SPECIFICATION

Classification	Specifications
Picture Tube	17" (16V) Full Square, Flat Face, 90° deflection, 0.28 mm Dot Pitch, Silica-coated with anti-electrostatic, Medium short persistence phosphor.
Scanning Frequency Horizontal Vertical	30 kHz to 64 kHz (Automatic). 50 Hz to 100 Hz (Automatic).
Display Colors Analog Input	Unlimited Colors.
Maximum Resolution Horizontal x Vertical	1280 Dots x 1024 Lines.
Input Video Signal	Analog 0.714 Vp-p positive at 75 Ω terminated.
Input Sync Signal	Separate Sync : TTL level positive/negative Composite Sync : TTL level positive/negative Sync on green : Composite sync 0.286 Vp-p negative Video 0.714 Vp-p positive
Video Band Width (Pixel Time)	106 MHz.
Power Supply Power consumption	100 Watt (MAX). AC 100-120/220-240 Volt, 60/50 Hz \pm 3 Hz .
Active Display	Horizontal : 281 mm \pm 3 mm (5:4 ratio), 300 mm \pm 3 mm (4:3 ratio). Vertical : 225 mm \pm 3 mm. * Active display area is changed by signal timing.
Dimension Unit (HxWxD) Carton (HxWxD)	17.1 x 16.6 x 17 inches (435 x 421 x 431 mm). 22 x 21.2 x 21.5 inches (558 x 538 x 547 mm).
Weight Approximately Net Gross	46.3 Lbs (21 Kg). 55.1 Lbs (25 Kg).
Environmental Considerations Operating Temperature Humidity Storage Temperature Humidity	32° F to 104° F (0° C to 40° C). 10 % to 80 %. -4° F to 113° F (-20° C to 45° C). 5 % to 95 %.
MPRII compliance	This model complies with SWEDAC (MPRII) recommendations for reduced electric and magnetic fields.

NOTE : DESIGNS and SPECIFICATIONS are subjected to change without prior NOTICE.

SAFETY PRECAUTIONS

Service work should be performed only by qualified service technicians who are thoroughly familiar with all of the following safety checks and servicing guidelines:

1. Warning

- 1) For continued safety, do not attempt to modify the circuit.
- 2) Disconnect the AC power before servicing.
- 3) Semiconductor heat sinks are potential shock hazards when the chassis is operating.

2. Servicing the High Voltage System and Picture Tube

When servicing the high voltage system, remove the static charge by connecting a 10 kohm resistor in series with an insulated wire (such as a test probe) between the chassis and the anode lead. (The AC line cord should be disconnected from the AC outlet.)

- 1) The picture tube in this display monitor employs integral implosion protection.
- 2) Replace with a tube of the same type and number for continued safety.
- 3) Do not lift the picture tube by the neck.
- 4) Handle the picture tube only when wearing shatter proof goggles and after discharging the high voltage anode completely.

3. X-Radiation and High Voltage Limits

- 1) Be sure all service personnel are aware of the procedures and instructions covering X-radiation. The only potential source of X-ray in a current solid state display monitor is the tube. However, the picture tube does not emit measurable X-ray radiation if the high voltage is as specified in the "high voltage check" instruction. It is only when high voltage is excessive that X-radiation is capable of penetrating the shell of the picture tube, including the lead in glass material. The important precaution is to keep the high voltage below the maximum level specified.
- 2) It is essential that serviceman have available at all times an accurate high voltage meter. The calibration of this meter should be checked periodically.
- 3) High voltage should always be kept at the rated value no higher. Operation at high voltages may cause a failure of the picture tube or high voltage circuitry and, also under certain conditions, may produce radiation in excess of desirable levels.

- 4) When the high voltage regulator is operating properly there is no possibility of an X-radiation problem. Every time a color chassis is serviced, the brightness should be tested while monitoring the high voltage with a meter to be certain that the high voltage does not exceed the specified, value and that it is regulating correctly.
- 5) Do not use a picture tube other than that specified, or make un recommended circuit modifications to the high voltage circuitry.
- 6) When troubleshooting taking test measurements on a display monitor with excessively high voltage, avoid being unnecessarily close to the display monitor. Do not operate the display monitor longer than is necessary to locate the cause of excessive voltage.

4. Fire and Shock Hazard

Before returning the display monitor to the user, perform the following safety checks:

- 1) Inspect all lead dress to make certain that the leads are not pinched or that hardware is not lodged between the chassis and other metal parts in the display monitor.
- 2) Inspect all protective devices such as nonmetallic control knobs, insulating materials, cabinet backs, adjustment and compartment cover or shields, isolation resistor-capacitor networks, mechanical insulators, etc.
- 3) To be sure that no shock hazard exists, checks for leakage current in the following manner:
 - ① Plug the AC line cord directly into an AC 100-120/22-240 Volt outlet. (Do not use an isolation transformer for this test)
 - ② Using two clips leads, connect 1.5 kohm, 10 watt resistor paralleled by a 0.15 uF capacitor in series with all exposed metal cabinet parts and a known earth ground, such as electrical conduct or electrical ground connected to earth ground.
 - ③ Use a SSVM or VOM with 1000 ohms per-volt or higher sensitivity to measure the AC voltage drop across the resistor. (See Figure 1.)

SAFETY PRECAUTIONS

- ④ Connect the resistor to all exposed metal parts having a return path to the chassis (metal cabinet, screw heads, knobs and shafts, escutcheon, etc.) and measure the AC voltage drop across the resistor.
- ⑤ Any reading of 5.25 Volt RMS (this corresponds to 3.5 milliampere AC) or more is excessive and indicates a potential shock hazard which must be corrected before returning the display monitor to the user.

5. Product Safety Notices

Some electrical and mechanical parts have special safety-related characteristics which are often not evident from visual inspection, nor can the protection they give necessarily be obtained by replacing them with components rated for higher voltage, wattage, etc. Parts that have special safety characteristics are identified by \triangle on schematics and parts lists. Use of a substitute replacement that does not have the same safety characteristics as the recommended replacement part might create shock, fire and/or other hazards. Product safety is under review continuously and new instructions are issued whenever appropriate.

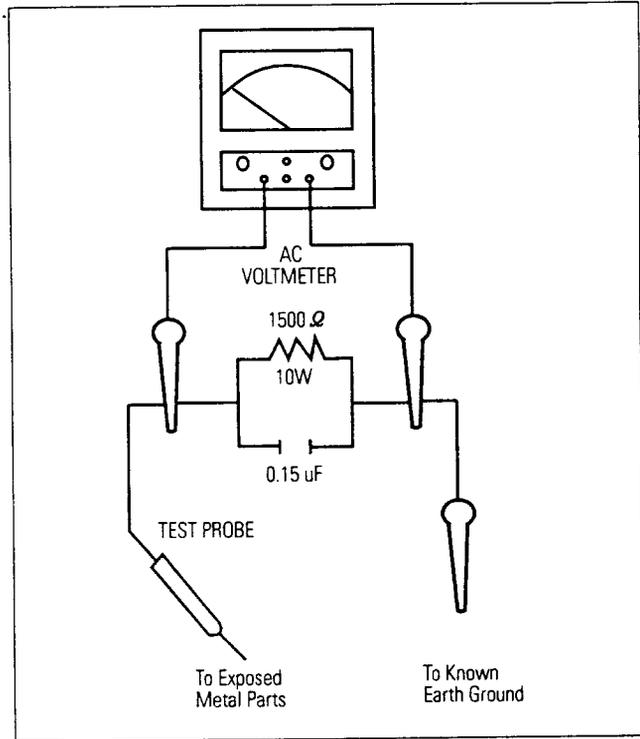

Figure1. Leakage Current Test Circuit

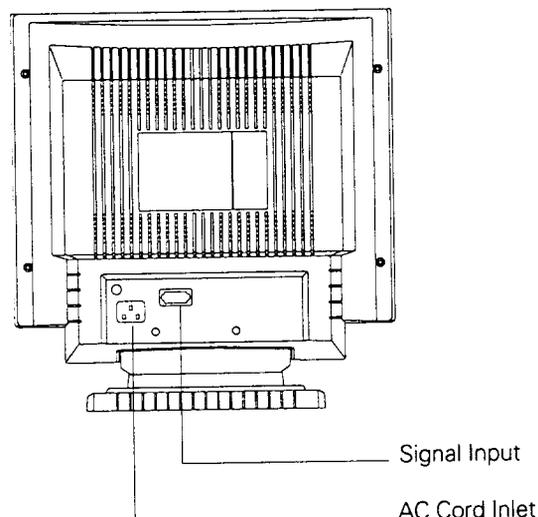

GENERAL INFORMATION

1. Features

- 1) 17 inch (16 inch visual) Flat Square Technology CRT reduces glare and enhances viewing area.
- 0.28 mm Dot Pitch
- 2) Anti-Static CRT coating eliminates static electric shock and helps keep the screen dirt free.
- 3) Dynamic focusing provides optimum clarity in all areas of the display.
- 4) Automatically scans horizontal frequencies from 30-64 kHz, and vertical frequencies from 50-100 Hz.
- 5) Compatible with a wide variety of video standards including VGA, Super-VGA, IBM XGA, XGAII, MacintoshII, IBM 8514/A, 1024x768 non-interlaced, and 1280 x 1024 non-interlaced.
- 6) With the optional cable adapter this monitor is compatible with the MacintoshII family, the Macintosh LC/LCII and QUADRA series.
- 7) Supports VESA flicker-free modes.
- 8) Microprocessor based digital control system saves up to 11 user definable display settings. Also includes 12 factory preset display settings.
- 9) This model complies with SWEDAC(MPRII) recommendations for reduced electric and magnetic fields.
- 10) Power supply operates on AC 100-120/220-240 Volt 60/50 Hz for use all over the world.
- 11) Your display has been designed to operate on all power systems, including "IT" power systems.
- 12) Power Management System
Power management circuit, when signaled by the computer system, will reduce power consumption when the computer system is not in use.
- 13) Optional Feature
Please consult your dealer for information about these optional features. Apple Macintosh connector adapter are available for connecting the monitor to the Apple Macintosh family, Macintosh LC/LCII/LCIII, Centris, and Quadra series computer.

