## INSTRUCTIONS

### SPECIFICATIONS

**AUDIO AMPLIFIER SECTION**

Maximum Power Output: (Front) 22 watts per channel  
(Rear) 22 watts per channel  
Continuous Power Output (RMS): (Front) 8 watts per channel into 4  $\Omega$ , 40 to 20,000 Hz at no more than 0.8% total harmonic distortion. (Rear) 8 watts per channel into 4  $\Omega$ , 40 to 20,000 Hz at no more than 0.8% total harmonic distortion.

Load Impedance: 4  $\Omega$  (4 - 8  $\Omega$  Allowable)

Tone Control Range

Bass:  $\pm 10$  dB at 100 Hz  
Treble:  $\pm 10$  dB at 10 kHz

Frequency Response: 40 - 20,000 Hz

Signal-to-Noise Ratio: 60 dB

**RADIO SECTION**

Frequency Range

FM: 87.5 - 107.9 MHz  
AM: 530 - 1,710 kHz

**(FM Tuner)**

Usable Sensitivity: 15.3 dBf (1.6  $\mu$ V/75  $\Omega$ )  
50 dB Quieting Sensitivity: 18.8 dBf (2.4  $\mu$ V/75  $\Omega$ )  
Alternate Channel Selectivity (400 kHz): 65 dB  
Frequency Response: 40 - 15,000 Hz  
Stereo Separation: 35 dB  
Capture Ratio: 2.0 dB  
(AM Tuner)  
Sensitivity: 20  $\mu$ V  
Selectivity: 35 dB

**CASSETTE DECK SECTION**

Wow & Flutter: 0.15 % (WRMS)  
Fast Wind Time: 190 sec. (C-60)  
Frequency Response:  
50 - 14,000 Hz ( $\pm 3$  dB)  
Signal-to-Noise Ratio: 52 dB  
Stereo Separation: 40 dB

**GENERAL**

Power Requirement:

Operating Voltage: DC 14.4 V (11 V - 16 V Allowable)

Grounding System: Negative Ground  
Dimensions (W x H x D)

Chassis: 178 x 50 x 134 mm  
(7-1/16" x 2" x 5-5/16")

Nosepiece: 105 x 42 x 35 mm  
(4-3/16" x 1-11/16" x 1-7/16")

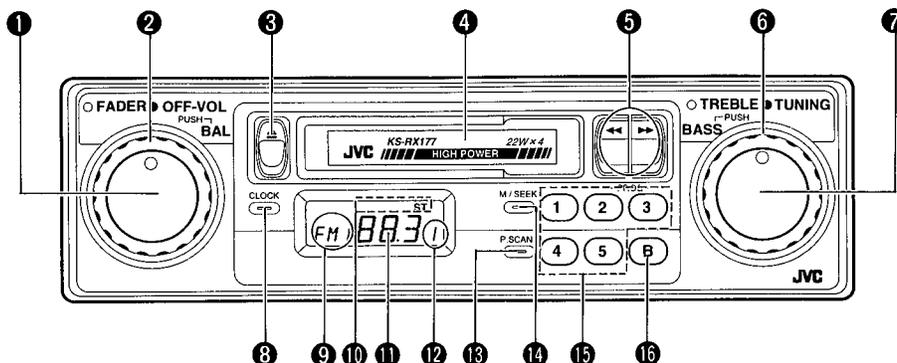

Control Shaft Pitch: 148 mm (5-7/8")  
Gross Weight: 1.5 kg (3.4 lbs)

*Design and specifications subject to change without notice.*

If a kit is necessary for your car, consult your telephone directory for the nearest car audio speciality shop.

Thank you for purchasing a JVC product. Please read all instructions carefully before operation, to ensure your complete understanding and to obtain a longer service life from the unit.

### LOCATION OF CONTROLS

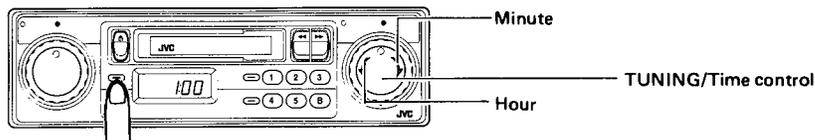

- ① Power on-OFF/volume (VOL)/Push balance (PUSH BAL) control
- ② FADER control
- ③ Eject (▲) button
- ④ Cassette loading slot
- ⑤ Program (PROG)/◀▶ buttons
- ⑥ TREBLE/PUSH BASS control
- ⑦ TUNING/Time control
- ⑧ CLOCK button
- ⑨ Band indicator (FM1-FM2-FM3-AM)
- ⑩ Indicators  
SEEK  
ST (FM Stereo)  
◀▶ (Tape direction)
- ⑪ Radio frequency/Time display
- ⑫ Preset station indicator
- ⑬ Preset scan (P. SCAN) button
- ⑭ Manual (M)/SEEK button
- ⑮ Preset station buttons
- ⑯ Band (B) button

### CLOCK ADJUSTMENT

When listening to a tape, the display will show the time. When listening to the radio, each time the CLOCK button is pressed the time and frequency can be selected. When the radio is operated in the time mode, the display will switch to frequency, then, after a short time, will return to the time mode. To cancel the time mode, press the CLOCK button again.

● **How to adjust the clock**

When the display is in the clock mode, while keeping the CLOCK button pressed, turn the Tuning control counterclockwise to adjust the "hours" and turn the Tuning control clockwise to adjust the "minutes".

### TAPE OPERATION

Operate in the order shown.

<p>① ● OFF - VOL</p> <p>Switch on.</p>	<p>②</p> <p>Insert cassette.</p>	<p>③ PROG</p> <p>Select program.</p>	<p>④ VOL PUSH BAL</p> <p>Adjust.</p>
<p>⑤ ○ TREBLE PUSH BASS</p> <p>Adjust.</p>	<p>⑥ ○ FADER</p> <p>Adjust.</p>		

### AUTOMATIC LOUDNESS CONTROL

At low volumes, the human ear is less sensitive to high and low frequencies. This unit incorporates a circuit so that the low-volume sound at high and low frequencies is automatically boosted to output well-balanced sound.

### HOW TO FAST-WIND TAPES

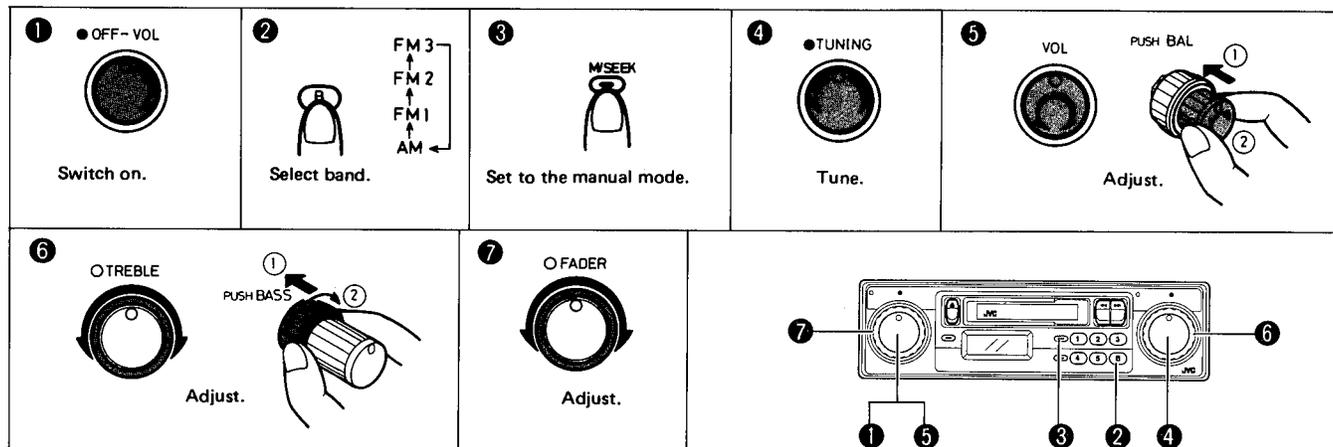

To fast-wind tapes, press either the ◀◀ or ▶▶ button. The tape will be wound in the direction of the arrows (◀◀ or ▶▶). To restart playback, lightly press the ◀◀ or ▶▶ button.

### AUTO-REVERSE MECHANISM

When the tape reaches its end, this mechanism automatically switches over to play back the other side. To listen to the other side of the tape during playback, press the PROG(◀◀/▶▶) buttons. The change in direction can be checked in the Tape Direction indicator.

