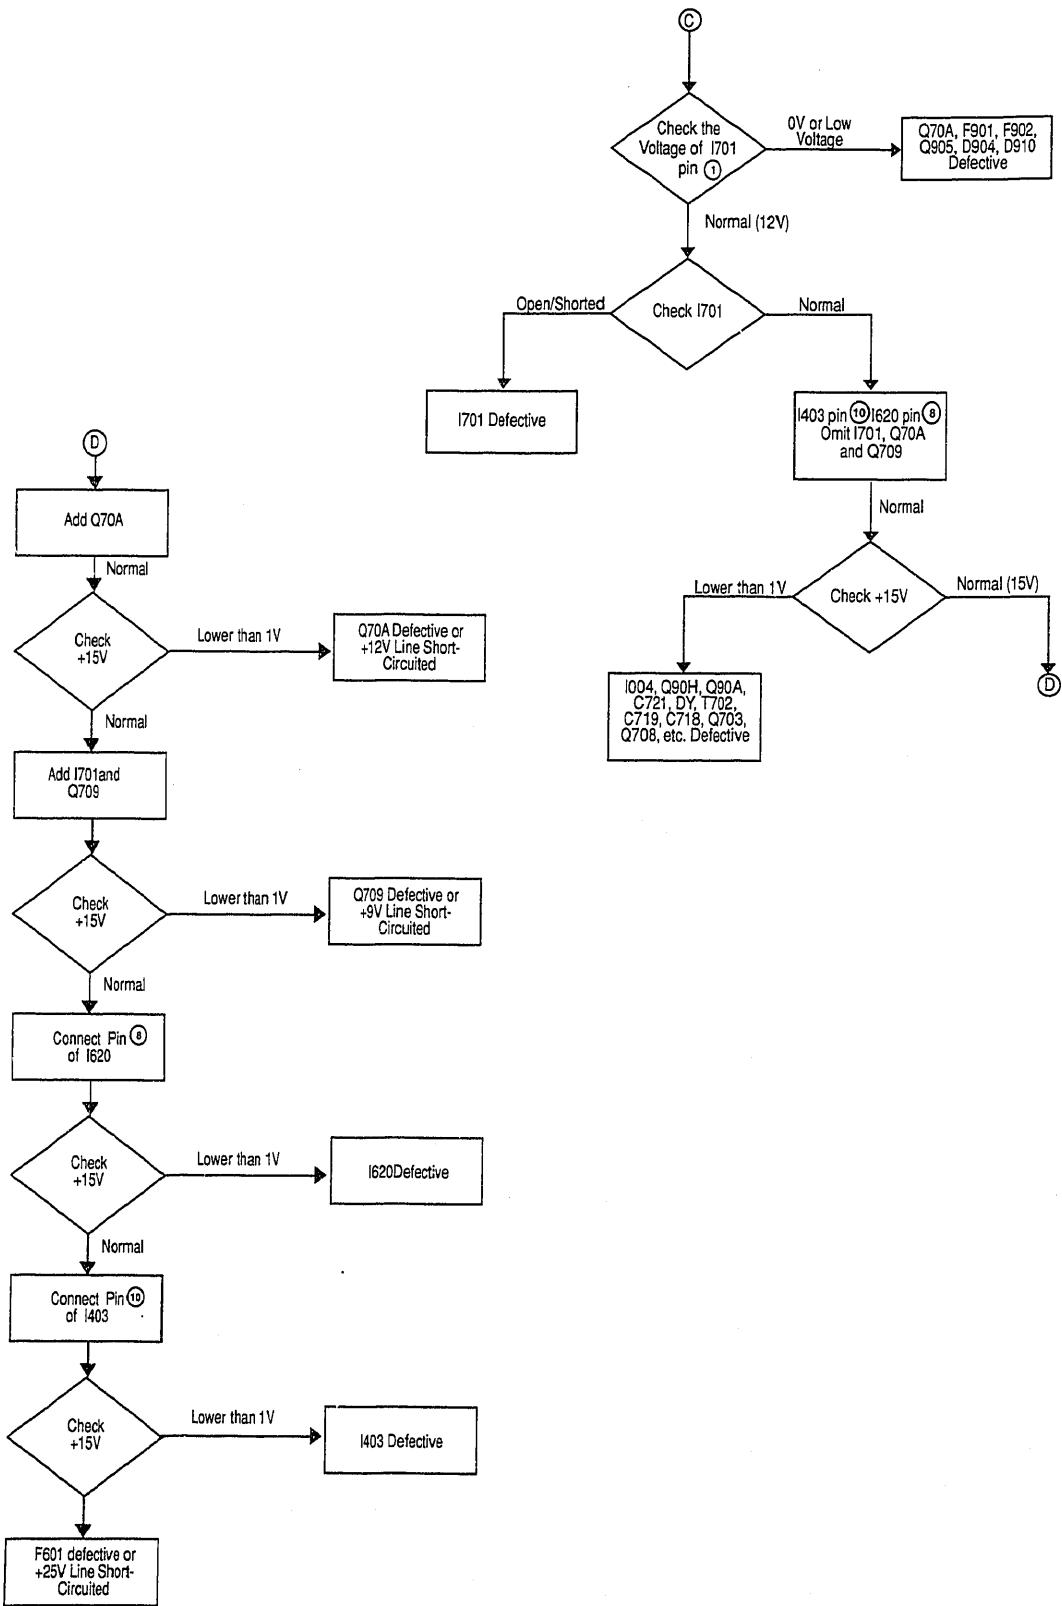

- (2) The voltage shown in the chart may differ to some extent depending on the condition of the set and tester.

#### PRECAUTION ON MAKING MEASUREMENTS AND ON HANDLING

1. When any parts become abnormally hot or there is a smell of burning, cut OFF the power immediately.
2. Do not make shorts between circuits or across terminals except for those specified.
3. When applying a signal for checking purposes, make connection in the alternate current system for any not specified.
4. When measuring the voltages of ICs and TRs, be careful to see that the lead bar of the tester does not touch any other terminal.
5. Measure the voltage correctly.
6. Measure the resistance over a small range.
7. Be sure to switch OFF the power when replacing parts.
8. Do not apply a soldering iron for a long time when replacing parts. (Use a solder-wick.)
9. Use an isolation transformer when troubleshooting.

### 1. NO RASTER AND SOUND

## REPLACEMENT PARTS LIST

**PRODUCT SAFETY NOTE:** Components marked with a  $\Delta$  have special characteristics important to safety. Before replacing any of these components, read carefully, the PRODUCT SAFETY NOTICE of this Service Manual. Don't degrade the safety of the receiver through improper servicing.

# CIRCUIT SCHEMATIC DIAGRAM OF 35TX10B/CZ41

PRODUCT SAFETY NOTE: Components marked with a and shaded have special characteristics important to safety. Before replacing any of these components, read carefully the PRODUCT SAFETY NOTICE of this Service Manual. Don't degrade the safety of the receiver through improper servicing.