2. Installation

This monitor can be connected to any IBM compatible analog display adapter. Such adapters include VGA, 8514/A, XGA, and the built-in video system of IBM PS/2 computers and compatibles. Also, this monitor can be connected to a high resolution (1280 x 1024) video controller, such as those used with CAD / CAM applications. Both connections can be used separately or simultaneously. Selection between the two signal sources is controlled by a front panel switch.

To attach the monitor to your system, use the following instructions:

- 1) Turn off the power to the computer.
- 2) Connect video signal cable to the D-SUB connector on the rear of the monitor.
- 3) Connect video signal cable to the video port of the computer's controller.
- 4) Insert AC power cord into the monitor and then into an AC power outlet.
- 5) Before turning on the power to the monitor and computer, check your computer's owner's manual for instructions about turning on equipment connected to the computer. Also, check for any instructions for your video system when using a multi-sync monitor. In some cases, jumper or switch settings may be required for the video board to output extended resolution modes.
- 6) To turn on the monitor, push the power switch. The power indicator LED will light. To turn the monitor off, push the power switch again. The power indicator LED will also turn off.

GENERAL INFORMATION

3. Connection to your computer (MacintoshII Family)

With the cable adapter, this monitor is compatible with Apple MacintoshII Family, Macintosh LC/LCII /LCIII, Centris, and Quadra series computers. (Please see page 12 for the pin assignment.)

To attach the monitor to your system, follow these instructions:

- 1) Turn off the power to the monitor and computer.
- 2) Connect the cable adapter to the video output port of your video controller. Tighten the screws on the cable adapter.
- 3) Connect the 9 pin side of the signal cable to the 9 pin D-SUB connector on the rear side of the monitor.
- 4) Connect the 15 pin side of the signal cable to the other end of the cable adapter. Tighten the screws of the signal cable to ensure proper connection.
- 5) Connect one end of the power cable to the monitor and the other end to the power outlet.
- 6) Turn on the monitor and the computer.

14	Parallelogram

4-2. Basic Controls and LED Indicator Functions

1) Power Switch

Use to switch monitor power on and off. Push the power switch once to turn monitor power on. The indicator LED glow green. Push the switch again to turn monitor power off.

2) Power Indicator (Dual color)

When the monitor is powered on, and no adjustments are being made, the indicator LED glows green. When an adjustment function is selected the indicator LED glows orange.

3) Contrast Control

Use to adjust the contrast level of the displayed image. Contrast controls the difference between dark and light areas of the displayed image.

4) Brightness Control

Use to adjust the overall brightness of the displayed image.

The Display Adjustment

Use the Variable adjustment control to adjust the displayed image when a control function is enabled (the indicator's color is orange).

Note : After completing an adjustment the indicator LED will return to short green after 3-4 seconds showing that your adjustment has been saved. The OSD will remain on for about 10 seconds.

5) Variable Adjustment Control

Turn the Variable adjustment control counterclockwise to decrease the value of the adjustment function. Turn the Adjustment control clockwise to increase the value of adjustment function.

GENERAL INFORMATION

Microprocessor Controls & Functions

General Description

The monitor has preset display settings for each of the standard signal timings listed on the timing chart. In other words, the monitor will automatically adjust itself to an optimum size and position when it senses one of the standard signal timings. However, some users wish to adjust the monitor to their preferred setting rather than the factory preset. The microprocessor controlled adjustments will microprocessor controlled adjustments will automatically memorize the display settings that you prefer a specific signal timing and automatically adjust itself when the monitor senses that signal. Up to 11 different timing/settings can be saved.

Control Function Buttons

The monitor incorporates single and multi-function buttons. Single function buttons, when pressed, allow access to one of the control functions. Multi-function buttons can access a second function in addition to the first one. To access the second adjustment function, push the function button twice. The chart below shows you the buttons that allow access to a second function.

Button No.	PUSH	
	ONCE	TWICE
6	Horizontal Position	Help
7	Vertical Position	Help
8	Horizontal Size	Help
9	Vertical Size	Help
12	Trapezoid	Help
13	Side Pincushion	Help

Note: If you push a button three times the selected function returns to normal condition.

The Display Adjustment

Use the variable adjustment control to adjust the displayed image when a control function is enabled (the indicator's color is orange).

On Screen Display

This monitor features an On Screen Display (OSD) that shows information about the display settings to the user. The OSD will appear on the screen when a function button is selected. The OSD will show the name, range, and current setting of that control function.

In addition, the OSD will show the current input signal frequency, and the list of factory and user preset timing. The OSD will remain activated approximately 10 seconds after any adjustments are completed.

6) Horizontal Position / Help

First function : Horizontal Position
Push this button once to adjust the horizontal position (centering) of the display. Use the variable adjustment control to adjust.

Second function : Help
Push this button twice to access the help function. The OSD will show the contents of the factory preset timing modes and user modes. Use the variable adjustment control to "page" through the list.

7) Vertical Position / Color

First Function : Vertical Position
Push this button once to adjust the vertical position(centering) of the display. Use the variable adjustment control to adjust.

Second Function : Help
Push this button twice to access the help function. The OSD will show the contents of the factory preset timing modes and user modes. Use the variable adjustment control to "page" through the list.

8) Horizontal Size / Help

First Function : Horizontal Size
Push this button once to adjust the horizontal size (width) of the display. Use the variable adjustment control to adjust.

Second Function : Help
Push this button twice to access the help function. The OSD will show the contents of the factory preset timing modes and user modes. Use the variable adjustment control to "page" through the list.

9) Vertical Size/Help

First Function: Vertical Size
Push this button once to adjust the vertical size(height) of the display. Use the variable adjustment control to adjust.

Second Function: Help
Push this button twice to access the help function. The OSD will show the contents of the factory preset timing modes and user modes. Use the variable adjustment control to "page" through the list.

GENERAL INFORMATION

10) Degauss

Magnetic fields can build up on the CRT and cause color impurity. Use the DEGAUSS switch to demagnetize the CRT. Push the switch once to activate the degaussing circuit. The degaussing circuit automatically turns itself off after a few seconds.

11) Recall

Use this button to recall factory preset settings. When the recall button is pushed, the indicator LED will change color from green to orange (the same as any other function) and the OSD will appear. Keep pressing the recall button for 2-3 seconds until the indicator LED's color is changed to green which indicates that the factory settings for that timing have been recalled. The OSD will show the progress of the recall function.

Note: This operation resets all of the data in the user memory area for the current signal timing.

12) Trapezoid/Help

First Function: Trapezoid

Push this button once to access the trapezoid adjustment control to correct any trapezoid distortion of the display.

Second function: Help

Push this button twice to access the help function. The OSD will show the contents of the factory preset timing modes and user modes. Use the variable adjustment control to "page" through the list.

13) Side Pincushion/Help

First Function: Side Pincushion

Push this button once to adjust the vertical sides of the display from bowing in (pincushion) or bowing out (barrel distortion). Turn the variable adjustment control until the vertical sides are straight.

Second Function: Help

Push this button twice to access the help function. The OSD will show the contents of the factory preset timing modes and user modes. Use the variable adjustment control to "page" through the list.

14) Parallelogram

To activate the parallelogram adjustment function press the horizontal position button and the vertical position button simultaneously for 4-5 seconds. Use the variable adjustment control.

About burn-in mode : You can operate or disable power saving function if you need. In no signal state (video cable is disconnected from this monitor), the indicator's color is orange. Push horizontal position button before monitor run into power saving mode, the power saving function is disabled and then you can warm up this monitor. This burn-in mode is removed when the power of monitor is off and on again.

GENERAL INFORMATION

5. Option Power Management Circuit (Power Saving Function)

If your computer system features a display power management function, this monitor, when signaled, will enter power saving modes. The purpose of power management is to automatically reduce power consumption when the computer system is not in use. This monitor can enter 3 different power saving modes as described below.

Table: Display Power Management Signaling (DPMS) Standard

State Sync	Normal Operation	Power Saving Function Mode		
		Stand-by mode	Suspend mode	Power-Off mode
Horizontal Vertical Video	Active Active Active	Inactive Active Blanked	Active Inactive Blanked	Inactive Inactive Blanked
Remark (LED Color)	Green	Orange	Orange/Green Blinking (0.5 Sec interval)	Orange Blinking (1 Sec interval)
Power Consumption	100W (Max)	60W (Max)	Less than 30W	Less than 8W

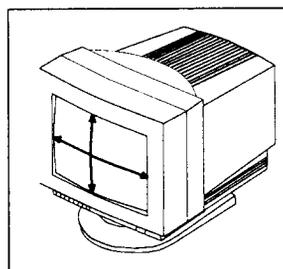

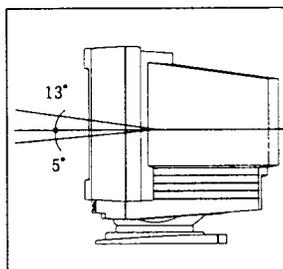

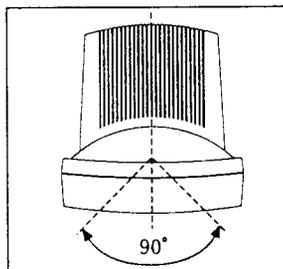

Note: This monitor automatically returns to normal operation state when horizontal and vertical sync rare detected.

When you turn power off in power-off mode, LED indicator may continuously blink on-off about for 4 to 5 seconds.

6. Use of the tilt-swivel

With the tilt-swivel, this unit can be adjusted to be viewed at your desired angle within 90° will the swivel and 18° with the tilt.