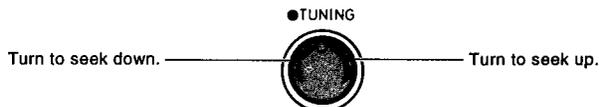

## RADIO OPERATION

Operate in the order shown.

### MANUAL TUNING

Set to the manual mode using the M/SEEK button. When SEEK is not shown in the display, the unit is in the manual mode. The Tuning control will not lock in place; it automatically returns to its center position when released. Keep the control in position for more than 0.5 second to change frequencies rapidly. You can step through the frequency in 200 kHz units for FM and 10 kHz units for AM.

### SEEK TUNING

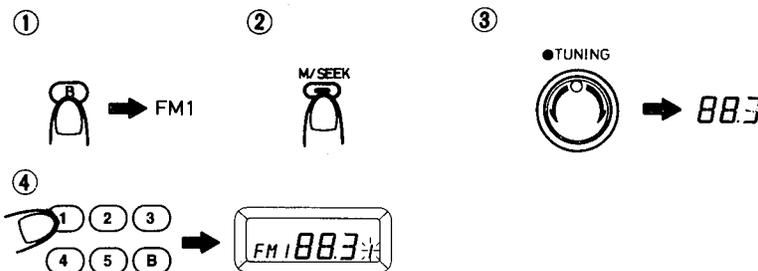

Set to the seek mode using the M/SEEK button; the SEEK indicator will light. Then, by turning the Tuning control the unit tunes to the adjacent station with a higher or lower frequency.

### MANUAL STATION PRESET

You can preset up to 5 stations in each band (FM1, FM2, FM3 and AM) as follows:

- Example (when presetting Preset Station button "1" to FM station at 88.3 MHz)

- 1 Select the FM1 band using the B button.
  - 2 Set to the manual mode.
  - 3 Tune to the desired station.
  - 4 Press Preset Station button "1" for more than 2 sec. (When "1" blinks in the Preset Station display, the station is preset.)
- Repeat the above procedure for each of the other four stations using a different Preset Station button each time.
  - Follow the above procedure for the other bands (FM2, FM3 and AM).

#### Notes:

- The preset station is erased when a station is newly preset because the new station is stored in the memory.
- The preset station is erased when the power supply to the memory circuit is interrupted during battery replacement, etc. When this occurs, preset the station again.

### PRESET SCAN BUTTON TUNING

This makes it possible to automatically scan preset FM and AM stations.

- ① Press the P.SCAN button.
- ② Scanning is performed in the order of preset stations in each frequency band (FM1, FM2, FM3 and AM). Each preset station is heard for approx. 5 seconds.
- ③ When the required station is heard and its frequency is flashing, press the P.SCAN button again.

### IMPORTANT INFORMATION

1. This unit is designed to operate with 12 volts DC, NEGATIVE ground electrical systems only.
2. Replace the fuse with one of the specified RATING. If the fuse blows frequently, consult your JVC car audio dealer.
3. Do not touch the highly-polished head with any metallic or magnetic tools.
4. If noise is a problem...  
This unit incorporates a noise filter in the power circuit. However, with some vehicles, clicking or other unwanted noise may occur. If this happens, connect the unit's rear ground terminal to the car's chassis using shorter and thicker cords, such as copper braiding or gauge wire. If noise still persists, consult your JVC car audio dealer.
5. Never play dirty or dusty tapes since they will greatly degrade the sound and performance of your unit. Always keep your tapes clean.

#### Antenna noise

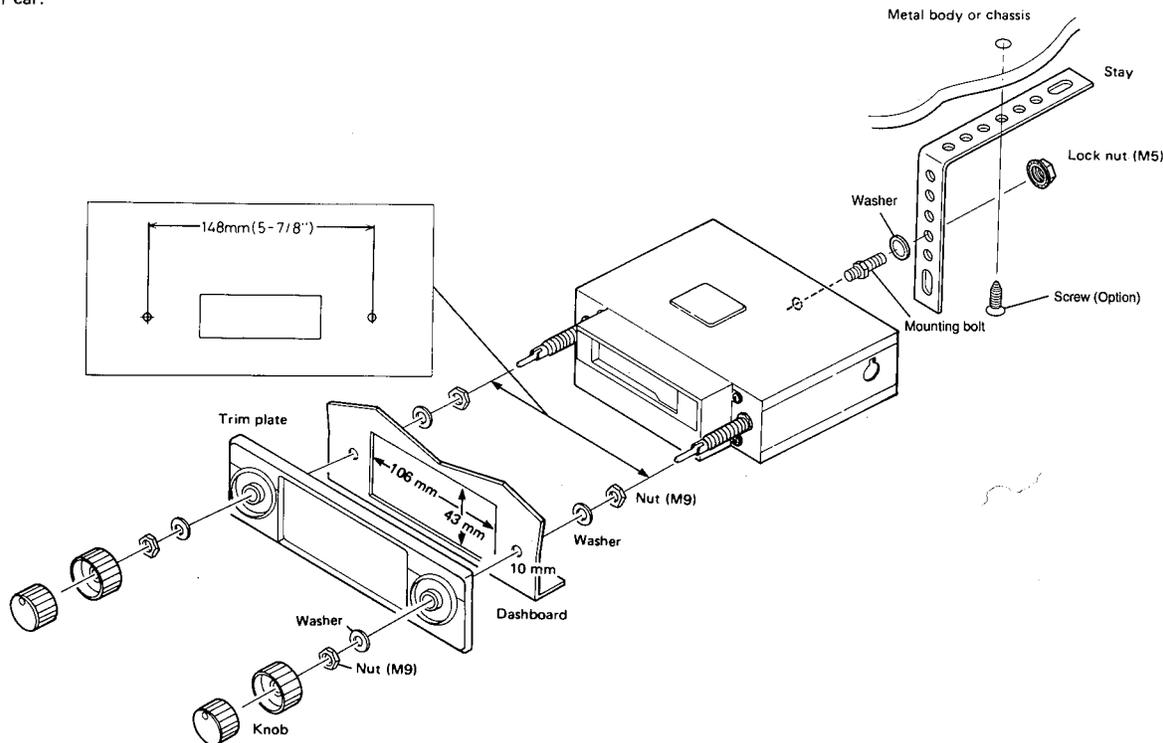

If you can hear static noise when listening to both AM and FM, check for loose antenna connections.

### INSTALLATION (IN-DASH MOUNTING)

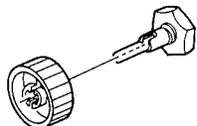

- The following illustration shows a typical installation. However, you should make adjustments corresponding to your specific car. If you have any questions or require information regarding installation kits, consult your JVC car audio dealer or a company supplying kits.

#### Note:

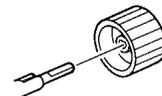

In some cases, it may be necessary to adjust the opening in the trim plate and/or dashboard, etc. to fit your car.

#### • Knob attachment

• Align both of the slots

• Align the flat parts

• Make sure to assemble as shown, or the knobs will not fit.

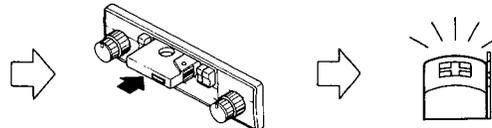

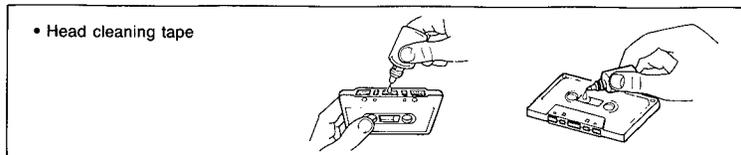

## MAINTENANCE

### • Cleaning The Head

Heads are important as they pick up sound. When they become dirty, the following symptoms become noticeable:

- The sound quality is reduced.
- The sound level is decreased.
- The sound can be heard intermittently. (Sound drop occurs.)

These are NOT malfunctions. However, before these symptoms appear, clean the heads after every 10 hours of use using a wet-type head cleaning tape, available from an audio store. For more details, refer to the Instructions of the Head Cleaning Tape.

## TAPE CARE HINTS

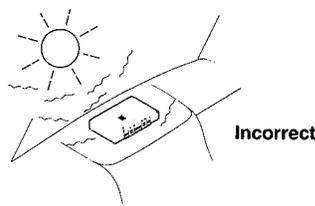

It is very important to keep your tapes clean. Always return them to their storage boxes after playback.

Never store tapes in direct sunlight, high humidity or extremely hot temperatures.

Never play dirty, dusty tapes or the tapes with peeling labels — they can damage the unit.

Slack tape in a cassette can cause trouble by becoming entangled with the mechanism.