To turn the unit horizontally, hold it at its bottom with your both hands as illustrated below.

GENERAL INFORMATION

7. Signal Connections and Pin Assignments

Sync Type Pin No.	9 Pin Side of the Signal Cable (Figure 1)			15 Pin Side of the Signal Cable (Figure 2)			Cable Adapter (Figure 3)
	Separate	Composite	Sync on green	Separate	Composite	Sync on green	Apple MACII

DISPLAY PERFORMANCE

1. Display Area

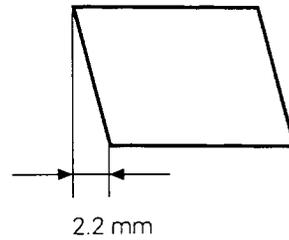

- 1) Width : 281 ± 3 mm (5:4 ratio)
 300 ± 3 mm (4:3 ratio)
- 2) Height : 225 ± 3 mm

2. Centering

- $|A - B| \leq 6.0$ mm
- $|C - D| \leq 6.0$ mm

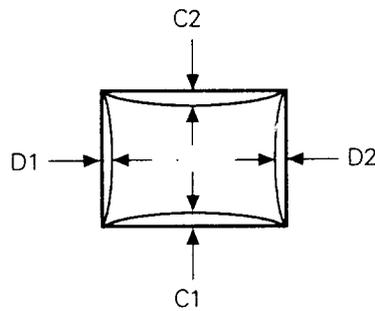

2) Parallelogram

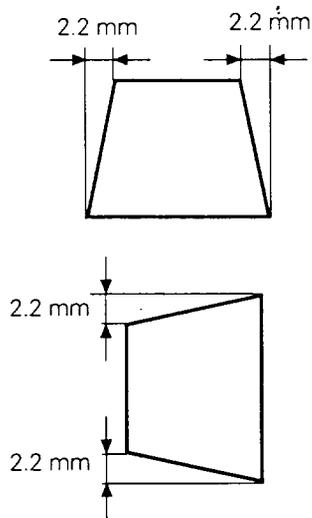

3) Pincushion

- $|C1|, |C2| \leq 2.2$ mm
- $|D1|, |D2| \leq 2.2$ mm
- $|D1 - D2| \leq 1$ mm

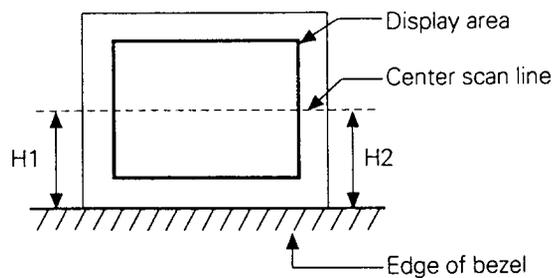

3. Distortion

1) Trapezoid

4) Rotation

- $|H1 - H2| \leq 2.5$ mm

DISPLAY PERFORMANCE

4. Linearity

1) Standard Mode : VESA EVGA/70Hz, SEC 1280/60Hz

Horizontal Linearity (HL) :

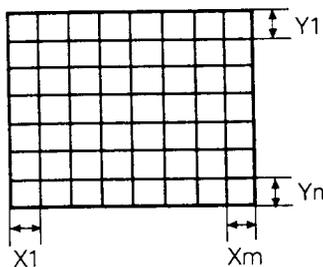

$$\frac{X_{\max} - \bar{X}}{\bar{X}} \times 100 \text{ or } \frac{\bar{X} - X_{\min}}{\bar{X}} \times 100 \leq 5\%$$

Vertical Linearity (VL) :

$$\frac{Y_{\max} - \bar{Y}}{\bar{Y}} \times 100 \text{ or } \frac{\bar{Y} - Y_{\min}}{\bar{Y}} \times 100 \leq 5\%$$

2) Other Modes

HL, VL \leq 7% for other signal timing modes.

m=16
n=12

3) Conditions

Display image : Crosshatch pattern

Maximum and minimum values should not be adjacent to each other.

Xmax is maximum value among X1 ~ Xm

Xmin is minimum value among X1 ~ Xm

$$\bar{X} = \frac{X1 + X2 \dots X_m}{m} \quad (m=16)$$

Ymax is maximum value among Y1 ~ Yn

Ymin is minimum value among Y1 ~ Yn

$$\bar{Y} = \frac{Y1 + Y2 \dots Y_n}{n} \quad (n=12)$$

5. Brightness Uniformity

Value	70% (Min) Variation = $\frac{C}{A} \times 100$
Conditions	Display Image : White flat field Luminance : 20 F/L at the center of display area A : Luminance at position of the highest C : Luminance at position of lowest brightness

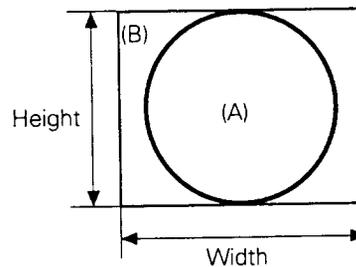

6. Color Point

Value	9300° K X = 0.283 \pm 0.02, Y = 0.298 \pm 0.02
Conditions	Display Image : White flat field at the center of display area. Luminance Min : 5 FL, Max : 20 FL

7. Misconvergence

Center area of display ("A" circle is 225 mm) (A) : 0.3 mm

Peripheral area of display (B) : 0.4 mm

1) Conditions

Display Image : Crosshatch pattern mixed with R,G,B colors.

8. Purity

Conspicuous mislanding shall not be visible within display area at distance of 50 cm from CRT surface

1) Conditions

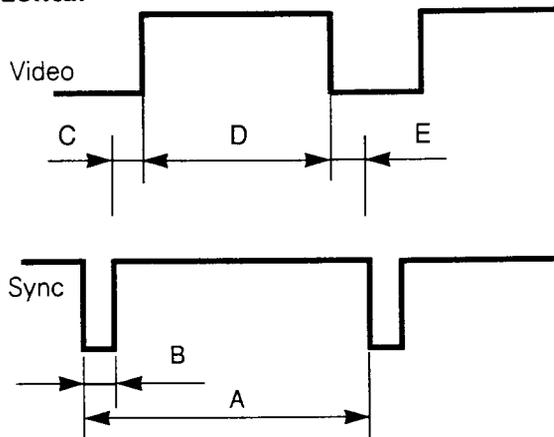

Display image : White flat field

Luminance : 15 FL at the center of display area.

BLOCK DIAGRAM

ALIGNMENT PROCEDURE

1. Adjustment Conditions and Precautions

- 1) Power supply voltage
AC 100-120 / 220-240 Volt (60/50 Hz)
- 2) Warm up time
The display must be on for 30 minutes before starting alignment. This is especially critical in color temperature and white balance adjustments.
- 3) Signal
Video analog 0.714 Vp-p positive at 75 ohm terminated.

SYNC On Green : Video 0.714 Vp-p positive
 : SYNC 0.286 Vp-p negative
SYNC : TTL level negative/positive,
 separate , composite
- 4) Scanning frequency
Horizontal : 30 kHz-64 kHz (Automatic)
Vertical : 50 Hz-100 Hz (Automatic)

- Unless otherwise specified, adjust at VESA
(fh: 56.4 kHz, fv: 70 Hz) signals.

CAUTION

- ☞ Alignment procedure without micom control jig: You can do adjust this step after set the monitor to the burn-in mode. (See Page 10)
- ☞ Alignment procedure with micom control jig: Before doing below steps,
 - ① Apply standard timing (1024x768/70 Hz) to a monitor.
 - ② Press a button #24 (Memory Dump Key) on the Micom control jig to call the data of the all mode based 1024x768/70 Hz.
 - ③ Please refer to block diagram of the Micom control jig on the Page 22.

2. Main PWB Prepare Adjustment

- 1) +B 195V Line adjustment
Adjust VR601 to be DC 195 ± 1 V at Q407 Heat Sink and GND. (Beam Contrast: MAX Brightness: MAX)
- 2) High voltage control
Adjust VR501 to be 26.0 kV ± 0.5 kV.
(Beam Contrast: MAX, Brightness: MIN)

3. Main PWB Adjustment

- Unless otherwise specified, adjust the EXT-VR
VR504 (Contrast) : MAX (Fully clockwise)
VR503 (Brightness) : So that no background raster appears.
- 1) Horizontal Hold
- Alignment procedure with micom control jig:
Push Horizontal OSC up button (#17 button) or Horizontal OSC down button (#18 button) to be DC 3.7 ± 0.5 V at pin3 of IC302 and GND.
- 2) Horizontal Raster Center
Adjust SW401 so that back raster position to come center when signal of 63.7 kHz/60 Hz applied.
- 3) Vertical Linearity
- Alignment procedure without micom control jig:
Push the horizontal position button and the horizontal size button simultaneously for 4-5 seconds to activate the vertical linearity adjustment function. Use the variable adjustment control.

- Alignment procedure with micom control jig:
Push vertical linearity up button (#15 button) or vertical linearity down button (#16 button) so that the image or pattern becomes optimum.
- 4) Horizontal Position Adjustment
- Adjustment procedure without micom control jig:
After pushing the Horizontal Position button, adjust variable adjustment control so that the image (or the test pattern) is placed on the center of the raster.

- Adjustment procedure with micom control jig:
Push Horizontal Position Up button (#1 button on the Micom Control Jig) or Horizontal Position Down button (#2 button) so that the image (or the test pattern) is placed on the center of the raster.

ALIGNMENT PROCEDURE

5) Vertical Position Adjustment -

- Alignment procedure without micom control jig:
After pushing the Vertical Position button, adjust variable adjustment control so that the image (or the test pattern) is placed on the center of the raster.

- Alignment procedure with micom control jig:
Push Vertical Position Up button (#⑤ button) or Vertical Position Down button (#⑥ button) so that the vertical image or pattern is placed on the center of the raster.

6) Horizontal Size Adjustment

- Alignment procedure without micom control jig:
After pushing the Horizontal Size button, adjust variable adjustment control so that the horizontal width of the displayed pattern becomes 300 mm. (The tolerance is ± 3 mm)

- Alignment procedure with micom control jig:
Push Horizontal Size Up (#④ button) or Horizontal Size Down button (#③ button) so that the horizontal width of the displayed pattern becomes 300 mm. (The tolerance is ± 3 mm)

7) Vertical Size Adjustment

- Alignment procedure without micom control jig:
After pushing the Vertical Size button, adjust variable adjustment control so that the vertical size of the displayed pattern becomes 225 mm. (The tolerance is ± 3 mm)

- Alignment procedure with micom control jig:
Push Vertical Size Up button (#⑦ button) or Vertical Size Down (#⑧ button) so that the vertical image or pattern becomes 225 mm. (The tolerance is ± 3 mm)

8) Side Pincushion Adjustment

- Alignment procedure without micom control jig:
After pushing the Side Pincushion button, adjust variable adjustment control so that each side of the pattern (or the image) becomes straight.

- Alignment procedure with micom control jig:
Push Side Pincushion Up button (#⑨ button) or Side Pincushion Down button (#⑩ button) so that each side of the pattern or image becomes straight.

9) Parallelogram Adjustment

- Alignment procedure without micom control jig:
Keep pressing the Horizontal Position button and Vertical Position button simultaneously for 4-5 seconds to active the parallelogram function. Use the variable adjustment control.

- Alignment procedure with micom control jig:
Push Parallelogram Up button (#⑬ button) or Parallelogram Down button (#⑭ button) so that the image or pattern becomes to rectangular.

10) Trapezoid Adjustment

- Alignment procedure without micom control jig:
Push trapezoid button once to access the trapezoid distortion function. Use the variable adjustment control to correct any trapezoid distortion of the display.

- Alignment procedure with micom control jig:
Push Trapezoidal Up button (#⑪ button) or Trapezoidal Down button (#⑫ button) so that the image or pattern becomes to rectangular.

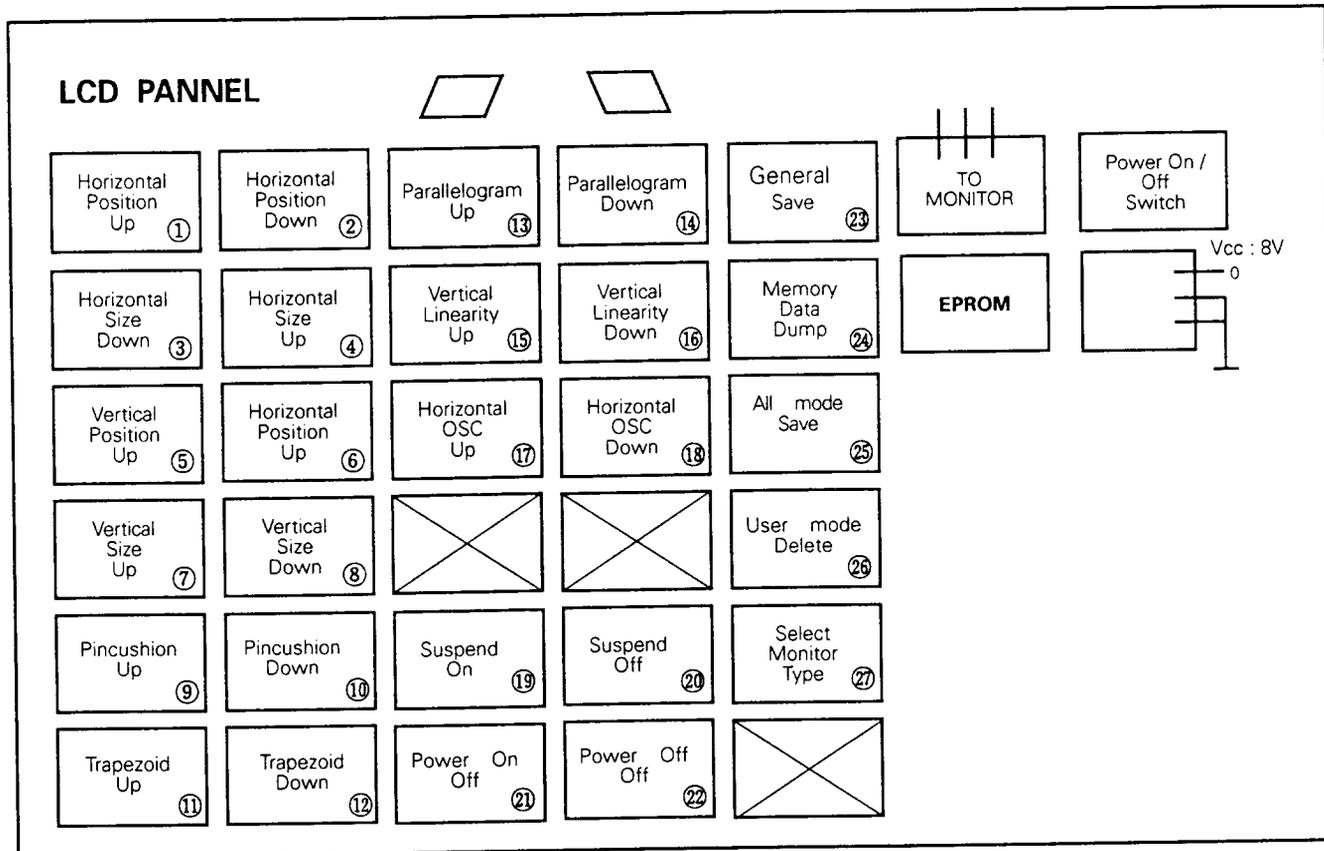

11) To save the picture data to a monitor

- Alignment procedure without micom control jig:
The alignment data is automatically saved after 4-5 seconds.

- Alignment procedure with micom control jig:
To save the picture data of a mode, push general save button. (#⑲ button on the Micom control)

ALIGNMENT PROCEDURE

The Block Diagram of the Micom control Jig (Alignment Procedure with micom control jig)

Note:

- 1) General Save button (#23 button)
 - To save the picture data of a mode individually.
- 2) All mode Save button (#25 button)
 - To save the picture data of all mode (16 modes) referring standard mode (1024x768/75 Hz).
- 3) Memory Dump button (#24 button)
 - To call the standard picture data from EPROM on the Micom Control Jig.
- 4) User Delete button (#26 button)
 - To delete the data in the user mode. (Saved by a user)
- 5) Select monitor type button (#27 button)
 - To select the picture data which be dumped from EPROM on the Micom Control Jig by a CRT. Keep pressing for 2 seconds.
- 6) Suspend mode test button (#19, #20 buttons)
 - To test the suspend function among the power management function.
 - Push suspend on button (#19 button), then the monitor becomes to suspend mode.
 - And push suspend off button (#20 button), then the monitor returns to normal operation status.
- 7) Power-Off mode test button (#21, #22 buttons)
 - To test the Power-Off function among the power management function.
 - Push Power-Off On button (#21 button), then the monitor becomes to Power-Off mode, and push Power-Off Off button (#22 button), then the monitor returns to normal operation status.

ALIGNMENT PROCEDURE

4. Adjustment of Video PWB

Note: Before performing this adjustment procedure, check that the video signals are as follows.

Video : Analog 0.714 Vp-p (at 75.0 Terminated).
SYNC : Synchronizing : Separate TTL level.
Unless otherwise specified,
use signal 1024x768/70 Hz for the adjustments.

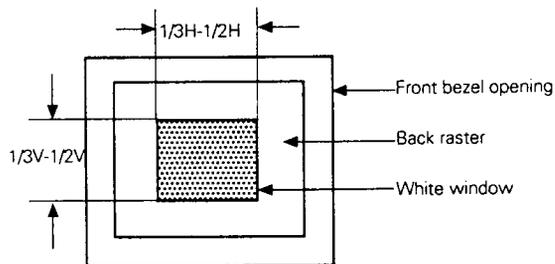

4-1. Adjustment of video amplitude and white balance of back raster

Locate VRR1 (R-Gain), VRG1 (G-Gain), VRB1(B-Gain) controls on the video PWB to mechanically center position. Locate VRR3 (R-Bias), VRG3 (G-Bias), VRB3 (B-Bias) controls on the video PWB to mechanically center position.

4-2. Video Contrast Adjustment

Adjust of gain control (1024x768/70 Hz)
(White window pattern)

- 1) Display the white window pattern (within a range for which the ABL circuit does not active even though maximum contrast is set) preferably with a video area of 1/3 to 1/2H and 1/3 to 1/2V.

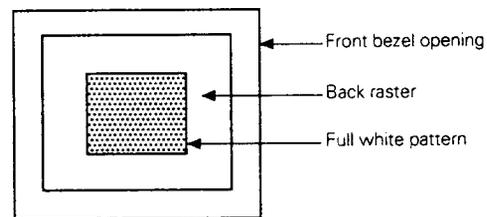

- 2) Turn brightness controls fully clockwise and turn the contrast controls fully counterclockwise.
- 3) Adjust the screen VR of FBT so that the brightness of back raster is to be 0.5 to 1.0 Ft/L. (Typically 0.7 Ft/L)
- 4) Adjust the VRR2(R-Bias), VRB2(B-Bias) so that the back raster color is white.
($X=0.283 \pm 0.02$, $Y=0.298 \pm 0.02$)
- 5) Turn the contrast controls fully clockwise and turn the brightness controls fully counterclockwise.
- 6) Adjust the VRR1 (R-Gain), VRB1 (B-Gain) so that the video is to be white. ($X=0.283 \pm 0.02$, $Y=0.298 \pm 0.02$)

- 7) Turn the contrast and the brightness controls fully clockwise.
- 8) Adjust the sub-contrast (VR3) so that the brightness of white window is to be 48 Ft/L.
- 9) And check whether the white window of video meets the above coordinate SPEC and brightness (over 48 Ft/L) or not.
- 10) If the white balance and brightness is off for the above SPEC, re-adjustment must be done. (Following above procedure again)

4-3. Adjustment of White Balance of Video

- 1) Display a full white pattern.