- Always remove cassettes from the loading slot when not listening to them, as the tape may become slack.

## ELECTRICAL CONNECTIONS

To prevent short circuits, we recommend that you disconnect the battery's negative terminal and make all electrical connections before installing the unit. If you are not sure how to install this unit correctly, have it installed by a qualified technician.

### Note:

This unit is designed for a 12-volt DC negative ground. If your vehicle does not have this system, a voltage inverter is required, which can be purchased at JVC car audio dealers.

- Maximum input of the speakers should be more than 22 watts at the rear and 22 watts at the front, with an impedance of 4 to 8 ohms.

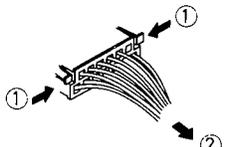

### CAUTIONS:

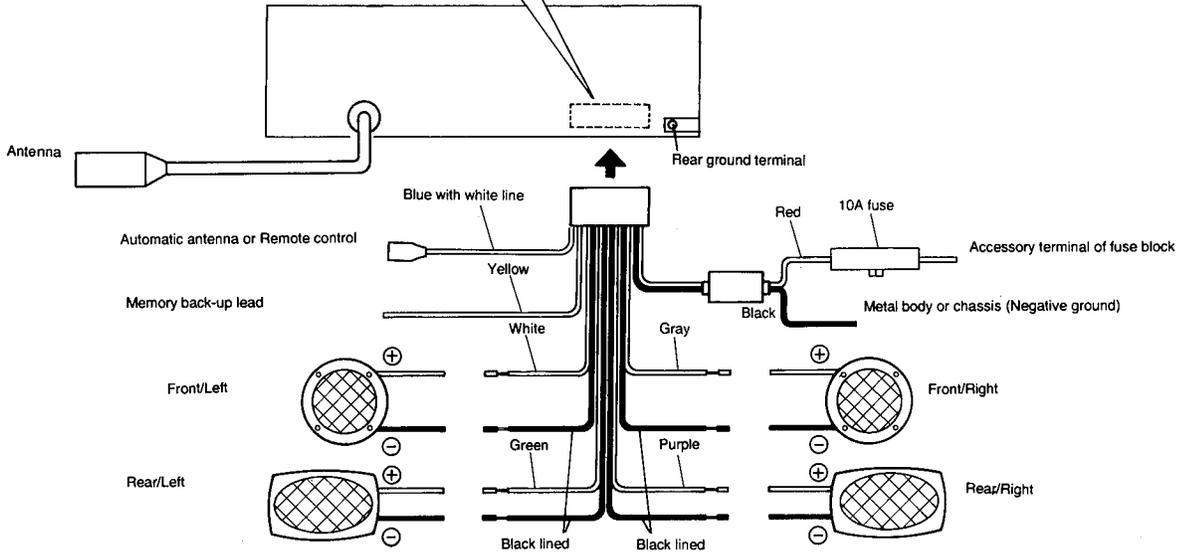

As this unit uses BTL (Balanced Transformerless) amplifier circuitry (floating ground system), please comply with the following:

1. Do NOT connect the black-lined speaker leads to a common point.
  2. Do NOT connect the speaker leads to the metal body or chassis.
  3. When NOT using the automatic antenna, cover the terminal with insulating tape to prevent the remote lead from shorting.
- Be sure to ground this unit to the car's chassis.

**A. 4-Speaker Connections**

- When connecting connectors, insert firmly till a click sound is heard.
- When disconnecting connectors, disengage the lock and pull out the connector.

**B. 2-Speaker Connections**

Two speakers can be connected to either the front or rear pair of speaker output terminals. Cover the unused terminals with insulating tape to prevent short-circuits.

**C. Automatic Antenna Connections**

To use the automatic antenna, connect its remote lead (blue with white line) terminal. For details of installation, see the automatic antenna's Instruction Manual.

**D. Memory Back-Up Lead**

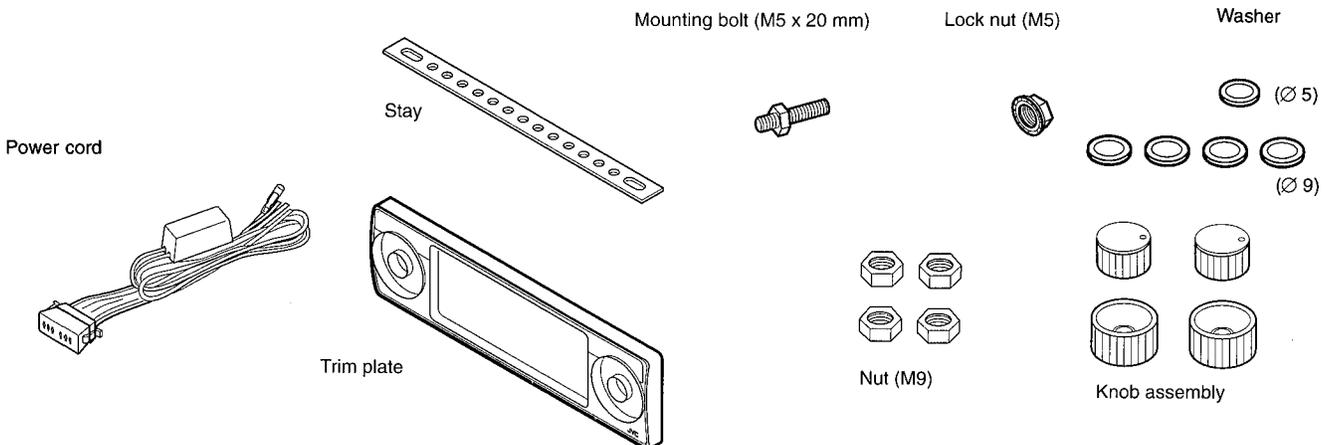

Connect this lead (yellow) to a LIVE power source (supplied even when vehicle ignition is OFF).

**E. Fader Control**

- When used in a 4-speaker system  
When the FADER control is turned counterclockwise, the sound will be heard from the front speakers, and when turned clockwise, from the rear speakers.
- When used in a 2-speaker system  
Set this control to the center position.

**Parts list for installation and connection**

The following parts are provided with this unit. After checking them, please set them correctly.