- 2) Turn the contrast and the brightness controls fully clockwise.
- 3) Adjust the ACL VR (VR502) controls on the main PWB so that the brightness of video is to be about 30 ± 1 Ft/L.

4-4. Fine Adjustment of White Balance

Note : White coordinate ($X=0.283 \pm 0.02$, $Y=0.298 \pm 0.02$)
Do not touch VRG1 (G-Gain)

- 1) Display the full white pattern.
- 2) Turn the contrast control so that the brightness of video is to be about 5 Ft/L.
- 3) And check whether the white coordinate of video meets the above coordinate SPEC or not.
- 4) For the contrast control so that the brightness of video is about 20 Ft/L.
- 5) Check whether the white coordinate of video satisfy above SPEC or not.
- 6) If the white balance is off for the above SPEC, re-adjustment must be done. (Following above procedure again)

ALIGNMENT PROCEDURE

5. Focus Adjustment

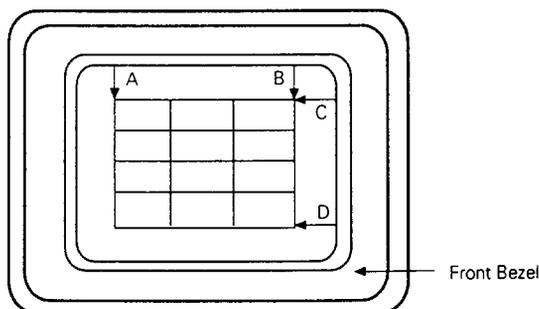

- 1) Display the character pattern so that adjust the focus can be done. (the highest resolution is recommended)
- 2) Turn the contrast and the brightness controls fully clockwised.
- 3) Adjust the focus control of FBT, so that the focus is to be at the best condition.

6. Purity Adjustment

- 1) Be sure that the display is not exposed to any external magnetic fields.
- 2) Ensure that the spacing between the purity convergence magnet (PCM) assembly and the CRT stem is $29 \text{ mm} \pm 1 \text{ mm}$
- 3) Produce a complete, red pattern on display. Adjust the purity magnet rings on the PCM assembly to obtain a complete field of the color red. This is done by moving the two tabs in such a manner that they advance in an opposite direction but at the same time to obtain the same angle between the two tags, which should be approximately 180° .
- 4) Check the complete blue and complete green patterns to observe their respective color purity. Make minor adjustment is needed.

7. CRT Tilt Adjustment

Reassemble the CRT with fastening screws so that the dimension A, B and C, D are separately equal.

8. Static(Center) Convergence

Switch the monitor on and warm up for 15 minutes. Operate the computer in such a way that the cross hatch pattern is displayed on screen. Convergence error should not be over than following table.

Position	Error In (mm)	CRT Dot-Pitch
Center	0.3	0.28
Corner	0.4	0.28

Proceed as follows:

- 1) Locate the pair of four pole magnet rings.
- 2) Rotate the individual rings (change spacing between tabs) to converge the vertical red and blue lines.
- 3) Rotate the pair of rings (maintaining spacing between tabs) to converge the horizontal red and blue lines.
- 4) After completing the red and blue center convergence, locate the pair of six pole magnet ring.
- 5) Rotate the individual rings (change spacing between tabs) to converge the vertical red and blue (magenta) and green lines.
- 6) Rotate the pair of rings (maintaining spacing between tabs) to converge the horizontal red and blue (magenta) and green lines.
- 7) Magnet position is 2 pole/4 pole/6 pole (from the front of CRT).
- 8) Don't rotate the 2 pole magnet because it's object is to adjust the purity.

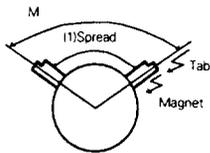

ALIGNMENT PROCEDURE

9. Dynamic Convergence

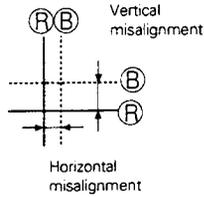

Dynamic convergence (convergence of the three color fields at the edge of the CRT screen) is accomplished by the proper insertion and positioning of the three wedges between the edge of deflection yoke and the funnel of the CRT.

9-1. Alignment of (R) and (B) with the 4pole magnet

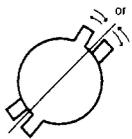

Movable in spread condition

TROUBLESHOOTING

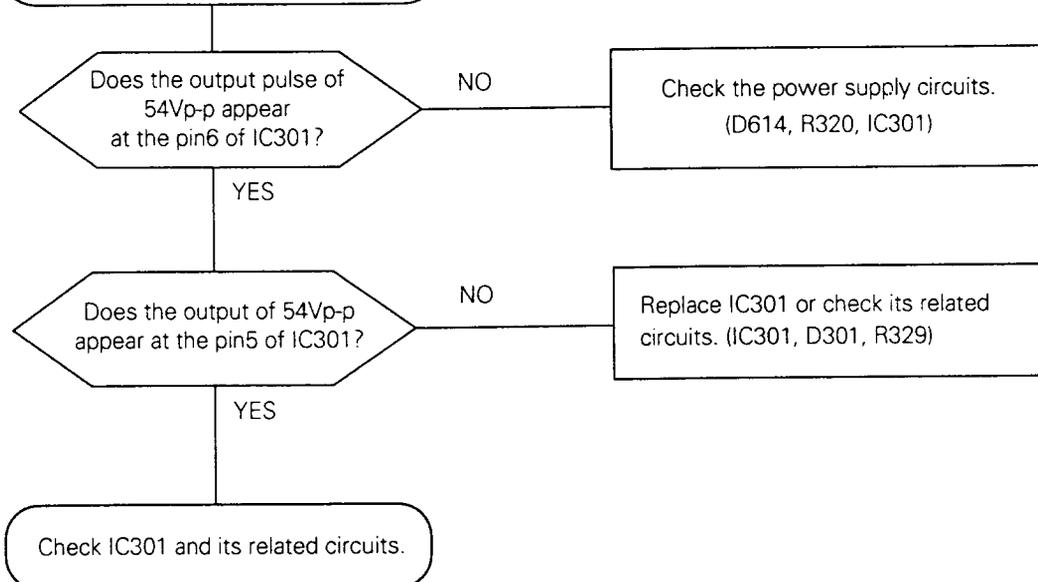

Note:

1. If picture does not appear, fully rotate the brightness and contrast control clockwise before inspection.
2. Circuit to be checked
 - ① No raster appears : Power circuits, Horizontal output circuits
 - ② A high voltage develops but no raster appears : Video output circuits
 - ③ A high voltage is not developed : Horizontal output circuits.

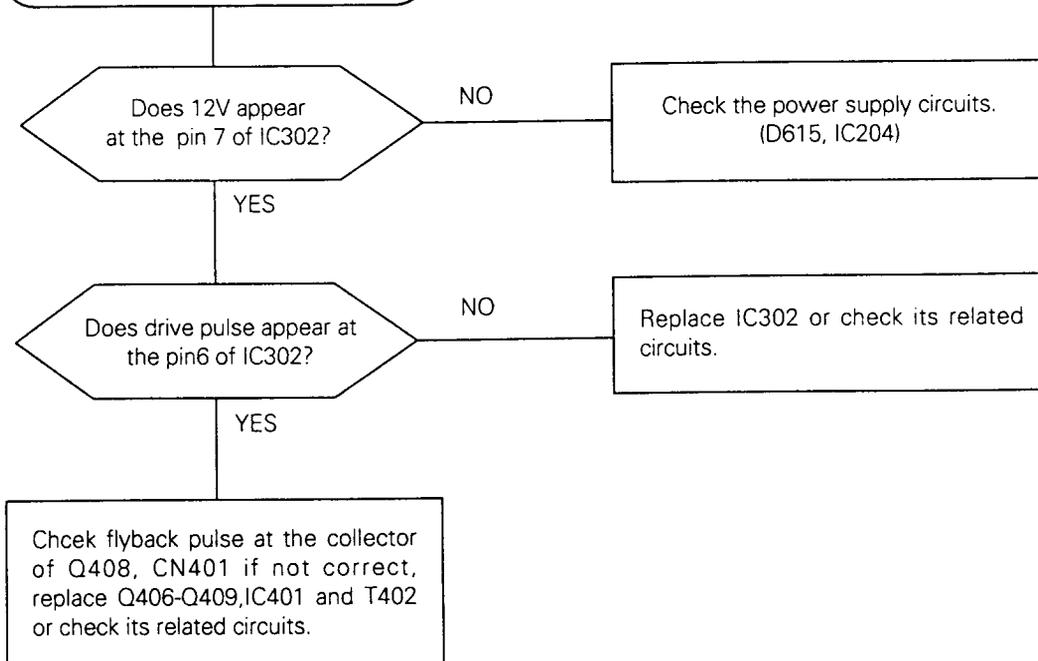

TROUBLESHOOTING

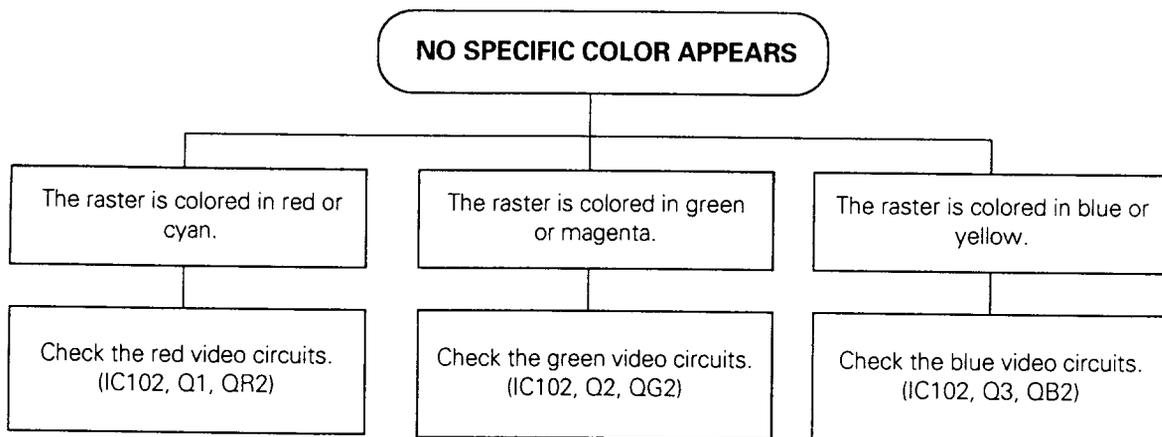

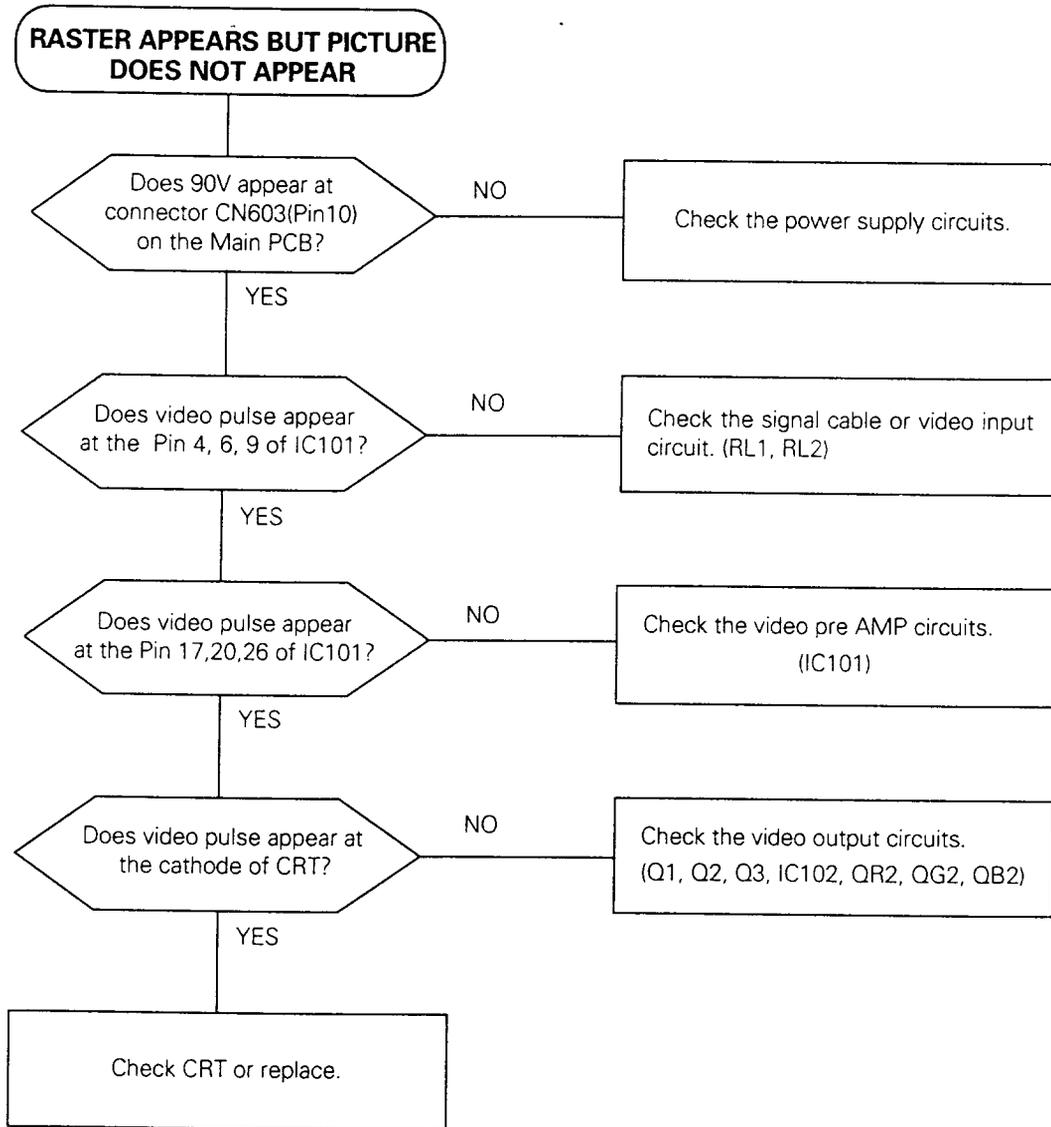

HORIZONTAL LINE ON RASTER

VERTICAL LINE ON RASTER

TROUBLESHOOTING GUIDE

TROUBLESHOOTING GUIDE

NO POWER

Does proper DC 300V voltage appear between the plus pole of C608 and the minus pole of C609?

NO

Check F601, D601, PTH601, LF601, IC601, SWITCH.

YES

Check IC602, IC603, IC605, Q604, Q607-Q609, R627, T601 and power circuits.

DOES NOT AUTO RECOVER

Does 8V appear at the cathode of D622?

NO

Check the power saving control circuit.
(D621, IC605, Q607, T603)

YES

Check the power saving control circuit.
(IC201, IC204, IC606, Q608, Q609)

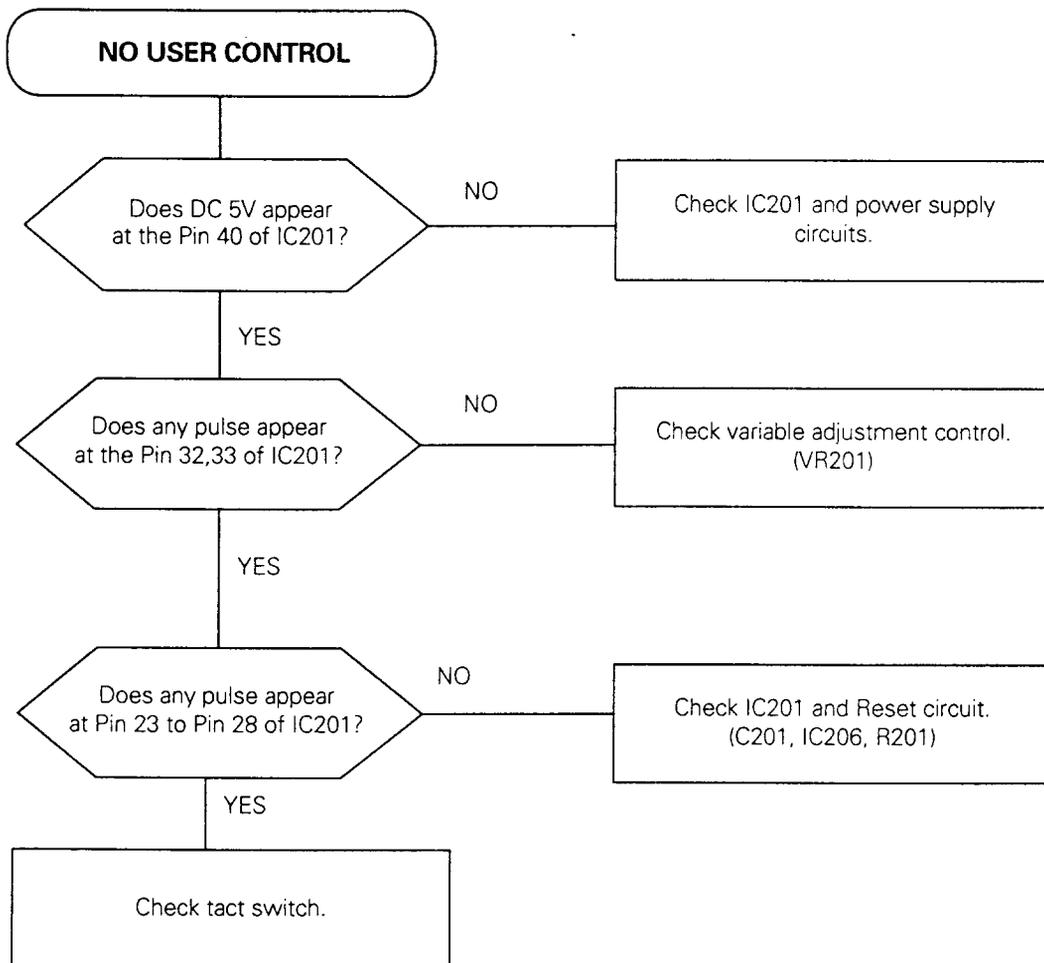

COLOR PURITY FAILURE

Check the connector CN602 on degaussing circuit, if OK, replace PTH601, RL601.

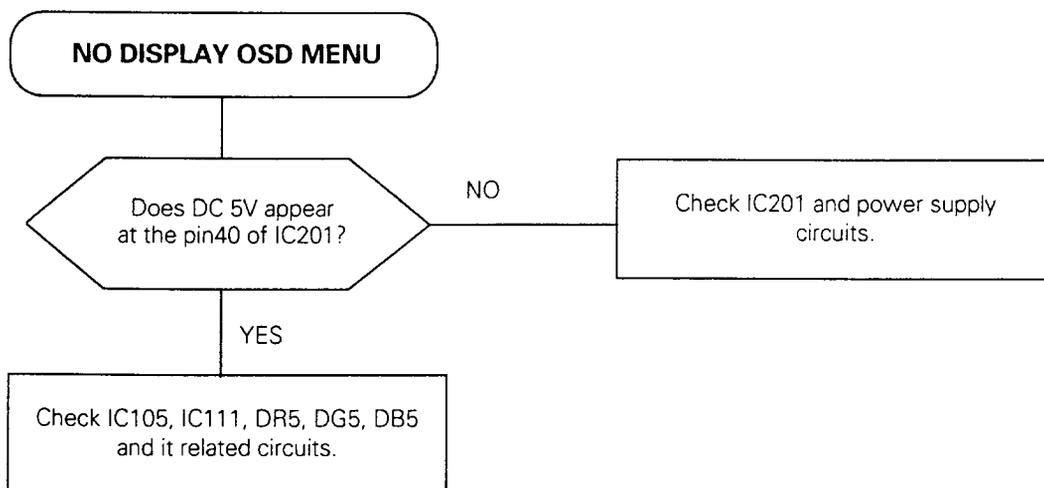

Switch the display monitor ON or push manual degause button and allow it to warm up for 30 minutes, then check the purity. If the purity is not improved, replace the CRT.