# 1 Location of Main Parts

## Amplifier section

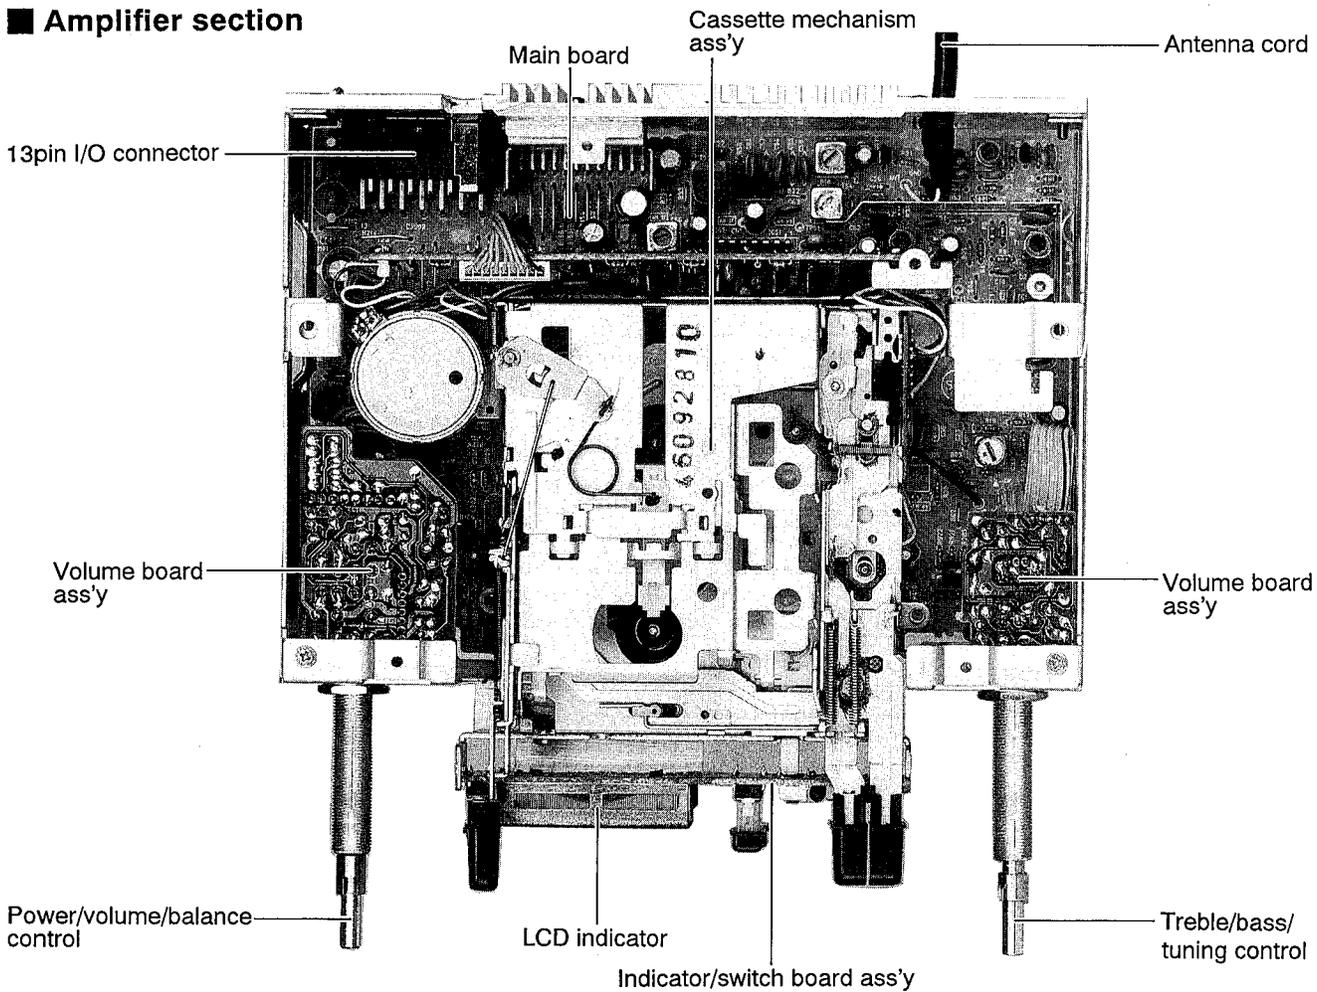

Fig. 1-1

## Mechanism section

### Top view

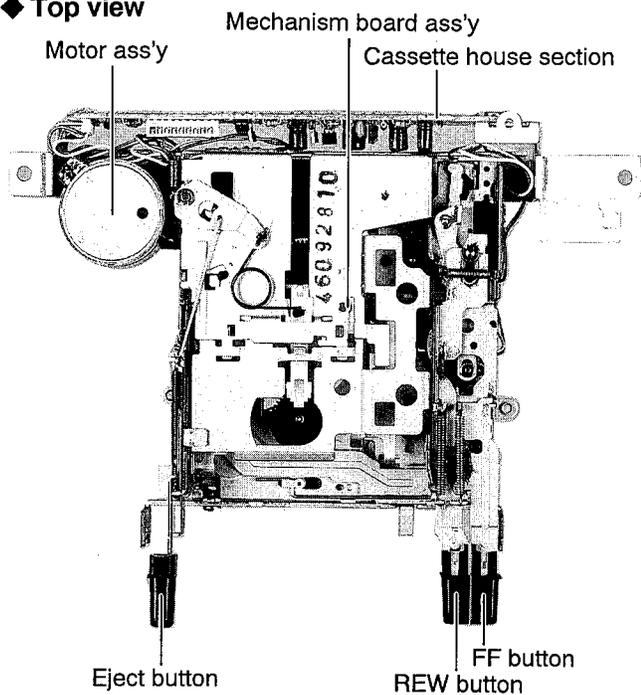

Fig. 1-2

### Bottom view

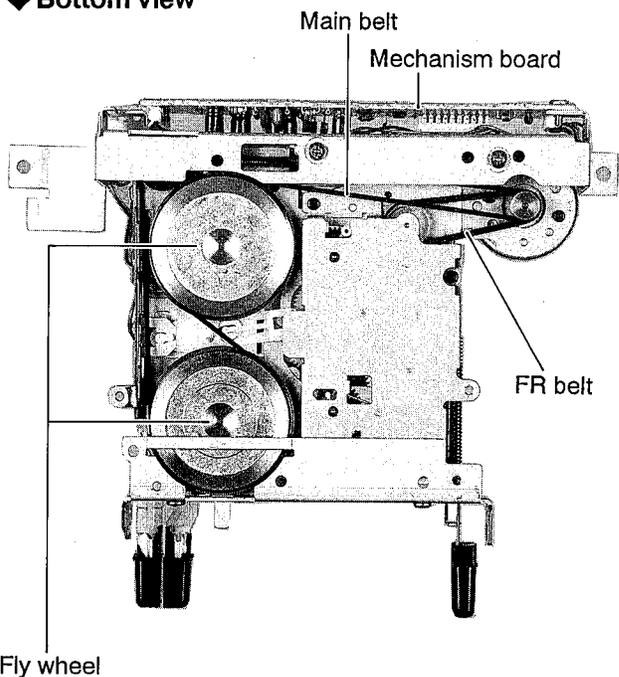

Fig. 1-3

## 2 Removal of Main Parts

### ■ Top cover (Figs. 2-1, 2-2, 2-3)

1. Remove three screws ([1] × 2, [2] × 1) retaining the top cover from the right top.
2. Remove two screws (3) retaining the top cover from the rear of the set.
3. Insert an ordinary screwdriver into a gap between the main body and the top cover while lifting the top cover upward to remove it.

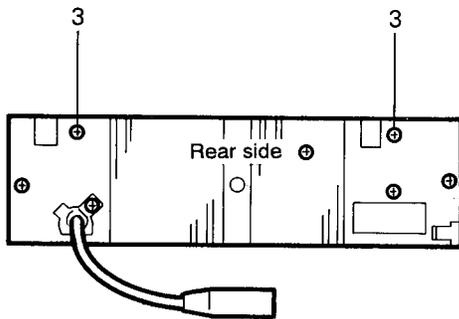

Fig. 2-2

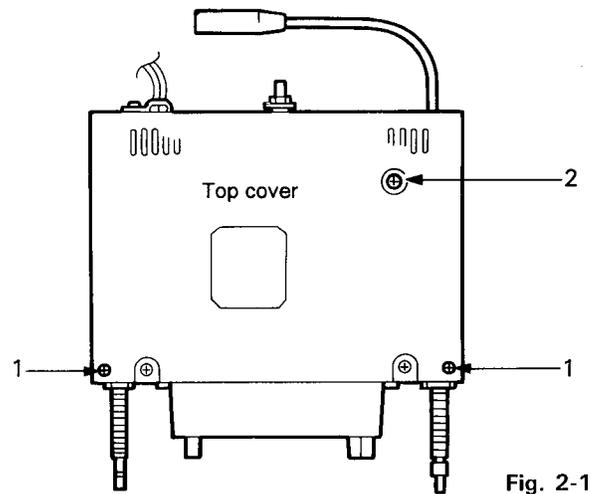

Fig. 2-1

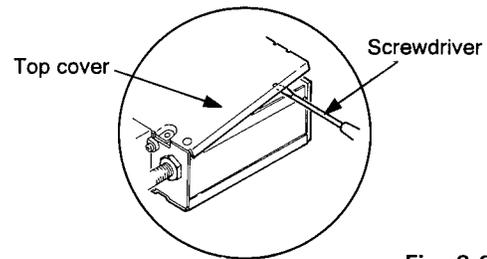

Fig. 2-3

### ■ Nosepiece assembly (Figs. 2-4)

- Remove four screws (4) retaining the nosepiece assembly from the front of the set.

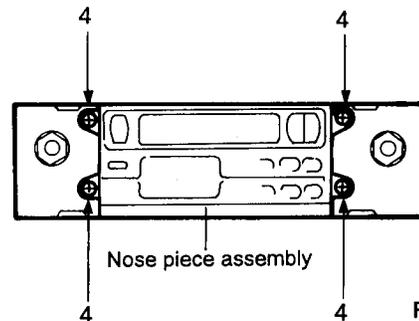

Fig. 2-4

### ■ Cassette mechanism assembly (Figs. 2-5, 2-6, 2-7)

1. Remove the top cover and nosepiece assembly. (Refer to the removal procedure of "Top cover" mentioned above.)
2. Remove two flat head screws (5) retaining the cassette mechanism assembly from the chassis.
3. Before disassembling the mechanism assembly into a single mechanism unit, remove the switch/display board. (Fig. 2-5)
4. Disconnect a 9-pin connector cable that is connected to the connector CP851 on the main board from the connector on the mechanism board.
5. Place the set upside down, and remove two flat head screws (6) retaining the cassette mechanism assembly.
6. Raise the mechanism board from its back side.