NOTE: If color purity is not normal, manual degaussing should be done by mandatory method using the manual degaussing coil before inspection.

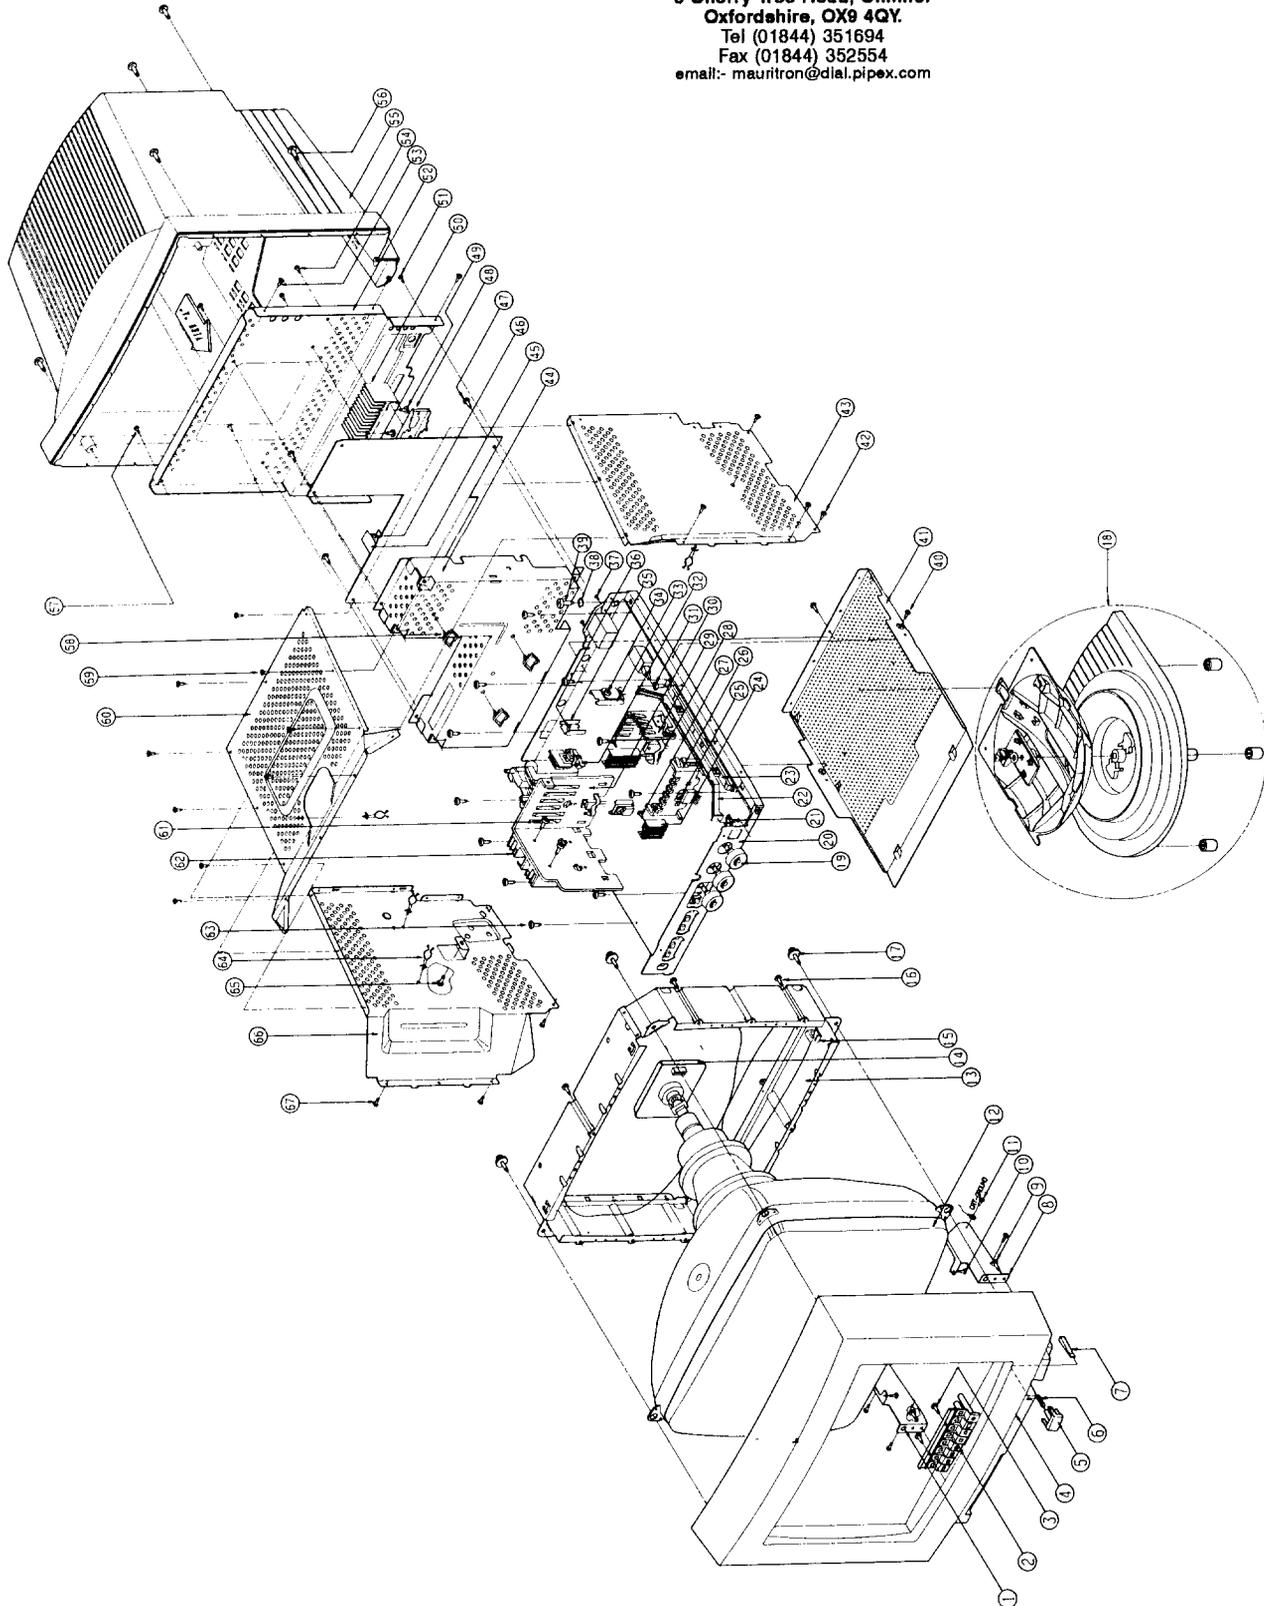

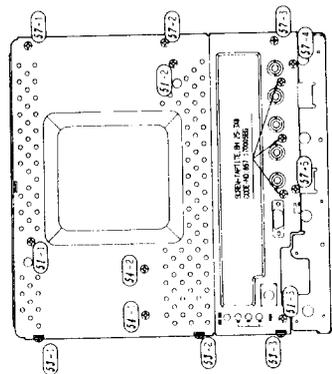

TROUBLESHOOTING GUIDE

Note: If save function does not operate, check IC202 (EEPROM).