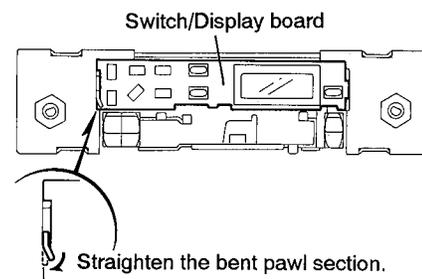

Fig. 2-5

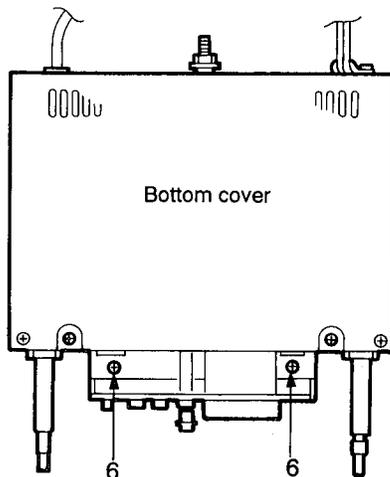

Fig. 2-7

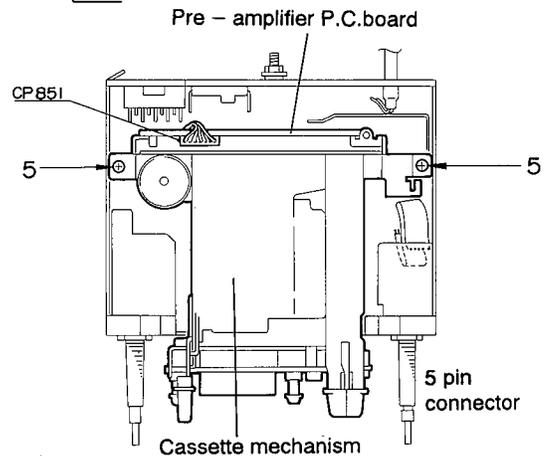

Fig. 2-6

■ **Bottom cover** (Figs. 2-8, 2-9, 2-10)

1. Place the set upside down, and remove two screws (7) retaining the bottom cover.
2. Place the set on its front side and remove two screws (8) retaining the bottom cover.
3. Remove the bottom cover in the same manner as for the top cover.

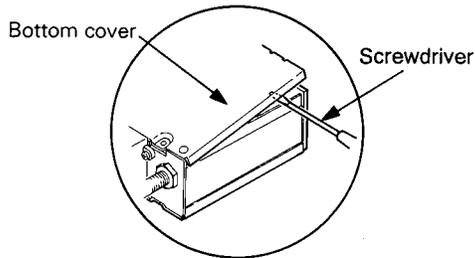

Fig. 2-10

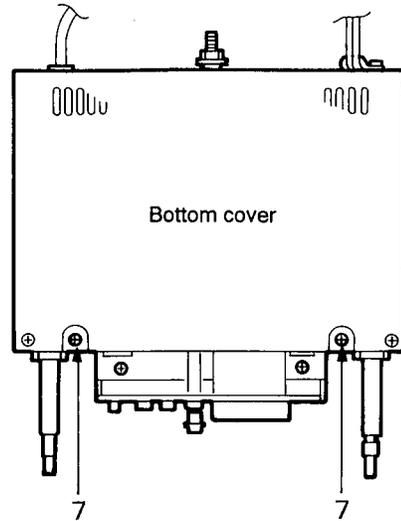

Fig. 2-8

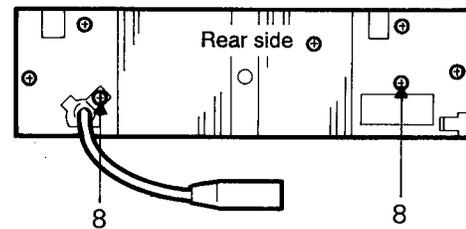

Fig. 2-9

■ **Volume boards in both sides** (Fig. 2-11)

1. Remove the top cover. (Refer to the removal procedure of "Top cover" mentioned above.)
2. Facing the front of the set, remove the nut with washer retaining the volume/balance board.
3. Remove the volume shaft through the hole in the front frame.
4. Remove the nut with washer retaining the treble/bass board.
5. Remove the volume shaft through the hole in the front frame.

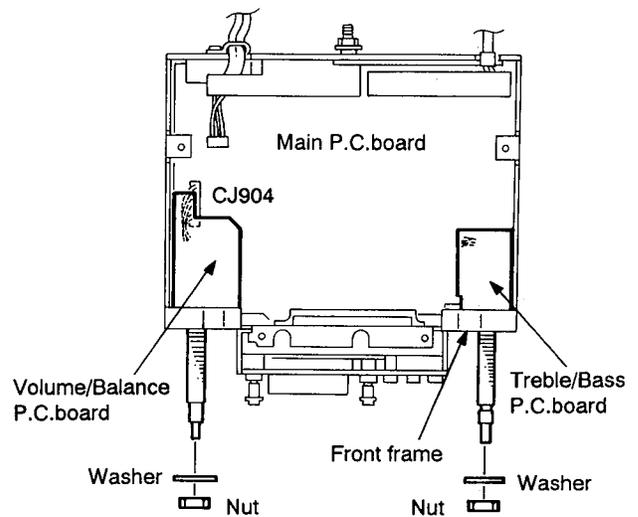

Fig. 2-11

## ■ Cassette mechanism disassembling method

- ☆ Remove the cassette housing unit and button lever unit when you need to replace or adjust heads.
- ☆ The capstan belt (main belt) can be replaced directly.
- ☆ To change the sub-belt, remove the three screws and loosen one screw. Then raise the belt side of the reelbase assembly slightly.

### ◆ Cassette housing unit (See Fig. 2-12~2-14)

1. From the rear of the unit, bend the cassette hanger and chassis claws **a** outwards.
2. While pressing the eject lever, remove the cassette housing unit.
3. Remove the turn link rod from the center plate of the cassette hanger.

※ The reel disk and capstan can now be replaced.

- Remove the C washer at the top of the reel disk to remove the disk. (Replace with a new C washer after repairing.)
- To replace the flywheel capstan, remove the E washer in the pinch roller section. Remove the main belt of the flywheel beforehand.

### ★ Cassette housing assembling method

1. Set the turn rod.
2. Install the cassette housing unit on the chassis.
- While pressing the lever, assemble in the order shown below.

### ◆ Button lever assembling (See Fig. 2-15)

1. From the rear of the unit, remove the button lever mounting screw **1**.
2. From the upper part of the button lever, remove the mounting screw **2**. The screw cannot be taken out.
3. From the front, move the button lever upwards and pull it slightly to the front.

### ★ Assembling

1. Assemble the button lever and the rear section **c**.
2. Assemble the pinch roller shaft **d**, stud **e** and rod **f**.

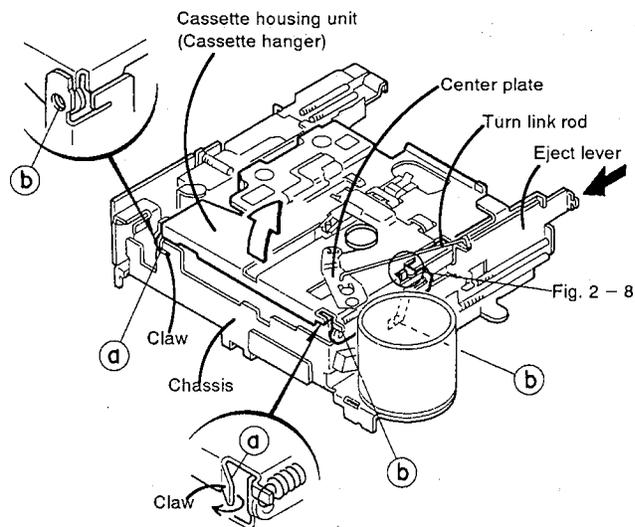

Fig. 2-12

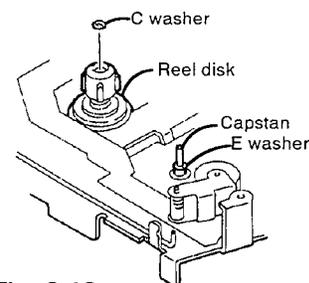

Fig. 2-13

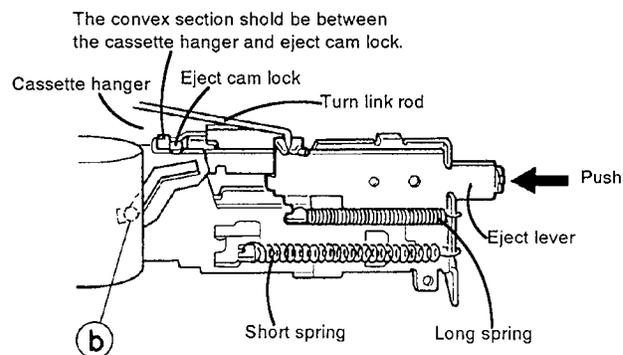

Fig. 2-14

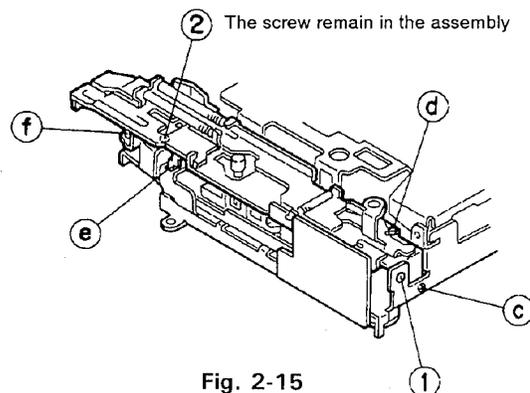

Fig. 2-15

◆ Replacing the head/pinch roller assembly.

○ Pinch roller. (See Fig. 2-16)

1. Remove the E washer ③ on the pinch roller shaft.
2. Remove the pinch roller spring from the chassis and pull out the pinch roller assembly.

○ Head assembly. (See Fig. 2-16)

1. Remove the head mounting screw ④.
2. Remove the C washer ⑤ to pull out the collar.
3. Remove the plate to remove the springs and head.  
(The left and right springs are different.)

◆ Motor (See Fig. 2-17)

1. Remove the main belt (capstan belt)/sub-belt.
2. Remove the two motor mounting screws ⑥.

★ Sub-belt changing method.

1. Remove the main belt.
2. Remove the sub-belt from the motor pulley.
3. Remove the three reel base unit mounting screws ⑦ and loosen one ⑧.
4. Lift up the reel base slightly to change the belt.

◆ Reel base unit (See Fig. 2-17~2-19)

1. Remove select link B rod at the top front by turning the rod near the pinch roller as shown in the figure.
2. Remove the four reel base unit mounting screws ⑦ and ⑧.
3. Remove the reel base unit carefully. (Note: service for the reel base unit is not available.)

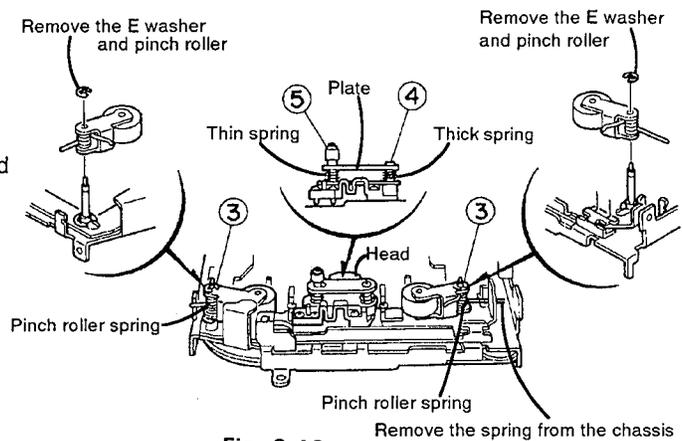

Fig. 2-16

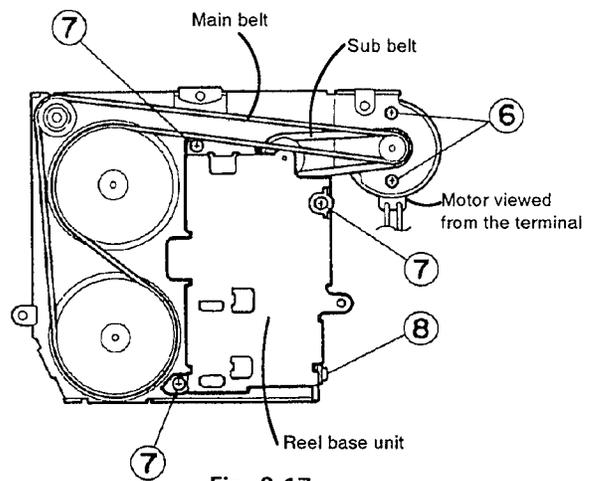

Fig. 2-17

Inside view of the reel base unit

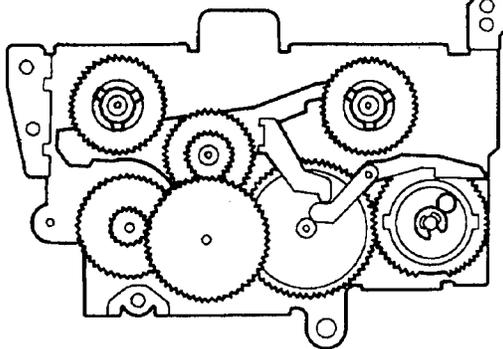

Fig. 2-19

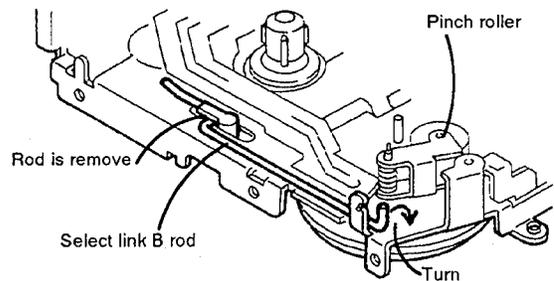

Fig. 2-18

# 3 Main Adjustment

## Equipment and measuring instruments used for adjustment

- Electronic voltmeter
- Audio frequency oscillator  
(range:50~20kHz and output 0 dB with impedance of 600 Ω )
- Attenuator(impedance;600 Ω )
- Frequency counter
- AM Standard signal generator
- FM Standard signal generator
- Wow flutter mater
- Torqu testing cassette gauge  
CTG – N (mechanical adjusting)  
TW – 2111A (FWD play)  
TW – 2121A (REV play)
- Standard tape  
VTT712(tape speed,wow&flutter adj.)  
VTT724(reference level )  
VTT736(playback frequency response )  
VTT721(output level)  
SCC – 1659 (mirrer tape)  
MTT – 942SP (azimuth)

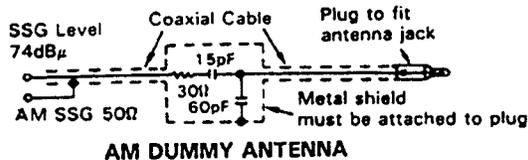

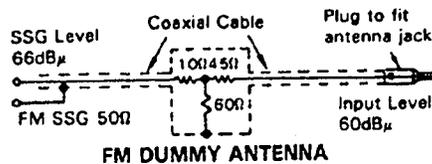

## Condition for measurement

- Power Supply ..... DC14.4V  
(Reduced Voltage:10.5V)
- Load ..... 4 Ω  
(4-speaker connection)
- BASS/TRE, FADER ..... Center
- Main volume ..... Position with an output level of 1.4V during VTT724 playback

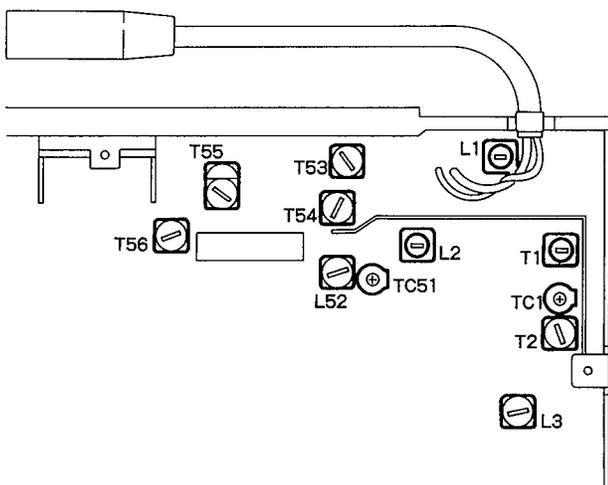

## Tuner section

- **[FM]**;400Hz, 22.5kHz deviation(MONO)
- **[FM]**STEREO ;1kHz, 67.5kHz deviation, pilotsignal 7.5kHz
- **[AM]**;400Hz, 30% modulation ,74dB μ V
- Output impedance ;50 Ω