CAUTION

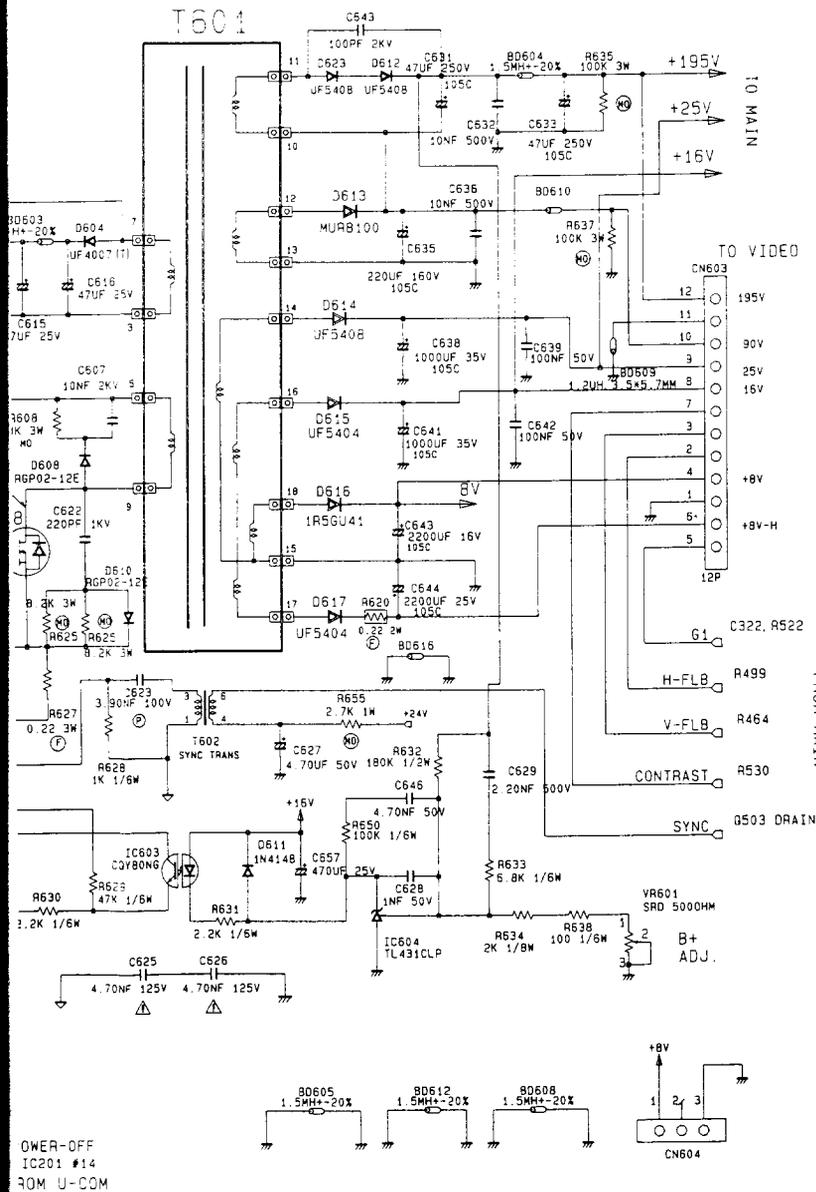

1. THE SHADED AREAS OR Δ MARKS IN THE SCHEMATIC DIAGRAM AND THE PARTS LIST DESIGNATE COMPONENTS WHICH HAVE SPECIAL CHARACTERISTICS IMPORTANT FOR SAFETY AND SHOULD BE REPLACED ONLY WITH TYPES IDENTICAL TO THOSE IN THE ORIGINAL CIRCUIT OR SPECIFIED IN THE PARTS LIST. BEFORE REPLACING ANY OF THIS COMPONENTS, READ CAREFULLY THE "PRODUCT SAFETY NOTICE".
2. DURING A NUMEROUS MEASUREMENT OF THIS MONITOR MATTERS THAT DEMAND SPECIAL ATTENTION IS FOLLOWING:
 - a) NOT USE YOUR INSTRUMENT BETWEEN PRIMARY GROUND (SYMBOL \oplus) AND SECONDARY CIRCUIT GROUND (SYMBOL \ominus) AND PRIMARY CIRCUIT.
 - b) THE SHADED AREAS ARE PRIMARY SECTION (HOT PART).

NOTE

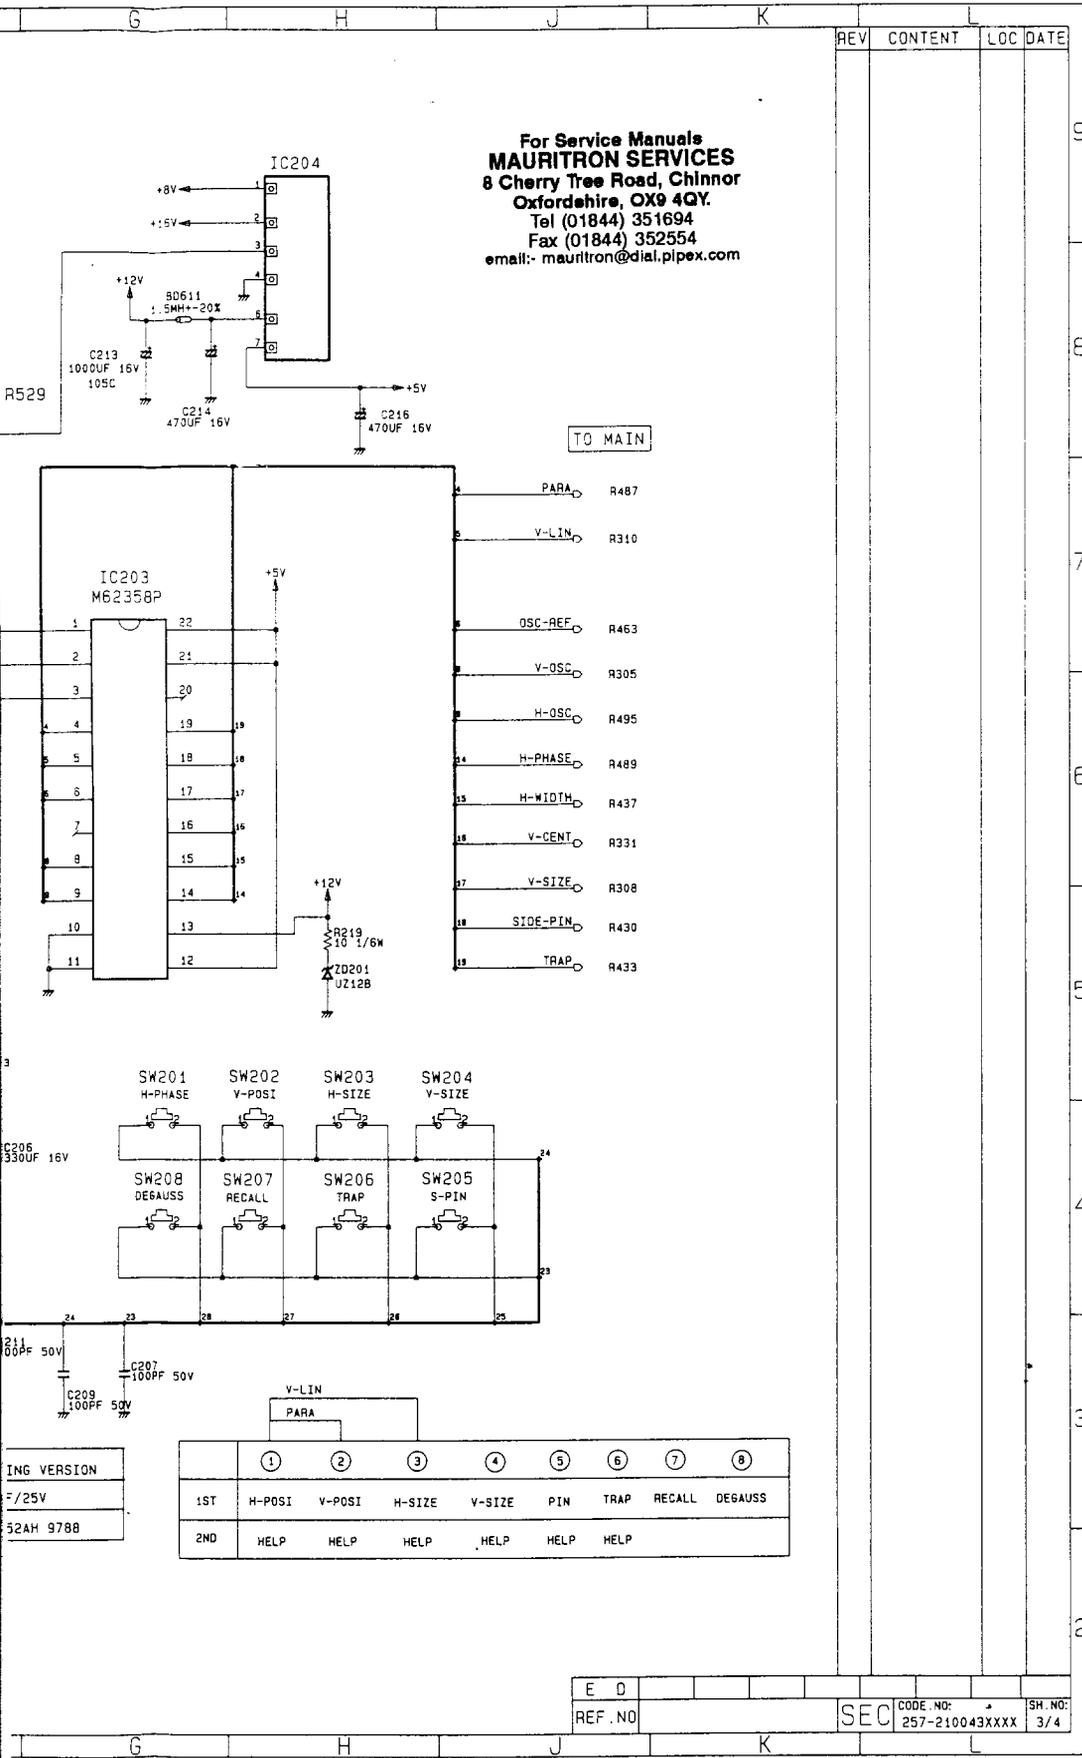

1. RESISTANCE IS SHOWN IN OHM K=1000, M=1000000. RATED POWER OF RESISTOR NOT NOTED IN SCHEMATIC DIAGRAM IS 1/4W.
2. CAPACITANCE IS SHOWN UF AND NOT NOTED CAPACITANCES IS SHOWN PF. UF=1000000PF. RATED VOLTAGE OF CONDENSER NOT NOTED IN SCHEMATIC DIAGRAM IS 50V.
3. ABBREVIATION AND SYMBOL

MO: R-METAL OXIDE	MC: C-MONOLYTIC

IMPORTANT SAFETY NOTICE

Component identified by the symbol  have special characteristic important to safety. When replacing any of these components, use only manufacturer's specified parts.

NOTE

- Tolerance : F; $\pm 1\%$, J; $\pm 5\%$, K; $\pm 10\%$, M; $\pm 20\%$, P; +100~0%, Z; +80~-20%
- Rated Voltage
 0J: 6.3V, 1A:10V, 1C:16V, 1D:20V, 1E:25V, 1F:35V, 1G:40V, 1H:50V, 1J:63V, 1K:75V, 2A:100V,
 2B:125V, 2C:160V, 2D:200V, 2E:250V, 2V:350V, 2G:400V, 2W:450V, 2H:500V, 2J:630V, 3A:1KV,