## Dummy antenna

## Location of Adjustment

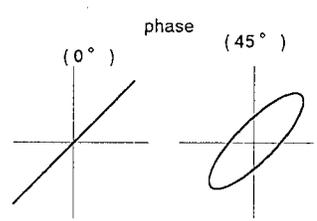

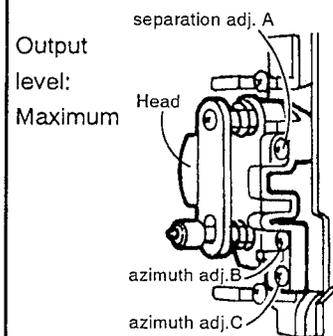

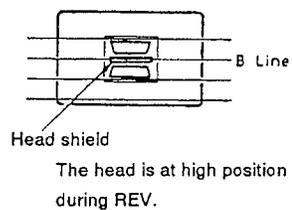

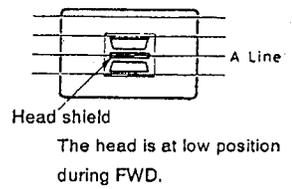

- Preset memory Initialization

Band	Preset Memory				
	M1/M6	M2	M3	M4	M5
FM(MHz)	87.5	89.9	97.9	105.9	107.9
AM(kHz)	530	600	1000	1500	1710

- Manual Tuning Up/Down Frequency

- [FM]**;200kHz Step
- [AM]**;10kHz Step

Item	Conditions	Adjustment and Confirmation methods	S.Values	Adjust
<p>1. Head azimuth adjustment</p>	<p>Test tape:                      SCC - 1659                      MTT942SP(10kHz)</p>	<p>◆ Head height adjustment                      ※ Adjust the azimuth directly. When you adjust the height using a mirror tape, remove the cassette housing from the mechanism chassis. After installing the cassette housing, perform the azimuth adjustment.</p> <ol style="list-style-type: none"> <li>1. Load the SCC-1659 mirror tape. Adjust with height adjustment screw A and azimuth adjustment screw B so that line A of the mirror tape runs in the center between Lch and Rch in the reverse play mode.</li> <li>2. After switching from REV to FWD then to REV, check that the head position set in procedure 1 is not changed. (If the position has shifted, adjust again and check.)</li> <li>3. Adjust with azimuth adjustment screw B so that line B of the mirror tape runs in the center between Lch and Rch in the forward play mode.</li> </ol> <p>◆ Head azimuth adjustment</p> <ol style="list-style-type: none"> <li>1. Load VTT724 (VT724) (1 kHz) and play it back in the reverse play mode. Set the Rch output level to max.</li> <li>2. Load VTT703 (VT703) (10 kHz) and play it back in the forward play mode. Adjust the Rch and Lch output levels to max. with azimuth adjustment screw B. In this case, the phase difference should be within 45°.</li> <li>3. Engage the reverse mode and adjust the output level to max. with azimuth adjustment screw C. (The phase difference should be 45° or more.)</li> <li>4. When switching between forward and reverse modes, the difference between channels should be within 3 dB. (Between FWD L and R, REV L and R)</li> <li>5. When VTT721 (VT721) (315 Hz) is played back, the level difference between channels should be within 1.5 dB.</li> </ol>	<p>S.Values</p>	<p>Adjust</p>
<p>2. Tape speed and wow flutter confirmation</p>	<p>Test tape:VTT712                      (3kHz)</p>	<ol style="list-style-type: none"> <li>1. Check to see if the reading of the F. counter/wow flutter meter is within 2940~3090(FWD/REV), and less than 0.35% (JIS RMS).</li> <li>2. In case of out of specification, adjust the motor with a built-in volume resistor.</li> </ol>	<p>Tape speed:                      2940                      ~3090Hz                      Wow flutter:                      less than 0.35%</p>	<p>Built-in volume resistor</p>
<p>3. Playback frequency response confirmation</p>	<p>Test tape:VTT724                      (1kHz)                      VTT739                      (63Hz/1kHz/10kHz)</p>	<ol style="list-style-type: none"> <li>1. Play test tape VTT724, and set the volume position at 2 V</li> <li>2. Play test tape VTT739 and confirm 1kHz/10kHz:                          - 1 ± 3dB,                          1kHz/63Hz: 0 ± 3dB.</li> <li>3. When 8 kHz is out of specification, it will be necessary to read adjust the azimuth</li> </ol>	<p>Speaker out                      1kHz/63Hz                      : 0 ± 3dB                      1kHz/10kHz                      : - 1 ± 3dB</p>	

Item	Conditions	Adjustment and Confirmation methods	S.Values	Adjust
4. Maximum out put power confirmation	Test tape :VTT721 (1kHz) volume:maximum BASS/TRE:center	1. Confirm the rear output be more than 4.5V((5W).(4-speaker connected) 2. Confirm that consumption current at above condition to be less than 10A. 3. Sound leakage should not occur at volume minimum. 5. Oscillation should not occur at BASS/TRE at maximum.	Output level:more than 5W(4.5V) Consumption current :less than 10A	
5. Line out level adj.	Test tape:VTT721 (1kHz) Test point : Line out Load :20k	1. Comfirm the line out level to be within 0.8~1.3V	Line out level 0.8~1.3V	

### ■ Tuner section adjustment

Item	Conditions	Adjustment and Confirmation methods	S.Values	Adjust
1.FM 0V adjustment	Test point: TP1 , TP2 FM 97.9MHz, 66 dB non modulation	Adjust L21 so that the TP1 between TP2 DC voltage level become 0 V when 97.9 MHz is indicated.	$0 \pm 10\text{mV}$	L21
2.BLEND adjustment	TP:AFout FM97.9MHz,52dB $\mu$ (1kHz,67.5kHz Dev, Pilot : 7.5kHz Dev)	1. With signal of 97.9MHz,52dB $\mu$ supplied from the signal generator to L or R channel. 2.Adjust VR21 so that speaker output level of the other channel becomes 20dB and signal levels of the two channels are balanced.	$20 \pm 1\text{dB}$	VR21
3.FM stereo indication sensitivity	97.9MHz,1kHz, 67.5kHz dev. pilot 7.5kHz dev.	1. When input is 16dB $\mu$ ,ST indication appears. 2. When input is 0dB $\mu$ ,STindication disappears. 3. By pushing MONO button when receiving stereo signal ,indication should change from ST to MO and signal become mono.	ON:16dB $\mu$	
4. FMstero separation	97.9MHz,1kHz 67.5kHz dev. pilot 7.5kHz,66dB $\mu$	1. Separation to be more than 24dB. 2. The left / right difference to be within 3dB.	More than 24dB	
5. FM S/N ratio	97.9MHz,66dB $\mu$	Output difference level between modulation ON/OFF to be more than 47dB.	more than 47dB	
6. Radio/tape level difference	1kHz 22.5kHz dev. 66dB $\mu$ Tape VTT724	Against VTT724, the output difference level to be within $-7 \pm 3\text{dB}$ .	Within $-7 \pm 3\text{dB}$

Terminal No.	Symbol	Designation	Description	Output form
34~52  1~4	LCD <sub>23</sub> ┆ LCD <sub>5</sub>  LCD <sub>4</sub> ┆ LCD <sub>1</sub>	LCD Segment Outputs	<p>These are segment signal output terminals to the LCD panel. 46 dots can be displayed in maximum based on the matrixes with COM<sub>1</sub> and COM<sub>2</sub>. By executing LCDD command, signals will be output to these terminals. The contents of optional address memory in the data memory (RAM) specified by the first operand section of LCDD command will be output to a digit of LCD matrix specified by the second operand section.</p> <p>When an even number of digit is specified at this time, the contents of data memory specified by the first operand section will be output to these terminals through a segment PLA (programmable logic array). 32 kinds of patterns can be generated by the segment PLA.</p> <p><b>Note:</b> During power supply making (<math>V_{DD} = \text{Low} \rightarrow \text{High}</math>) and execution of CKSTP command, the "Low" level (display OFF mode) will be output automatically.</p>	COMS push-pull
5, 6	COM <sub>2</sub> COM <sub>1</sub>	LCD Common Output	<p>These are common signal output terminals to the LCD panel. 46 dots can be displayed in maximum based on the matrixes with LCD<sub>1</sub>~LCD<sub>23</sub>.</p> <p>Three values of GND, <math>1/2V_{DD}</math> and <math>V_{DD}</math> (5 msec. interval) will be output at a period of 50 Hz. The segment wherein a potential difference of <math>\pm V_{DD}</math> has occurred between these terminals and LCD<sub>1</sub>~LCD<sub>23</sub> will be turned on.</p> <p><b>Note:</b> During power supply making (<math>V_{DD} = \text{Low} \rightarrow \text{High}</math>) and execution of CKSTP command, the "Low" level (display OFF mode) will be output automatically.</p>	COMS push-pull
7, 33	$V_{DD}$	Power Supply	<p>This is a power supply terminal to the device. When the device is in action, <math>5\text{ V} \pm 10\%</math> will be supplied to it. When storing internal data memory (RAM) (during execution of CKSTP command), the voltage can be lowered to 2.5 V.</p> <p>When <math>0 \rightarrow 4.5\text{ V}</math> has been supplied to this terminal, the device will be reset and the program be started from "0" address.</p> <p><b>Note:</b> Since 7 PIN and 33 PIN are connected inside chips, there is no need to supply any voltage to both of the pins. When voltage is supplied to one of the pins, both of them will act. However, be careful since the 33 PIN is not connected in the case of the ES parts (ceramic package).</p>	
8	VCOH (FM)	Local Oscillation Signal Input	<p>This is a local oscillation output (VCO output) terminal from 10 to 150 MHz (<math>0.5\text{ V}_{p-p}</math> min.). Provided in this terminal are 1/2 fixed division prescaler, 1/32 and 1/33 two modulus division prescalers. Therefore, it is necessary to determine the division value of programmable divider from half the frequency of the local oscillator output (VCO output).</p> <p>When the HF command has been executed based on the direct division and pulse swallow systems, namely, when the VCOL terminal has been selected, then the VCOH terminal will be placed automatically into "pull-down" state (GND).</p> <p>Since an AC amplifier is built in, the input should be made after condenser cutting.</p>	Input

Terminal No.	Symbol	Designation	Description	Output form														
9	VCOL (AM)	Local Oscillation Signal Input	<p>A local oscillation input (VCO output) from 0.6 to 60 MHz (0.3 V<sub>DD</sub> MIN.) will be input to this terminal.</p> <p>This terminal will be selected and become active when the HF command has been executed based on the direct division and pulse swallow systems. However, be careful since the upper limit of frequency and lower limit of division ratio which can be input vary between the above two division systems.</p> <table border="1"> <thead> <tr> <th>Division system</th> <th>Input voltage (min.)</th> <th>Input frequency</th> <th>Division ratio</th> </tr> </thead> <tbody> <tr> <td>Direct division</td> <td>0.1 V<sub>DD</sub></td> <td>0.59 ~ 20 MHz</td> <td>16 ~ (2<sup>12</sup> - 1)</td> </tr> <tr> <td rowspan="2">Pulse swallow (HF command execution)</td> <td>0.1 V<sub>DD</sub></td> <td>0.6 ~ 40 MHz</td> <td rowspan="2">1024 ~ (2<sup>17</sup> - 1)</td> </tr> <tr> <td>0.3 V<sub>DD</sub></td> <td>0.6 ~ 50 MHz</td> </tr> </tbody> </table> <p>When the VHF command has been selected based on the pulse swallow system, namely, when the VCOH terminal has been selected, then the VCOL terminal will be placed automatically into pull-down state (GND). Since an AC amplifier is built in, the input should be made after condenser cutting.</p>	Division system	Input voltage (min.)	Input frequency	Division ratio	Direct division	0.1 V <sub>DD</sub>	0.59 ~ 20 MHz	16 ~ (2 <sup>12</sup> - 1)	Pulse swallow (HF command execution)	0.1 V <sub>DD</sub>	0.6 ~ 40 MHz	1024 ~ (2 <sup>17</sup> - 1)	0.3 V <sub>DD</sub>	0.6 ~ 50 MHz	Input
Division system	Input voltage (min.)	Input frequency	Division ratio															
Direct division	0.1 V <sub>DD</sub>	0.59 ~ 20 MHz	16 ~ (2 <sup>12</sup> - 1)															
Pulse swallow (HF command execution)	0.1 V <sub>DD</sub>	0.6 ~ 40 MHz	1024 ~ (2 <sup>17</sup> - 1)															
	0.3 V <sub>DD</sub>	0.6 ~ 50 MHz																
10	GND	Ground	This is a ground terminal of the device.															
11, 12	EO <sub>1</sub> EO <sub>2</sub>	Error Outputs	<p>These are PLL error output terminals. When the divided local oscillation frequency (VCO output) is higher or lower than the reference frequency, the "High" or "Low" level will be output from these terminals. When the frequency complies with the reference frequency, the terminals will be floating.</p> <p>These error outputs will be input to the external LPF (low pass filter) and applied to varactor diode through the LPF. Meanwhile, since EO<sub>1</sub> and EO<sub>2</sub> are output in a same waveform, either of the terminals can be selected optionally.</p>	COMS 3 states														
13	CE	Chip Enable	<p>This is a device selection signal input terminal. Set this terminal to "High" level to let the device perform normal action and to "Low" level when the device is not used. While this terminal is kept at "Low" level, the PLL will be under Disable state. However, 134 μsec. or shorter input will not be accepted.</p> <p>In case the CKSTP command has been executed when the CKSTP command is being used in program and the CE terminal is at "Low" level (The SKSTP command is effective only where "CE = Low", and acts similarly as in the case of NOP command where "CE = Low"), then the internal clock generator and CPU will be placed into standstill, and the memory can be protected at low consumption current (10 μA or less). At this time, the display outputs (LCD<sub>1</sub> ~ LCD<sub>20</sub> and COM<sub>1</sub> ~ COM<sub>2</sub>) will be placed automatically into display OFF mode ("Low level).</p> <p>Input When the CE terminal has been selected from "Low" level to "High" level, the device will be reset and the program start from "0" address. At this time, moreover, the I/O port (Port A) will be set to the input mode.</p>	input														

Terminal No.	Symbol	Designation	Description	Output form
14	NC	No-Connection	It is impossible to use this terminal since it is not connected to an internal chip. However, there will be no problem if this terminal is connected freely to OPEN, GND, $V_{DD}$ and so forth.	
15, 16	XI XO	X'tal	This is a crystal oscillator connection terminal, and used for connecting 4.5 MHz crystal. The oscillation frequency (4.5 MHz) should be adjusted while observing the XO terminal.	Input CMOS
17~20	PA <sub>3</sub> ⋮ PA <sub>0</sub>	Port A	This port is a 4 bit L/O (input/output) port. With this port, it is possible to specify input and output every 1 bit according to the contents of 1FM address in data memory (RAM) called "PAIO" word (Refer to Notes 1 and 2).	CMOS push-pull
21~24	K <sub>3</sub> ⋮ K <sub>0</sub>	Key Return Signal Inputs	This are a 4 bit input port and used normally as a key matrix input port. When the KIN or KI command has been executed, the status of this terminal will be read in the data memory (RAM) specified by the corresponding operand section.  Meanwhile, this is of such a special configuration as to enable use of higher 2 bits (PC <sub>3</sub> and PC <sub>2</sub> ) of Ports B and C as key return signal sources.	Input
25~28	PB <sub>3</sub> ⋮ PB <sub>0</sub>	Port B	This is a 4 bit output port, and used as a a port for key return signal source of key matrix since the sink current is made smaller particularly in view of its configuration.  In other words, when this port is used as a key return signal source, the external diode can be omitted. In case this port is used as a normal output port, the sink current will become too small depending on the driving circuit. Therefore, a correct low level would not be output in some cases. In such a case, connect the pull-down resistor to this port (Refer to Notes 1 and 3).	CMOS push-pull
29~32	PC <sub>3</sub> ⋮ PC <sub>0</sub>	Port C	This is a 4 bit output port. The absorption current in PC <sub>3</sub> and PC <sub>2</sub> among 4 bits is made particularly small in view of configuration similarly as in the case of Port B above. Therefore, this port is used as a key return signal source of key matrix (Refer to Notes 1 and 3).	COMS push-pull

**Note 1.** In the port control commands (IN, OUT, SPB, RPB and other commands), PA<sub>1</sub> and PA<sub>2</sub> correspond respectively to the lowest and highest bits of resistor or operand data, and so in the case of Ports B and C.

**Note 2.** When the device has been reset ( $V_{DD} = \text{Low} \rightarrow \text{High}$  and  $\text{CE} = \text{Low} \rightarrow \text{High}$ ) and when the CKSTP command has been executed, then the Port A (I/O port) will be set to input mode.

**Note 3.** Since instable data will be output to the special output ports (Ports B and C) during power supply making ( $V_{DD} = \text{Low} \rightarrow \text{High}$ ), it is necessary to initialize the ports with program. Moreover, when the CE terminal is "Low"  $\rightarrow$  "High" and during execution of the CKSTP command, the contents of the output data will not be changed from those of the previous data. In this case, therefore, it is necessary to initialize the ports with program as required
